Hold on there. My mentor, W8JK, wrote some mightly good books and is a heck of good person, but he did not "invent" radio astronomy. Before I worked with Kraus, I worked at NRAO in the vicinity of the second man in radio astronomy, Grote Reber (though I may have spelled his name wrong). Reber was a radio amateur in the Chicago area when he made the first RA map prior to the war. I have heard, first hand, about Reber's maps being published (a story itself) and then seen and developed by the Dutch who were in German camps durring the war. Kraus and Reber are good friends.
So, who then should get the credit as the first radio astronomer? He was the sickly son of a famous family in electronics who, as things were done in those days, was put to work outdoors investigating directional antennas. The Prof. has given you an assignment. It will be graded. Warm regards, Mac

P.S. In my era, radio amateurs did good work.
P.P.S. Kraus' book changed my life for the better.

So, you'll only deal with someone who is "serious about selling", that's
like saying you won't buy a used car from an individual, only a dealer. Or,
you won't buy a house from *anyone* since they only haven't sold enough
houses to be a "serious" house seller. Yes, it is safer to purchase from
someone who has a high and positive feedback rating, but you *still* can
have problems, even with those folks. Use your best judgement.

So what and where do HR back-packers do
their back packing? If CW meets their specific
needs, that is fine, but they don't need a code test
requirement to do that.

And it also covers the R&D to produce the product.
The incremental production of a CD-ROM disk may be
cheap, but getting the data prepared may be far more
expensive depending on the source. I'd hope that
all new ARRL publications are being prepared in
a format that lends itself to either direct archiving
on a CD-ROM, or involves only minimal conversion
from the original document production software to
an archive type such as PDF.

If that is done, then there is no significant additional
cost to go from print to CD-ROM. In fact, the new
Handbook should be prepared via computer based
word processing in the first place.

Cheers,
Bill K2UNK

2707. Re: Death Threats on Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-20 00:00:00 UTC
From: Kevin Alfred Strom <kevin.strom@innocent.com>
Message-ID: <3887A145.EC908213@innocent.com>
Source record: 120838

Death threats and calls for murder or assault are inexcusable on amateur radio. Yet they happen.

There have been documented cases of jammers threatening the lives of legitimate operators on 3950, the latest being from W9ART. And these threats aren't _implied_ threats -- they're direct and unmistakable.

W9ART's death threats, recorded in a .wav file, can be heard at

http://www.3950.net

by clicking on the link in the item about W9ART. His calls for murder are near the end of the recording.

In addition, by going to the audio archive section of the 3950.net web site, you can hear the jammers K5BLB and K5ZU calling for the assault and murder of other operators. Also, there is a recording of K5BLB and some of his associates not only laughing about a fellow amateur's anticipated death, but describing in scatological detail how they intend to desecrate his remains when he dies.

There is a certain kind of mentality that, unable to accept the fact that sometimes others have diverging points of view, or that sometimes others obtain use of a frequency first, that quickly escalates into illegal behavior including threats of violence or calls for assault or murder.

A lower-level variant of the same mentality shows itself with obscenities or crude and gross insults, often sexual in nature.

Sometimes that mentality shows itself on Usenet, too.

It is the mentality of the ignorant, the mentality of the thug.

It would be good if a license examination could be devised which would filter out such persons before they soil our bands, and perhaps if the right people could be convinced that more commercial equipment could be sold thereby, something might be done in that direction.

Of course, a restoration of the culture of the Old America would also go a long way toward solving the problem, but that is beyond the scope the amateur regulations.

With all good wishes,

Kevin, WB4AIO.

Abbreviations, Prosigns, Prowords
CW--Phone (meaning or purpose)

BK--Break; break me; break-in (interrupt transmission on cw. Quick check
onphone).

I was mistaken to use the term "prosign." The term I should have used
is "proword." Break Break must be a local use term.

Not that this is terribly relevant, but when I moved to
Texarkana, in 1980, The first time my wife and I went to the movies
we were stunned to see that Smokey and the Bandit was showing. I
asked the manager of the theatre, and he told me with some pride,
that Smokey and teh Bandit was still in its original run at Joys
Cinema 7 and soon they were going to be adding 6 more rooms so they
can put it on 2 SCREENS!
Longest year and a half of my career.

Hi;

One lot of (250) 9 pin miniature tube shields. These are for the
12AX7, 12AU7 ...etc tubes. Current bid is only $10.50 on the entire
lot.

I have seen these go for over $3.00 each on the net.

This is the last lot I will have up. I doubt you will ever find a deal
like this again!

Dan, on this one I have to disagree. Anyone who issues that kind of threat is committing a serious crime in the threat per se. That gentleman needs to be stopped.

In my opinion, Dan, to dignify the threat with the rest of the story is to give it legitimacy.

That simple mode of communication HAS SAVED many lives tho' - in the hands of operators and in lands where other more complex and expensive modes were not available. Even NOW, low power CW is an active mode used byHR back-packers. Far more efficient and basic - as well as economical in terms of power consumption, and thus portability.

> I currently posses a Class A driver license with Double/Triple
> Endorsements. They test you to see if you can operate a vehicle
safely

I *seriously* doubt you hold those driving license "endorsements" you NOW boast of - otherwise you wouldn't have made the following STUPID claim:

====
kf6foz wrote:

>>>There is only
> >> one driving test and one written test to take if you want to be a
> >> driver.
====

And THAT was the basis of my post - you know - the one YOU are now trying to evade...

AS far as code requirements - and their eventual effects on the "hobby" as we have known it in the past - guess it doesn't REALLY make all that much difference to old farts like me. By the time HR is REALLY kicking it's last, so will we - and the rest will be involved in whatever Internet has "evolved" into - it probably has already siphoned off the core of those who WOULD have otherwise possible become or remained active hams.

Thank God *I* won't have to see it - until recent years, HR has been pretty good for me - the electronics experience it provided help me excell in those aspects of my employment thru the years, and will no doubt continue to satisfy for a decent period in the future now that I have retired and have more free time on my hands.

The pity is, newcomers will never know or appreciate a similar
experience, or know Amayeur Radio for anything more that a mysterious
appliance to be used to talk to a few others using similar mysterious
appliances as they exchange "first personals" and "20's" as they
"shoot skip" on the new bands that have been opened to them.

Just to cut through the crud and acually answer the question:

As a ham all you do is throw out your call. "Break" is usually reserved just to break into a ongoing conversation for an emergency. If you wanted to join the conversation ,then simply throw in your call. There might be a few people say different , as I am sure there will be in this newsgroup. But I can gaurentee you that if you use this procedure, you won't have any one correcting you or giving you a sermon on proper procedure while talking on the radio.

Hope this helps , Woody

Let me relate a "good" experience on an e-bay purchase.

I purchased a Yaesu FRG-7 that was said to be in "mint condition".
When I received it 5 of the 8 dial bulbs were not working. Otherwise
it was in "mint condition". I e-mailed the seller about the bulbs
being burnt out. He said that they probably went bad during shipment,
but he agreed to refund $20 to cover the bulbs and labor. I spent $8
for the bulbs and 1/2 hour to open the receiver and replace them.

Ovreall I'm happy with the deal, eventhough I had to do a little work.
I guess I'm lucky that I was dealing with someone who has the integrity
to make good on a purchase.

Just my experience...

Kevin wrote in message ...

>Jeff, listen to 10.000 MHz sometime, especially in Asia, there is
>a lot of activities by marine and ham stations.

True. Listen in USB to 10 or 15 mHz during daylight hours
and spanish speaking stations "hiding" under WWV are
easily heard. This is an old trick of drug trafficers
and clandestine operations. You transmit to your inner-group
which are just a few miles away from each other, while
operating directly on the same frequency as a high power
shortwave broadcaster or other commercial station. Casual
listeners will hear just the Broadcaster, unless, the
clandestine stations propigate into the "shadow area" of
the broadcast station they are trying to hide beneath.
In this case they are often heard in-the-clear. This tactic
was commonly employed by the North Vietnamese Military
during the Vietnam war. We could occasionally hear them
but it was a clever tactic that is still used by stations
who which to hide by cammoflaguing themselves and their
point-to-point SSB. Again, take a casual listen to WWV
10 and 15 during daylight and you'll hear a dozen stations
daily on SSB operating with tactical callsigns and coded
voice transmissions in Spanish language. Wouldn't suprise
me a bit if they were drug trafficers.

That's only one factor -- it's hard to sell snow shovels in Florida at
any price. The reality is that the majority of buyers don't yet want
their books electronically, and price has little to do with it.

Proper protocol for breaking in on an emergency is "Break Break." The only reason I bring this up is that it is a "prosign" and has proper usage. We have this debate around here because people who are unaware of the "debate" here will invariably key up on the "RACES" repeater and say "break" to get into a conversation. They are always immediately reprimanded by people who don't understand what the heck they are talking about and tell them they were wrong to say "break" because it means an emergency. Break is a request or signal that you wish to join (or even interrupt) a conversation. You could also achieve the same goal by just giving your callsign.

No, you don't have lots of mental blocks. With few excepts code doesn't
come easy. Learning code takes time. But using the Koch method it is
really easy with with MorseCat Beta http://www.qsl.net/dk5ci/. Be sure
to get the beta version. Earlier versions of worst than useless!
Also read: http://www.hfradio.org/koch_1.html

If you haven't learned code at 5 WPM, then start at 13 WPM. You can
do it just as quick or quicker with Koch and MorseCat, plus you will
enjoy
it after you learn it.

>
> Must i use ULS? I hear it sucks

I didn't have any problem with it.

>It has been MY experience that going to a ham fest or swap meet --
>purchasing an item -- usually untested is almost the same as eBay

Not true. Almost all equipment can be tested at a ham fest or swap meet. If I see something I'm interested in, I ask for permission to take the item out to my car for a few minutes. If the seller is someone I don't know personally, I offer them cash in the amount of the item's selling price, in order to assure them of it's return. My vehicle contains everything I need for quick and accurate testing of radio equipment: antennas for the various ham bands; accurate meters for determining wattage, modulation, current draw, and frequency stability; plus quick power hookups for both 12-13.8VDC and 120VAC via an onboard voltage inverter. I can determine everything I need to know in less than 5 minutes. Not so for online auctions. You payeth your money and you taketh your chances.

If you buy at a hamfest or a flea market, you can find good
deals and bad deals. It depends on the honesty of the seller
and the common sense, knowledge and judgement of the buyer.
Ebay is no different.

I have both bought and sold on Ebay many, many times
over nearly three years. I can count the bad deals
on one hand and have fingers left over.
I sure as heck can't say that about hamfests.

In general, dealing on Ebay has given me a better attitude
about my fellow man. Now, there are crooks everywhere
and sooner or later you get "taken."
Also, some people tell the truth about an item to the
best of their knowledge and make honest mistakes-
like describing a military BC-348 with an AC supply
as being "unmodified-" he's not "lying;" it's an honest mistake.
The buyer should know something about what he's buying
and use good judgement, just like at a hamfest.

That said, the overwhelming majority of people
who sell radios on Ebay tell the truth and deal squarely.
And I've added many, many rare radios to my collection that
I would never have found in a lifetime of hamfests.
Some were cheap and some were dear, but I'm glad for all of them.

>reason I bring this up is that it is a "prosign" and has proper usage.

Procedural siganls (pro-signs) do not include "Break" or "Break, Break".
Pro-signs are meant for use in CW, such as "BT" (da dit dit dit da) which
actually signals a "break in text" (very commonly used as a period by many
hams)

>We have will invariably key up on the "RACES" repeater and say "break" to
>get into aconversation. They are always immediately reprimanded by people
>who don't understand what the heck they are talking about and tell them
they
>were wrong to say "break" because it means an emergency. Break is a
>request or signal that you wish to join (or even interrupt) a conversation.
You >could also achieve the same goal by just giving your callsign.

"Break" or "Contact" is used on HF SSB in some cases to break into a QSO or
a net (again... as you said, just your call-sign will do as well)

In our area (Detroit), using "break" or "break break" on most area repeaters
would earn you the same scolding you speak of. On almost all the 2m/440
repeaters here, "break" means you need the frequency NOW. Around here, to
get into a QSO, the best way is to just toss in your callsign at the
"tail-end" of someone's transmission. I'd say listen for a while or ask in
your area as to what proper practice is... it differs considerably across
the US.

I was merely making a comment on an earlier post, not on the original post.
The question of your callsign's vugarity or lack thereof is not what I was
posting to.
I happen to think it is not, but my original post stands--

I don't think that those hams, Extra or other, who engage in illegal
operation on any frequency are seen as being "icons" by more than a
small sliver of Amateur Radio operators.

The frequencies you cited are not in the Extra sub-bands...

salex@research.bell-labs.com says...
> That said, I was frightened by how little I learned preparing for the tests
> and how little use I expect that to have

I agree that the actual knowledge needed for the initial tests is
lamentably small. The Advanced (4A) and Extra (4B) elements do test
technical knowledge; 4A is actually a fairly stout test if you don't work
professionally in electronics, and take the test in good faith. (That
is, work the problems, don't memorize the answers).

> As to the texts, I picked up a text, somewhat on a whim at Radio Shack
> while I was looking for something else. I was appalled to find out that it
> had the list of questions with answers and brief explanations. I had
> expected much more general information to fit the pieces together.

I was always disappointed (even before I took any of the elements)
that the tests were multiple choice, and that the question pools were
available in their entirety to the public. After the FCC's restructuring
announcement, I suggested to the two VECs that I am associated with that
multiple choice testing should be replaced by fill in the blank, or that
the question pools not be public domain. Alas, it doesn't look as though
that is going to happen.

> Ultimately, I guess I believe the most useful test would consist of being

> traditions and practices of amateur radio.

I agree that some kind of practicum would be an excellent idea for
the higher class of license. Your first idea has a lot of intellectual
merit, but I fear that it would raise the bar higher than would be
necessary for licensing. After all, commercial licensees don't have to
pass that kind of standard. It makes little sense that amateurs should.

> A final note: While my goal through all of this was telecommand and
> telemetry, my interest was piqued enough that I've started thinking about
> buying a rig and upgrading my (soon to be) license.

Everybody has different interests, and the hobby is big enough to encompass all of those interests. My original goal was to get on the HF phone bands so I could get real-time practice with foreign languages. I have discovered that I very much enjoy rag-chew QSOs using medium speed CW, and 90% of my air time is spent on the CW HF subbands. (With very little time spent on the phone bands, and even less using my decaying language skills.)
Restoring old radios has become another pursuit, and in the future I would like to get involved in the microwave bands, work with spread spectrum technology, and perhaps EME some day. All have their aficianados, and all enrich the hobby.

> So, even for those
> who want to preserve the traditions of amateur radio, you might consider
> how many are being kept away by the seeming insularity of some of the
> requirements at the same time you count the number of CBers who will be
> taking over the airwaves.

Some (many?) bemoan the fact the the telegraphy requirement is being reduced because of the loss of tradition. In the end, it is not the FCC's job to structure regulation to maintain tradition, but to create a pool of part-time radio operators and hobbyists who will "advance the radio art." I suspect that if the ITU did not mandate testing telegraphy for access to the HF bands, that the FCC, and most other national regulatory agencies, would not require it for licensing.

I don't think so. I'd give $100 for all the issues of QST
(even excluding the ad pages) if they were available on 10
CDs. Same for Ham Radio Magazine on CD. But not >$300 each.
The new handbook on a single CD for $20? New Antenna manual
for $15? Yes, anytime. But those prices aren't here yet, and
Nope, its just not that large a priority to spend the
current amounts on them, where they're available at all.
If your statement reflects current League thought, a poll
testing the potential market might be in order. I think the
buyers are there if the prices were more attractive.

That is exactly what I'm trying to determine. Is it a "legitimate"
threat? Or, as most likely, a figure of speech that was mis-
interpreted. Or at worst a heat of the moment comment. What makes the
difference in a utterence of such things is if any action is taken, or
if
there is a reasonable chance action is able to be taken. Catch my
drift?

Hi, Will,

I think the changes willlead to a long-term decrease in CW use, for a number of reasons. If I remember, 5 wpm was, to me, a stepping stone to ultimately develop 13 wpm proficiency. If, the day I first passed my Novice, I had a choice of using 5 wpm or getting on 75 M and 20 M phone, I would have certainly picked the latter. Without that 13 wpm test hanging over my head, I may not have used CW much at all. Once I got past 15 wpm, it became a lot more fun.

Having said that, however, I will add that CW will still attract some new users, I think; what makes the mode useful is NOT the testing that was done, but, well, the factors that make the mode useful. The level of activity will be at CW's natural level, much like RTTY, PACTOR, SSTV, etc., is at a level that is determined by the wishes of the operators using it.

Granted the Masataka-style pronunciation of elections is amusing at
first, but what is it with hams that they turn a newsgroup into a
anatomical discussion worthy of a junior high school ?

I find this on very few newsgroups.

The same people so very worried about "saving" ham radio from old farts
and recruting young people by dropping code requirements are the same
crowd who would cause any parent to shudder at the prospect of their
child spending 1200 dollars to talk with such people.

Of course, given the language used, perhaps such people have a hidden
agenda for wanting younger hams....

Gary,

Your facts are a bit flawed. In the State of Florida, a 70 year old man, driving a converted greyhound bus that is disguised as a motorhome, towing a Chevy Suburban only needs an operators license, the same class as Joe Average who drives a Chevy Lumina to and from work.

2751. The "real" revised FCC test...

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-20 00:00:00 UTC
From: fdecker@aol.comNOSPAM

From the Canned Ham:
==========

Once again, prevailing thought has called upon the canned HAM to respond. In light of the recent FCC testing requirements changes, those self appointed to protect our rights have used the airwave soapbox to decry the injustice of it all. A recent satirical "test" was passed around, but the CannedHam used his ample snout to root out the "real" test and found this ripe truffle. He presents it here for your pleasure:

FCC EXTRA CLASS LICENSE EXAM

1. A change long lobbied for is announced by the FCC, do you:

a. complain miserably on every band for which you have access
b. stock supplies in preparation for the obvious end of the world
c. make sure everyone knows how hard things were when you first became a ham
d. all of the above

2. Proper testing procedure should include:

a. the ability to solve a triple integral equations and fourier transforms
b. the design and construcion of an entire HF rig using tubes
c. the ability to send 30wpm cw using a foot paddle while standing on your head
d. all of the above

3. The FCC moves to another letter in sequence denoting new hams, you must:

a. Listen for the new calls and let them know how long you have been a ham and that you are a higher class
b. Coordinate with your buddies to not respond to these "appliance operators"
c. Make sure to "educate" all the new calls as to the proper procedures of being a HAM according to you
d. all of the above

4. When you received your license it also gave you which rights?

a. omnipotence: your opinion is always right and there is no room for other, obviously wrong, views
b. your fringe interest such as QRP, CW, ATV, APRS, etc. must be imposed on others
c. to post and say controversial or extreme views and expect no dissention or debate
d. all of the above

5. HAM radio should always maintain the same set of rules since Marconi because:

a. You had to do it, so should everybody else
b. We wouldn't want to ruin the neighborhood by letting all those lazy CB rejects into the hobby
c. You can't possibly be a good HAM radio operator without an EE degree and 20wpm code skills
d. all of the above

6. A good way to assert you opinion is to:

a. say and write vile right wing diatribes but laugh or put a smiley on it and say is is a "joke"
b. hang out only in groups of people who believe as you do to reinforce your opinions
c. let everyone know that it is not an opinion, but rather a fact and only an idiot couldn't see that
d. all of the above

7. The HAM radio motto is:

a. intolerance, self-righteousness, arrogance
b. exclusion, close-mindedness, bitterness
c. conservatism, the Klan, the NRA
d. Veni, Vidi, Vinci

8. The recent "proposal for change" in rulemaking has asked for the following:

a. reciting 500 memorized stories, chants, and formulas in a dark, candle lit room to 12 hooded elders
b. electric shock therapy for any question missed regarding Q signals or pro-signs
c. skills test showing the ability to solder 50 surface mount components in 5 minutes
d. proficiency in setting up a remote mountain top station using magnet wire, chewing gum and burlap

9. The proper way to maintain your skills as a HAM are:

a. troll newsgroups and nets to learn clever catch phrases like "appliance operator" and "codeless tech"
b. get on 2m repeaters and use Q signals like "QTH" and "QSL", and terms like "ROGER" and "OVER"
c. put down others so that you can appear to be above them without actually having to elevate yourself
d. all of the above

10. When you first became a HAM radio operator

a. You aced all exams without a missed question, could send 30wpm CW, and built all of your own equipment
b. You had to walk 20 miles in a blizzard, at night, with a broken leg to take your tests at the FCC office
c. You didn't have to worry about those damn parasites that didn't have to pass a code test
d. Marconi was still a Novice

The "Canned" HAM

I'm looking for a schematic for a TV oscillator kit like Edlie Electronics sells. It scrambles channels 2 thru 13 when you tune it to the correct frequency. Edlie has a $25. minimum, and the only thing I need is the one kit for 7.95. Thanks in advance!!!

Joe
> Average who drives a Chevy Lumina to and from work.

(SIGH!)

Some of you diehards will go to EXTREME extents to evade an issue!

SO tell us - are YOU saying that nation-wide, there is ONLY a SINGLE
written and driving test, no matter WHAT type/size vehicle you plan to
operate?

THAT, and ONLY that was the disputed point! It was CLAIMED that a
SINGLE driving/written test was "all that's required to obtain a
driver's license" And *I* pointed out that was NOT TRUE, that
DIFFERENT tests ARE required for differing vehicles and applications!
YOUR minor example - which in ITSELF does NOT apply in ALL states, is
a mere juvenile evasion of what the basic POINT was to begin with!

SHEESH!

FS Collins KWM-2 (RE) transceiver, 516-F2 power supply, 136-B2 noise blanker. All in near mint condition. Late model round emblem with plug-in relays. All original paint, no mods. Works great on all bands (used on CQ DX contest). Eveything near mint except small scratch on trim ring, replacement power cord. Includes original manuals for KWM-2, power supply, reprint for noise blanker. Don't miss this one. $1075. Chuck, W6CAB (831) 688-0785.

Several times recently I find myself in complete agreement
with Dick about something. It's scary. :-)

Anyway, I agree completely with what Dick is saying. As
long as the CDs are priced as high as they are, I'm going
to think long and hard before buying them. But if the price
were down in a more reasonable range, I'd buy them in a
heartbeat instead of the paper copies.

Yes, they would, and they'd make a larger profit too if the BMW
cost less to produce than the Escort. That's the case with CDs
versus paper books.

>Your answer is oversimplistic (or maybe you don't understand

I took marketing courses in college. I know how to calculate a
min/max solution containing a number of constraining equations.

>Pricing models are based on several factors, only one of which is
>demand elasticity.

I understand that it is cheaper to stamp CDs than it is to print
paper books. And I understand that having a reference work in
computer searchable form is very attractive. But I also understand
that I'm not going to pay a multiple of the paper book price to get
it, and apparently not a lot of other hams are willing to do that
either.

It sure is easier to say "break" than
Dou-ble-U-dou-ble-U-se-ven-dou-ble-U-dou-ble-U-dou-ble-U :-)

> In our area (Detroit), using "break" or "break break" on most area repeaters
> would earn you the same scolding you speak of.

I've always used "break" over a repeater. One ham told me that, "We don't
do that", and asked how long I had been licensed. I said, "48 years, and
'we' indeed *do* do that." :-)

No, it costs less to DUPLICATE CDs than paper books. When volume is
large, that particular cost dominates the cost side. When volume is not
large, that cost may very well not dominate.

>>Your answer is oversimplistic (or maybe you don't understand
>>pricing models).

Without data? Because as far as I know, you have no specific market
research data covering this issue upon which to draw.

And a lot of hams aren't going to buy it even if it costs less than the
paper book. That's what our data shows.

Perhaps the situation could be resolved by simply pricing
the books and CDs at the same percent above cost. I suspect
the percentage markup on the CDs is many times the percentage
markup on the books. I suspect that if the percentage markup
was the same, the CDs would always be the best deal.

Break is what I was taught to say years ago, or your call sign , saying contact seems to be more acceptable now days , I think it is more pressure not to sound like 11 meters , like saying 73's , or anything faintly that resembles CB,I would imagine that on 2 meters ,maybe a lot of folks that scold about it have never been on HF, my apologies about the language , but normally I am not to tolerant of verbal abuse and the logger tends to come out !

About buying radios on "e-bay"...
Well - I found it a bit of a ripoff, myself, and if you just shop around, you'll likely find better deals - for NEW equipment, instead of used, along with their complete full factory warranties! -

I was interested in buying a shortwave radio late last fall, and thinking I would get great deals via auctions, I signed up with e-bay. The shortwave radios I desired, after much research on quality and prices, was either the Grundig YB_400PE, the Sangean 909, or the Sony 7200(?). I found myself in the bidding frenzy, noticing that there are those that do their majority of bidding within the last minute of the sale - and was greatful, after seeing how much money I was going to spend - that I "lost" the bids! I also noticed that the bidders were paying nearly as much - or even MORE than the original lower-end retail prices!

I ended up going over to NetMarket, and became a member - so I could get my YB_400PE as "refurbished", with full factory warranty, paying only $120.00, plus $6.95 s&h. The radio came with ALL of its the original factory extras - and I'm happy as can be with my Grundig! Meanwhile, while waiting delivery, I went back to E-bay to watch the bidding - and observed people bidding higher than my NetMarket price, for the same radio, used! (BTW, I had the option of quiting NetMarket within 3 months, before having to pay the $59.95 membership dues - which I did, because I only wanted the radio.)

Last year I also bought a "CCRadio", reputedly the strongest AM receiver (which I fully beleive, after using it for many months, now), as a returned "orphan", from the C. Crane Co., who makes this radio in partnership with Sangean. Their retail price is $149.95. I called their 800 number, asked if they had any returns, and bought one for $129.95, p&h included, with full warranty. On E-bay I watched this same radio, used, go for almost the original retail price!

So it shows that spending a little time researching and inquiering you can probably save MUCH more than the "bargains" you can get from E-bay... I guess it's because you don't compete with the bidding frenzies... I thought it

weird, anyway, that E-bay says you "win" if you out-bid the
other bidders - which makes it seem like its a "prize" that
you can fork out your dollars for whatever it is you "win".

Hope this helps... ZiaDog

Hi, Gary,

Speaking a bit out of turn, the reproduction costs (printing/duplication) are only part of the costs of producing a publication. Author fees, editing, graphics and production all enter into it as well. Even if reproducing the CD media were free, the rest of the costs need to be considered as part of the pricing decisions. In the case of books about Amateur Radio, the market is not as big as it is for "Windows for Dummies" or other such popular book.

In the CD products, there are additional costs involved, in setting all the internal linkages, the search engines, adding the software and template packages that also go into the product, to say nothing of the fact that ARRL has never had to spend staff time offering a customer support when he is having difficulty opening a book.

Kim, how'd you end up with the call w5Tit, was w5ASS already taken?

As far as making ham radio better, we were working on that. But the FCC, with ARRL support, chose to dumb-down license requirements instead of improving them.

2767. WANTED: Motorola Spectra - GX - Maxtrac help

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-20 00:00:00 UTC
From: Chris <meadowcomm@erols.com>
Message-ID: <86830a$e3i$1@bob.news.rcn.net>
Source record: 121028
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.misc

Hello All - Looking for help on modifying the radio or the software so that I can program the Motorola 900 Mhz Maxtrac B7 - Spectra - or GX trunked radios for ham band useage.

The software I bought from Motorola will allow me to get the rigs to do conventional mode, but althoguh the freq range is from about 896 - 941, I can't get it to do thr ham freqs.

Any help is appreciated.

73 de Chris

2768. VA3GJB,Confirmed Illegal Operator and Usenet forgerer

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-20 00:00:00 UTC
From: mr__cracker@hotmail.com
Message-ID: <38878DB2.FC9189C7@hotmail.com>
Source record: 121029

For those of you wondering what HF privileges VA3GJB has earned, I submit a copy of a reply the Honourable John Manly e-mailed today. Canadian hams with the Basic endorsement with 5wpm are under a different bandplan than Canadian amateurs with 13wpm endorsement. After looking at the RIC2 pamphlet in Adobe format, I noticed that VE3GJB is not allowed any phone privilege on twenty meters whatsoever. Pretty astounding when you realize that he was one of the active stations on 14.313/14.300 for the last four years. And is still active there now. He has phone on 75 meters, but only at the 200 watt level.He has described his power level in detail, and it is always 1K plus. And if that is not galling enough, he has made several posts to usenet posing as David Tolassi, KC1ZQ, with his Interlog Internet address right in the header. All these posts were insulting and libelous, and were calculated to fan the flames of controversy on 14.313, a frequency that he was operating illegally! For an individual trying to ease the tensions on twenty meters between the two groups, his behaviour is bizarre indeed. Anyone with information regarding the illegal HF activities investigation of VA3GJB is requested to contact the Honourable John Manly or the Honourable Hubert Pambrun, Industry Canada. Maybe if the Goodfellows Amateur Radio Group would stop such libel and HF bootlegging, the conflict will stop.

Dear :

The Honourable John Manley has asked me to reply to your email of December 17, 1999, concerning the operating privileges of a Canadian amateur operator, Mr. Graham Dyer.

Industry Canada's publication entitled "Standards for the Operation of Radio Stations in the Amateur Radio Service - (RIC 2)" sets out the frequency bands within which Canadian amateurs may operate in accordance

with their qualifications. This document can be found on our Internet site at : http://strategis.ic.gc.ca/SSG/sf01372e.html#RadiocommunicationsInformationCirculars.

Following verification of our records, I would like to inform you

that the data found on the RAC web site regarding Mr. Graham Dyer is accurate. Mr. Dyer has the following qualifications: Basic Qualification

with Morse Code (5 w.p.m.).

Therefore, in accordance with the above mentioned document, a Canadian amateur operator is allowed to operate below 30MHz as specified in
Schedule 1 of RIC 2.

Thank you for bringing your concerns to our attention.

Yours truly,

Jan Skora
Director General

Radiocommunications
and Broadcasting
Regulatory
Branch

c.c. Hubert Pambrun
Ottawa District Office

c.c. Riley Hollingsworth
S.C.A.R.E.

I think it would change, too. I built a 'slim jim' for 2m with
ladderline, tuned it carefully, then decided to put it in a piece
of grey PVC tube for rigidity. It needed re-tuning.

I think the type of PVC is important, here. The white and red
seem to be OK but the grey stuff varies. Some has carbon as a filler
and this may be the cause of detuning noted.

Cheers.

2772. HAM vs HAM or Point Counterpoint.

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-20 00:00:00 UTC
From: Dan/W4NTI <w4nti@my-deja.com>
Message-ID: <865llg$1b2$1@nnrp1.deja.com>
Source record: 121110

Ham vs Ham or Point Counterpoint.

It seems to me that there is a lot of useless bickering going on these days about "who has the bigger and better license". You all do, or should, realise that this is exactly what incentive licensing caused in the first place. For those that don't know, allow me to explain.

Back in the late sixties a thing called "Incentive Licensing" was imposed upon amateur radio. I am not going to get into who did what to or by whom. The bottom line was that the "old school" of hams pushed through a program to force you to upgrade. Some of us even LOST frequencies, after earning them in the first place.

This whole fiasco caused, what I call, the caste structure of ham radio. We are still living with it today. And seeing all this bickering and complaining about "welfare general's, welfare extra's", etc. Proves my theory is correct.

This recent episode by the ARRL and FCC is a case in point. The FCC basically disregarded most, if not all, of the good propasals by the ARRL and implimented the modern day version of incentive licensing. Example, the ARRL wanted the Novice dropped, and the frequencies "re farmed" to other purposes. Such as moving the phone bands down a bit more. The Novice was removed, but no freq's were added.

The Tech and Tech plus will now be one. Just like it used to be, without the CW. No problem with that. The advanced get shafted and should be grandfathered. This didn't happen either. You ask why is that? Simple, the Advanced is the more difficult of all the written tests to date. The present Extra is far easier.

Now let's discuss the old days Extra. Back in the "good old days" 20 words per was just that. Solid copy, on paper, for one solid minute out of five. And the written of the day was considered equivelant to the first phone commercial. At least that is what I have been told. And of course all of this was in front of the FCC. A trip to the FCC field office usually consisted of missed work, a hotel stay, and sheer mental exhaustion.

What I'm saying is that the post FCC tested Extra with the multiple guess morse code questions and the VE system is a totally different thing from the old extra tests. So if you insist on making a comparison, you need to go way back to the FCC tested guys. Which

of course means we are far superior. Or are we? Of course we are not superior. At least that is how I feel. In fact anyone that thinks they are a superior ham just because he has a "old time Extra" is a total fool. I spent most of my life in state of the art electronics repair. And you know something? I don't think I could pass the modern Advanced and Extra test right now. And I'll bet a lot of you "hollier than tho" types are in the same boat.

As for morse code qualifications making one a better operator... no way...it just makes you better on cw than average. Of course considering how dead the cw bands are, unless their is a contest, shows me most folks don't use it anyway. I don't unless there is a contest, or a dx station I want. But its not because I don't enjoy cw. It's because I have a lot of trouble finding anyone to finger talk with at a reasonable speed. And what does that tell me? CW is basically history, bury it as a license requirement. Make it a endorsement to your license, if you want it. Give the CW boys 50 kc and be done with it.

Now to the point of this whole thing.....Lets stop attacking each other and eating our own. Lets concentrate on HELPING your fellow amateur, even if they are just a Novice or a no code tech geek (gasp). And let's make a special effort to attrack some youngsters into the Amateur Radio Service. Show them the ropes, and help them like we used to do. And above all when these "hordes" show up on our "private" frequencies, lets say welcome to ham radio.

As I put it in another string...

"Those "20WPM Extras" that are icons of Amateur Radio legend have given
us underlings a good education on how to act
on HF by putting these practices on display on 3898, and 14313 and
other pompous sections of those elitist bands. I as a
no code tech that passed his advanced, and almost passed the extra
written when I tested for my license will be looking
forward to talking with all my dear friends on HF while I use fowl
language, discuss the intricacies of trailer trash, tell cat
killing stories, and work the actions of my firearms, as I have heard
all of you fine examples do for years. I salute you in
your pursuit of Amateur Radio excellence, and hope to join you soon.
Even now I am studying up on my code, and it will
give me another use for the best CB I ever owned. An Icom 706 mark 2!
Two meters, 6 meters, and CB all in one box. Life is
good!"

I read you loud and clear. I'm getting my upgrade. Don't let those
horses arses get to you. Branch free family trees create those kind of
people that you heard on HF, but there are a lot of nice people to talk
to and nice places to go on the band to get away from that junk.

Here is another jem I wrote. It kinda makes the same point.

"My fellow hams.
Since you insist on arguing, allow me to throw some gas on the fire.
I too am a nocode tech that has a distaste for the ARRL because they do not represent my views. I'm sure that not all of your views are represented by the league either. The league in one way or another is run by crotchety old men and stuffed shirt cw loving young punks that look like a reunion for the revenge of the nerds, that use morse as a method of measuring a hams worth and beating all the rest of us to death with it. I know for a fact that there are lots of technically inclined individuals that either are in ham radio as nocode techs or are not involved at all because of the evil specter of morse.

We have a couple of older hams around here in some of the local clubs that have been teaching classes to become new hams and to upgrade licenses. No offence, but these guys are hard to understand and boring as hell. I appreciate their efforts, but they were chasing off prospective hams. I offered to teach the theory part of the classes, and to tutor folks to pass their Advanced class license theory, and was flatly refused by two clubs that I belonged to. It was not a case of they did not need the help, but they did not want to have a nocode tech teaching the class. I'm pretty good at putting complex issues in simple terms while maintaining the interest of the group, and it's really sad that they were that vain.

I've worked the VHF contests, I've went to Dayton once (they almost had to shackle me and haul me there), I've worked the field days and emergency events, and I could never seem to get away from the holier than thou attitude that permeates the amateur services. There were all kinds of things that were a pain in the butt that were a result of the twisted thinking of some of the hams. Here are some examples.
*What good is an autopatch that you can't make calls on, even if you pay to be able to use it?
*What good are traffic nets where no one wants to deliver the messages? Erie,Pittsburgh,Cleveland,Buffalo
*What good is it to break a repeater for emergency services when the hams cannot relay accurate information in a real emergency? (These guys were advanced's and Extra's that were brain dead.)
*What good is it to take any ham radio with you on a trip and politely ask for directions in a neighboring city, and be ignored. (I finally talked with another ham from out of town on that repeater and proceded to trash the integrity off the hams in that city. They then spoke up and defended themselves and I found out that they did not want to help me because they thought that I was a trucker trying to deliver a commercial load. I was not a trucker, but the truckers did help me on the CB. I now never leave home without one.)
*What good is field day if so many other hams are not allowed to operate HF. That means that it is one or two days of work to set up, and then one or two to tear down and I didn't even get to operate. Then you have the balls to wonder why your turnout is so low.
*There are a few self appointed gods of amateur radio that have picked

fights with the outside community, such as emergency services, commercial radio, CB operators (real bad idea), public events, etc...

All in all, I hope that all the warring factions in amateur radio kill each other off so that those of us who want to use it and enjoy it for all it's worth can do so in peace, and without some holier than thou busy body making and issue of everything. This is supposed to be fun.

After all of you die hard code fiends are dead and gone, or at least in a small minority, I look forward to the day that I can talk on HF with my fellow hams, burp, pass gas, work the action of my firearms on the air, and tell cat killing stories (Like those on 3898 and 14313) without any more grief from the sticks in the mud.

KLOD"

It's not just you that has had enough. Well I better get studying. I also have to figure out what my vanity call will be. Maybe AHzeroLE.

(;o))
The ARRL is K0HBs G-d,
He shalt not want,
Their Rod and staff confort him,
They preparest a dumbing down of Hamdom,
In the presence of a cadre of experts,
And anointith their heads with nothing.
Their modulation percentages runneth over,
Surely CBers and sheep will follow them,
All the days of the next millenium
And they shall dwell in a house where the
RF hazard lever is exceeded.
E-men...(Extras that is).

If things continue as they will be after April 15, 2000, ALL HAMS WILL BE EXTRAS in 10 years but simply passing a 120 question multiple choice question exam from a fixed Q&A pool. The ITU will eliminate the 5 wpm HF requirement. Did you ever doubt? If as you state above all Extras will dead then Ham Radio will be dead as well.

We don't need "Tech Plus" Hams any more BUT now we need we need "Extra Plus" Hams to form a cadre of experts and advance the state of the Radio art.
Hams need MORE license classes,

The different driving tests are there to be reasonably assured that
people are qualified to handle various kinds of vehicles safely.
Being able to do code at 13 or 20 wpm doesn't mean you can operate
your rig more safely than someone who only did 5 wpm.

Additionally, other than slices of frequencies,
there isn't much that an Extra can do that a
General or Tech can't. Now if you had to
be Extra to run high power that would make
some sense.

Cheers,
Bill K2UNK

The issue of the Liberty Net has also been on the Tom Valentine show Stan Solomon SHow and the Intel Report. The issue is the moronic jammers.If you dont like what a group is discussing go somewhere else.

Local hams need to locate jammers, doccument what they find out and make vigerous complaints.These moron need to be off the air.

The moronic content of the silly page which was posted above is representative of the moron jammers who need heavy fines and revocation of their tickets

Your still not making your point. What a driver does can kill a
person. Morse code has never posed a threat of killing anyone.

I currently posses a Class A driver license with Double/Triple
Endorsements. They test you to see if you can operate a vehicle safely
on all parts of these test, meaning if you can drive without causing
accidents or killing someone.

Morse Code test your ability to perform the actual mode. No one will
get harmed or any accidents will happen causing injury. People need to
stop comparing code test with other test since there is no comparison.

When morse code becomes a threat to life, then make your complaint.

Now who's full of it?

This debate over code is getting old and noone ever makes complete
sense when trying to explain it.
Do like I am going to do. Go pass your code if you want it. Upgrade.

When buying a radio from someone on ebay, I do what you probably did and what everyone else should do and that is, check out the sellers history before you bid. I also check to see if they have more than 2 concurrent auctions running. If they have no feedback and only one item, I usually not deal with them till someone else has tried or he adds more stuff to let me know he is serious about selling and not out to make a quick hundred or more. Also do some e-mail transactions and get an address from the individual that has the item when you win the bidding on. Get as much info on the item as you can. Save your messages. E-Mail msg's are admissable in a court of law as proof. If you are really skeptical, Save the webpage to your harddrive and any pictures.

Hope this helps all.

hey lloyd the toid

being a member of the "master race"
as you claim why cant you master
a 5 wpm test?.. dum ass huh?
why dont you ask your god who
you claim is only going to let
white folks in the pearly gates
and everybody elses going to burn
is there really one god for each color?
lloyd i know of a few jews, blacks
and just plain old white folks
that have pass more then 5 wpm
(whats wrong with this picture)
its funny to read your posts
into the groups . i always wonder
how someone could be that dum
and still have a pluse ?
you are alive "R I G H T ?"
"'''' tiny tinna this" ha
maybe you sould sell all them junky
SWR radios you own? and get you
a transmitter so you can be ready
when you do pass.............
N O T !!!!
HAHAHHAHA EHHEHEHEH
IM SURE AS THE SUN SHINES
ON MY WHITE ASS YOULL NEVER
PASS THAT HAHAHHAHAHEHEHHE
HOOHOHOOHH

o and by the way you , kevin , steve
vic, harvey and all the 3950 fags
that talk their master race BS "and you sitting at home listening and
jacking off
cause thats all you can do"
can KISS MY 100% WHITE ASS

have a gay day

What's the difference between women at ages of 8, 18 , 28, 38 and 48???
The answer is :
08 - You take her to bed and tell her a story
18 - You tell her a story and take her to bed
28 - You don't need to tell her any story and take her to bed
38 - She tells you a story and takes you to bed
48 - You tell her a story to avoid going to bed

I notice you carefully edited out the part, immediately after the
snippet in your sound clip, wherein W1WCR (the Net Control Station)
and another Net participant stated that they did not like the
language used by AA8DP or want it on the Liberty Net, language which
I agree was ungentlemanly and undesirable. (I can provide an
unedited recording of this, if desired.)

There's a contrast worth noting here: I've never heard those who
associate with the jammers similarly chastise W9ART or K5BLB for
their threats of violence or jamming tapes. (To be fair, I did
once hear K1GKM tell David Castle, WA9KJI, that his behavior was
wrong.)

However, there was nothing at all illegal in AA8DP's transmission,
nor was it jamming.

Those who cause malicious interference are the rulebreakers.

Honor bright,

Kevin, WB4AIO.

Lloyd:
What has killed Ebay is the resellers. Instead of the auction being used as a giant white elephant table, large numbers of people try to make a living buying anything and selling all for a couple of bucks more (not that this doesn't happen a swap meets). I have seen the same item show up four times, each time at a higher reserve. Buying an item to keep (from the original owner) is becoming rare. I have recently gotten a few very good buys on computer items but always for an item that the average reseller wouldn't recognize. Notice how everything is mint or barely used? The resellers are all reading the same Ebay how-to books.

BTW: There is an MS8 speaker at $41 with two days to go. I would almost bet that this will go for more than the new price ($49).
Don't ask me why.

When is this CRAP going to stop??? The new test requirements are
not welfare, you still have to study to pass the tests. Remember
welfare is a hand out. For Amateur Radio license to be a hand out it
would mean no testing at all and no charge for the license.

The Code War is over so stop fighting it! If you think the FCC is
going to rase the code speeds up again forget it, it's not going to
happen. The return of the 13 and 20wpm requirement has a snowball's
chance in Hell of coming back.

Go ahead and join now, if your were licensed ANYTIME
during 1975 or earlier, you meet the requirement.
You don't have to wait until actual aniversary date of
your first license. If you were first licensed in
the latter half of 1975 and too late be included in
the 1976 callbook, it's helpful to submit a copy of
your 1975 issue license if you can produce a copy of
it.

You better re-read the message! Extra Class was said by Mr Cold
Shower!! Anything else Mr. Im better because I am Dennis B.
Walton-Tech+? You are supporting the Arguement that other coded hams
are denying.

I am a no-code technician not by choice. It may have taken me a while
to go for my code due to owning my own business, but at least I am
still going to do my upgrade. So keep your browser open and check QRZ
from time to time. Until then I work my ass off trying to improve my
life instead of furthering my hobby and when I got the time from work,
I'll do my code.

I certainly hope all you cw die-hard wowsers don't use anything above 6M, Surely to use vhf and above it should be a license requirement to demonstrate a working knowledge of satellite earth stations? How many dedicated cw users would no longer be able to use 2M if they had to know how to calculate kelprin elements, dopler effect or write satellite tracking software? Actually a working knowledge of satellite equipment should be mandatory for any ham license, and for that matter, why not introduce a practical test - could you or any of you cw buddies design and build a transceiver for the 47Ghz band? I dont think you would
have any more idea than the average CB'er - NONE. There is more to ham radio than cw.

> Did anyone else hear this? Has anyone heard any mention of it?
>
> Bob

Yea... those frequencies have been used for clandestine operation for years---the method is called 'piggybacking' (works especially good on the FM broadcast band for bugging operations with a bug on a broadcast channel and a monitor receiver nearby). I monitored 10 and 15 MHz channels overseas and heard plenty... Strange, dead serious, short one-liner transmissions right at the beginning of the WWV silent period (most likely made from an aircraft), another broadcast... "M60 calling M16" obviously stateside bootleggers, plenty transmissions and nutty antics in Spanish from Latin America, and I'll never forget that one guy who whistled that ever popular Lambada song of the late 80's---obviously, that guy was a Brazilian.

Actually, activity on the HF bands in South American is sheer bedlam. I have heard bootleg telephone companies running patch traffic on the 75 meter amateur band. Amateurs, or anyone who can get hold of communications equipment (usually amateur gear) routinely operate in commercial, military and government allocations---and not always maliciously! There really is no effective rule of law on the airwaves down there.

Even more interesting are the coded broadcasts that piggyback with international shortwave broadcasters; folks stateside can't hear those. I'll leave that discussion for another day but I will say one BBC channel is routinely used by one obnoxious country (and it's not the US)! I wouldn't have said anything but it always interfered with my enjoyment of BBC program material on that channel.

No, those tranmissions on the WWV channels are nothing new but they seemingly have been ignored.

>that is going to happen.

When the FCC gave tests in the 60's,the question pool was supposed to
be a secret. Then, I believe it was Amco or something like that, had
people taking the exams just to get the question pool. After a while,
they had the entire question pool without going to the FCC.
I think a better approach would be to make the question pool so large
that it could not be memorized easily,
Just my opinion
Henry, K7WAR

Which "fellows?" I've never said either of those things. What I'm
saying is that most buyers still prefer the paper book over the CD, and
price is only a secondary factor. How you get from that to "hams are
cheap" mystifies me.

Well, I agree, 5WPM isn't a real test. You can basically just memorize
the characters and do a 'mental lookup' and pass the 5WPM.

But that's not the point. The point is CW should go, period. It's
outlived
it's prime. If you like it, use it, but don't force it on everybody.
ESPECIALLY
not as a fake qualifier of technical superiority for the 'so called
Extra' class.

Rick, they are just unhappy that the federal subsidy program for
Morse code has been decreased. They might now have to get off
their lazy butts and expend some energy promoting their favorite
mode.

I was going to order three CDs the other day. When I realized it came
to three digits, I backed out. (And I got a new ARRL Handbook for a
Christmas present.)

Riddle me this, Jon. I can get two copies of "The ARRL Antenna
Compendium", Volume 6 *WITH TWO CDs* for $40. Why is "The ARRL
Antenna Book" single CD priced at $40?

I don't remember pride being a Part 97 requirement. Anyone whose
self-esteem depends on an arbitrary governmental license should
see a psychologist. The value of a ham license is simply the
privileges granted.

> Why is "The ARRL Antenna Book" single CD priced at $40?

Because it's worth it.

Perusing my latest copy of QEX last evening, I saw a CD advertised at $1,299 and a number of antenna books in the $80-120 range. The ARRL prices are absolute bargains against what is available from the "commercial" press houses. I think we ought to look at raising our prices!

As a ham for over 30 years I am personally glad to see the code requirements reduced but I think the technical part of the exam should be harder. After all ham radio has led a lot of us to technical careers and not cw professionals. Those that want to get on the air and ragchew at 20+ wpm can do just that. Those of us interested in the more technical aspect of the hobby should not be held back because of the code requirement. We need to do all we can to get more and younger folks interested in the hobby or it's going to die on the vine. The internet is hurting us everyday, why should a youngster put up a antenna, buy a rig, and fight QRN, QRM just to talk to his/her buddy in Japan when he can purchase a cheap computer and do the same thing - static free. We don't require new internet users to start off with a 300 baud modem and have to earn their right to go to a 56K modem. Then we should't expect them to start off at 5 wpm and work up to 20 wpm just for more privileges.

Just my 2 cents worth

I don't know, Cecil, I am proud of some of my accomplishments in ham radio, and the value to me is in what those priveleges have allowed me to do. I am even proud of passing the tests, but that is not at the top of my list of lifetime accomplishements. :-)

Getting back to what Mr Fiebig wrote, I think that today's testing is less of a handout for full amateur priveleges than was the test I took to get same back in '63. I bet lots of people today would love to take a test they could pass after studying 16 pages of study-guide material. That is what it took to pass the General in 63, and for that I got all amateur priveleges at the legal power limit.

Get real Jon how many times has the excuse been used on the newsgroup to explain why the entry level license classes will not join the league is they will not pay the $35.00 fee to become a member of the ARRL. now your saying that even if you reduce the price of the CD to a price that is lower than a book most won't even buy it then. Sure sounds like you saying that most Amateurs won't buy either no matter how cheap you make them.

At 5wpm what difference does it make? Unless of course you are
actually doing it to LEARN the Morse Code. In that case, I hope they
use the Farnsworth method.

Chuck,

Well put however I know of many people that started in ham radio and
made a living as a professional CW operator. Example: Merchant
Marine, Military, CIA, etc.

And to respond to why a young person would want to go to the trouble of
hanging a ant, fighting noise just to talk around the world. CHALLANGE.

IMO, the ARRL would sell twice as many Antenna Book CDs and make a
larger profit from them if the price were $29.95 instead of $39.95.
I would never miss $39.95 but it is just not worth that much to me
(and I would really like to have one). It's got to be worth even
less to those hams who would miss the $39.95.

I would rather go hungry than pay $10 for a high-class hamburger.

Not to me, Hans, and I really would like to have one. There's
a threshold involved. I'm not unique in that I already have
two ARRL Antenna Books. The incremental information is just
not worth $40 to me.

If you aren't involved why defend them ? The joke is a cliche and while
it might elicit a brief chuckle, does not belong here. It only serves to

point the level to which hams have sunk, male and female.

Your claim that most hams aren't perverts is true. But there are a far greater proportion of freaks in ham radio (and on the internet) than in life in general. It attracts friendless escapists who are looking for a fresh start.

Witness a senior citizen aged ham I know of who instructed CW classes at ARRL HQ, a convicted child molester, who was arrested yet again a few years ago.

I NEVER, in my LIFE, had the displeasure of having conducted discourse with someone like this.. I was disgusted after the fact when I thought back and realized that he was quite prone to latching on to the younger ham class students.

Fortunately for the hobby, he gave his radios away, presumably in embarrassment for having been outed.

So you tell me why the jackasses obsessed with

1. lowering the code speed
2. getting more "yound blood" and "fresh faces"

are the same cases who started the discussion of reproductive functions in a thread about ARRL E-L-E-C-T-I-O-N-S

Actually the move to 14.275 is not the reason this forum is better.
The move is just a part of the overall solution. You see we, the
Goodfellows, have decided to end this idiotic bickering. And the move
is to break off the combatants.

As to why this forum is better. I, for one, have disengaged from the
war. Both on this forum and on the air. I hope my example has led
others to do the same. Credit is also due to Bob Youngblood, George
Ashley, Marti Chittum, Oris Grim, Jimmy Obrien and even Doc. Thanks to
all of you. No one can expect a "easy" disengagement. There will be
occassional "skirmishes". These to shall pass.

Gee little Porta Johnny waa waa Thought I was kill filed dickweed.
Maybe you should name yourself. Any person who slanders fellow club
members ina public forum needs to be on a list like this. This is a
truth that I read from your posting, I wrote to several of your club
members that I personally know to advise them that you basically are a
lower form of plant life. I provided copies of your post to them as
proof

Therefore, I did read the truth (as you wrote it) I did write the
truth (unless you lied about the whole thing) I did think that the
truth should be spread amoungst that you insulted and I am telling the
truth now. I did all those truths and would do it again, because I
know it pisses you off.

Maybe you wanna send popgun shooter 1 at me again. Yes Johnny rides
the cotton pony, we all know you have a dejanews address and post
messages back and forth to yourself. Best you stay near that big bad
radio station you set up. Never will know when Ares will need you to
rescue someone caught in the ice flows of the Niagara.

Tata prattle brained fool. Go back to teaching your pet poodle morse
code. I'm sure it would be a better operator than the likes of you

Don't forget to killfile me again

It was only 10 pages in the 1957 ARRL License Manual and probably less
than that in 1952 when I passed Conditional and acquired *all* amateur
operating privileges. There were no solid-state device questions at all
on my 1952 exam. :-)

Well, I was talking about accomplishments within Amateur Radio, and it kind of hard to disassociate those from my license. I didn't think anyone wanted to hear the horror stories of how I keep my old beaters on the road well past their expected dates of demise. (No one except Carl; the lobster bet does require that the loser drives, so I am going to pick him up in my Jeep. Seeing his fearful expression and white knuckles will be worth the whole trip!)

In my case, it is not possible to disassociate my professional accomplishements from my license, either. :-)

Are you telling me that ham radio has been dumbed down since 1957? And to think, the newcomer today gets to look at the few hundred pages in Now You're Talking study guide and be thankful he didn't have to study those 10 pages to pass today's dumbed down exam.

Well, actually, it is: Can someone recognize the individual letters - yes or
no?

I agree that for "Conversational 'CW'," the 13 wpm test is THE test (and 20wpm
tested proficiency only).

2868. N0VFP's New Years Hate Message

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-21 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <86ag08$6hv$1@nntp8.atl.mindspring.net>
Source record: 120926

On either Dec.31 or Jan.1, N0VFP posted an extremely racist NEW MILLENNIUM message that infuriated Eric Cooper, me, Dan Jeswald, Roger Wiseman, Tim Volz and others. I've searched the archives and cannot locate it and it's not on old messages on my USENET board screen. I have a neighbor who is going for his doctorate in political science with the emphasis on Internet hate and that posting would be appreciated by him. Would someone please copy and paste it if found.
Thanks a lot.
Doc,AF2Y. P..S. I no longer know what it's like to be knocked offline or not to be able to connect the first time. As I said, each ISP has advantages and disadvantages and monopolies should be relegated to board games. Also I have not been active on ham radio and the Internet because of a very busy sked. The Internet has greatly increased my value as a diagnostician and treatment planner and the $ is unbelievable. When I get the chance I shall return to illuminate this board as well as the ham bands; in the meantime have as much fun as possible but it will be tougher without me.

Not a chance. If codehaters can't understand why they
should learn it from all that has gone before here on RRAP,
attempting to "promote" it to them would be an enormous
exercise in futility, to say nothing of overfilled with
rancor.
Oh BTW....Why haven't we heard from you, the character who
wants everyone with a ham license to be an engineer, on the
memorize-the-question-and-its-answer writtens? You ARE all
smoke and BS, aren't you?

Well, that's three potential buyers who've backed out
because of price. Wonder how many more will sign on?

I do not think that all of those who will pass a 5 wpm test and get on HF are necessarily "code haters," Dick. And I am certain that not all of them have been following the thousands of threads and tens of thousands of posts on RRAP. For some, the ONLY practical exposure they will get to the potential worth and fun of manual OOK CW is going to be from old time CW ops like you and me. For you to have determined, without even having met these people, that you would be overfilled with rancor to even try indicates to me that your goal is not to promote Morse code use at all.

I hope that some of these newcomers come to understand that there are people willing to offer encouragement in whatever they decide they want to do with ham radio if they come on board. If that includes Morse code, I will certainly do my best to help; if that includes some other mode, I will do my best to help with that, too, maybe at the price of a few minutes of explaining why I like OOK CW, but without any prejudgement about them if all they do with that explanation is nod their heads politely and thank me for helping them decide what antenna is best.

Michael Bruss wrote:

> When 5 wpm code tests are given, is the code usually in Farnsworth or
> regular?

Hi, Mike,

The code tests are almost always sent Farnsworth. ARRL tapes contain 18 wpm characters spaced at 5 wpm. This offers two advantages; it gives a bit more time between characters and it helps you train for higher speed CW by getting you used to fast dots and dashes early in the process. This latter point can be a disadvantage for some who may have trouble aurally distinguishing dots and dashes at 18 wpm.

To digress a bit, and add a bit of my input to any who are having trouble with the dits and dahs, I will say that for some people (me, for instance) the difference between a dit and a dah seems to be almost natural; I never had any trouble. Some I have talked to who have been having a lot of trouble with the code turned out to be having trouble hearing the difference a B (dad-di-di-di) would be sent and they would hear beep-beep-beep-beep. For those, a non-Farnsworth code test may help. The easiest approach is to first spend time listening to the code until you can always decode the dits and dahs that are sent, without necessarily recognizing what letter it is. One way to do this is with a computer program, work on A/N K/R combinations until you can always recognize the sound. Then, jump immediately to the Q/F Y/L combinations, to do the same with longer letters. Not only will you have learned a few of the "tough" letters, but you will now have a good skill at dit/dah decoding and can now move on to memorizing the character sets.

One last point; I talked to Bart Jahnke, the ARRL VEC Manager. He told me that the League can supply 5 wpm non-Farnsworth tapes to ARRL VE teams, but that those who need them as a reasonable accomodation would have to make arrangements in advance with the VE team. It may be easier to work on dit/dah decoding a bit, but if it looks like that option is the only way to reasonably pass the test, contact the ARRL VEC.

In any event, if I digressed too much, please forgive me. And good luck on the tests.

I wish they had to. For sure they'd have to learn
SOMETHING, unlike todays question pools.

> That is what it took to pass the General in 63, and for that I got all
> amateur priveleges at the legal power limit.

And as you tested, FCC was preparing to recant on those
"full priveleges", obviously realizing what a mistake that
ruling had been.
Now today's new and improved FCC just trash-canned all the
progress that has been gained over the past 32 years, all
the bitching aside. We advance even further to the rear, to
where any CB/FBer who wants to memorize enough code to copy
dots and dashes, and do the necessary study of
question/answer pairing can quickly and easily, without
learning, grab everything ham radio has to offer. It has all
been made essentially worthless. Next stop, useless.

And then? Some slow, inexorable and continuous, but
definite conversion of amateur spectrum to commercial use.
Just as the frog in warm water sits placidly, fat dumb and
comfortable, while the temperature is slowly turned up.

Just wait-- the justification WILL be there, and it will be
valid.
There's already plenty on the books, and you ain't seen
nothin' yet.

And I'd LOVE to be wrong. But history DOES repeat itself
and the past 35 years history will be repeated in spades,
this time. We're talking the full HF ham radio spectrum now,
not just one sliver high therein. And, there won't be a damn
thing anyone can do about it. In 5 to 10 years, maybe much
less, the HF bands will sound every bit as bad as 27 MC does
now, and the FCC will just as studiously ignore it all,
whatever is left, - If there IS an FCC left. Riley is ONE.
Even with his hi-tech junk he won't make a dent in it.

It is clear that NO ONE at FCC has been paying attention,
at all. So now ham radio will pay the price.

And with the proliferation of CD copiers, it would seem
that some- maybe many- hams would 'share' a copy, since the
price seems inflated anyway. I can't see that as a good for
anyone.

There's a pretty good spread between $0.00 and $40. I believe there are some far more realistic figures to be had in there somewhere. What is never known is the "politics" behind it all. As you mentioned, maximizing profit is the intended goal. Maybe the party doing the pricing sees some personal advantage to be gained by "maximixing" the profit involved in his decision, since if successful he gains points with the boss. Without knowing nor caring who is involved, it just seems wrong that ARRL CD literature, even in a niche market, can't be more in tune with the rest of the world.

The best way to build any market is through satisfied customers. I don't even know anyone who has bought any of the ARRL CD's. If I did, and had an opportunity to look them over, I might well decide I had to have them, too. As it is, it's only an seemingly overpriced catalog item to me. With virtually every ham using computers, and virturly every computer including a CD drive, I would think they'd be popular if priced attractively. Obviously they are not. And it isn't because we can't afford it, either. The priority just doesn't justify the price, whatever the cost structure.

I was seriously thinking about the QST Cd's, even at that price, until I learned that they aren't fully searchable since they're scanned as full pages instead of text. That dropped their value to me. I understand the index only is searchable.

Are you really offering that hams would share a copy of a $40 CD, but would not share a $30 CD?

I do agree, such "sharing" is not good for anyone; a good example is found in the Antenna Optimizer program. When someone cracked the cripple code in the demo version and started downloading copies everywhere, the vendor simply folded shop and we will all never see the next version.

This is not the kind of sharing that my parents taught me when I was young.

Unforutunately, the amount of staff time it would have taken to have OCR'ed *and* cleaned up the text from the old QSTs would have simply not been doable. In a full-text QST, the market would also expect all the linkages to be working, including the page jumps for 'continued' articles, or references to other articles, etc. At that point, the cost would probably be so high that no one would buy them.

If you just want a searchable index, a free one is available at:

http://www.arrl.org/members-only/qqnsearch.html

The next generation of that search capability will have keywords added (done by Al Alvareztorres, AA1DO, the TIS Coordinator) so that the "Mid Michigan Skyhook" will appear if one types in "Tower" in the title search. This is one of the things we do with some of the revenues generated by the sale of the for-sale books.

> smoke and BS, aren't you?

You *have* heard from me, Dick, over and over, and from Bill
and Ed, too. The ham exams in 50s and 60s were no more difficult
than they are today. In a lot of ways, they were less difficult
than the exams are today. The ARS had already been dumbed down
when you took your first ham exam.

There are more sentences in the correct answers to today's questions in the pools than there were in the 16 pages I studied in 1963. Why would you think that you and I learned by reading those pages in 1963, but that most newcomers today won't learn by reading the pools?

I have taught at local classes and although I saw a few students who just wanted to memorize the answers, most of the students appeared to me to want to learn about the subject I was teaching. I presume that the same passion for knowledge that drives you and me will exist in the same percentage of them as it did in my generation. In 1963, some hams learned and some memorized, just as today.

Dick, if you have an ARRL FCC Rule Book, find the sidebar that explains the major changes that have taken place in Amateur Radio over the years. This restructuring is but one of many, and in each case, Amateur Radio continued to be pretty much what it always was. From what I am hearing, VE sessions that used to be dead are springing to life; can that really be bad? What was disinterest is now interest. Can that really be bad? IMHO, the restructuring that just happened is a good thing, will breathe new life into ham radio, which will be no better or worse than what we all make it. In my opinion, the time to discuss this in detail was during the rulemaking process; we all did, including ARRL, and out of that, the FCC reached a decision. I, for one, intend to support that decision because that is the one that was reached under our legal process. And that decision does NOT define what Amateur Radio *is*; that is still up to you and me and all those who become licensed under the provisions of Part 97.

Dick, if I thought for a minute that the problems facing Amateur Radio today could be solved by testing, I would support it. If I thought that making people work harder before becoming hams would solve those problems, I would support making them work harder. Heck, Dick, it is harder to become an Extra than it is to become licensed to drive a car,

and 50,000 lives a year hang on the wrong side of the balance on the outcome of the latter. When I teach radio classes, I don't see troublemakers and rabble rousers; I see serious, respectful students eager to enter ham radio. THESE are the people who will be our future. When I see the bad guys in ham radio, I don't see lazy whiners, I see disturbed people who were willing to work hard enough to get a test under today's rules. Most VHF-only hams are not breaking the rules on VHF; they will not break the rules on HF. Most of those who are breaking the rules have passed a code test. There is simply no correlation that I see; how can we decry that the change in code test speed will create one?

I intend to move on, and in spite of the protestations of my friend Len that such is "recanting," I will say clearly that we all had our say, ham radio is what it is, and we should all work to help it grow and be strong. All those who will be issued licenses under Part 97 will be hams, they can take no tests other than the ones that will be made available to them, so after they have done so, I will do what I can to be helpful and encouraging, both personally, and on behalf of ARRL. I sure hope that you can find it in your heart to do the same. IMHO, that is the course that is best for ham radio.

As far as:
> Sure. Do you use anything below 6m?
Nope. Never. Too busy and too happy where I am. LOTS of very cool
technology above 50MHz. Fits right in w/ me.

> How many of those do we have on 2m?
Very many. Ever tried to QSO via satellite? VERY busy. I digitally
QSO'ed w/ Sergei who was aboard Mir at the time. Very cool. Also, very
challenging to beat others to the chance. Satellite earth stations on
2m? A bunch. So much that this technology should be as much a part of
passing a test as CW should be.

> > how to calculate kelprin elements, dopler effect or write
Actually, that's 'doppler', named after Christian Andreas Doppler, and
'Keplerian', named after Johannes Kepler. Here are some decent URLs:
http://www-groups.dcs.st-and.ac.uk/~history/Mathematicians/Doppler.html
http://www-groups.dcs.st-and.ac.uk/~history/Mathematicians/Kepler.html

If I need to know about Samuel Morse and The Code(TM) to send digital
data bouncing off of satellites, then folks who want to send CW should
know all about Doppler and Kepler, et al; data communications, etc.
Both would make great test questions, n'est ce pas?

Unless we want to be an organization of hotheaded ignoramuses....

Just my .02,
73

I like my books on paper. I find it difficult, at best, to
bring my laptop with me into the bathroom for a good read.
And best of all, if what you are reading is by someone who
obviously has no clue whatsoever, you can save on toilet
paper, albeit a bit 'rough'...

I have found it sounds much more polite when someone tosses in their
callsign to the conversation. "BRRRRRREEEEEAAAAAAK" for jumping in
to a conversation is the sort of thing someone might say who wasn't
raised indoors.

Get ready sport's fans!

Tonight marks the return of the greatest Amateur
Operator to ever key a microphone!

Be there for the ham radio event of the Millenium
as K4OKA returns to 75 Meters tonight!

Representatives from other 75M frequencies may bow down
in the general direction of Hickory NC and bring a tribute
fitting of 3894.9

Assorted Toilet ticks and "Captain Fruit" can go pound sand
into a Ralleigh-Durham hooker's b--ck rear-end. Ho Ho!

Yes sir, "So You Want To be a Millionaire" will drop several
ratings points this evening, as the World tunes into 3894.5 for the
triumphant return of the greatest ham that ever lived - Big Al - K4OKA.

AND PORKBUTT---> YOUCAN KISS MY BIG FAT ASS, BOY!!

Hoo Hoo Hoo Hoo Hooo!!!!!!!!!!!!!!!!!

If I may join in on this discussion. When computers got a foot hold 30 years ago we were told we would never need printed matter anymore, that's proved to be another load of BS. We are churning out more paper now than ever before, the same goes for CD's there is no way they will ever replace printed material let alone a book. They are very user unfriendly, and even if they where given out free most people would never use them the reason doing a manual search through book is a dam sight quicker.

regards

Well, as much as I hate to say it, I found a 1987 callbook on E-Bay. You
might check around the for sale groups and online auctions for a used one.
I'm not aware of any source to purchase old callbooks other than used, and
the cd callbook guys do not go back far enough...

I don't like that approach. If one, or both, supplies receive a
voltage from the other, and it is not blocked by a "LARGE" diode, you
may have a problem.

Have you considered a standard auto battery? Put it across your Power
Supply. Use it to charge the battery and draw the current through it?
Works fine. Just be careful and vent it properly, or get a sealed
battery.

New Quick & Safe Way To Change H.T. Antennas

Prevent damage to your radio's SMA antenna connection due to having to change antennas for base,mobile,or to a different style than stock antenna use. Adapter will take all the wear and tear,instead of the chassis connector being subjected to wear or from coming loose. You can now quickly and safely change the more popular and wider selection available of BNC antennas,and help to protect your radio from damage,all at a low cost.

Adapter has gold contacts with a neoprene rubber covering. A low profile design adds only 1/2"-to-5/8" depending on radio model to the overall antenna length. The rubber base seals to the top of the radio with no spacers needed to prevent moisture and dirt from entering. The base also provides a positive support for all antenna applications and a better overall appearance than other available adapters. There's no need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R
Icom: IC-R2, IC-T8A, IC-Q7A
Kenwood: TH-G71, TH-D7
Alinco: DJ-V5
Standard: C508A
Aor: AR-16

To view a photo of the adapter go to:
(WWW.QRZ.COM)(Swap)(Enter keyword SMA to search classifieds)

$11.95 + $1.50 S+H (Check or money order)

Boy OH Boy does your Government love people like you, when it comes and bites you in the ASS and it will it will be too late to say we where right all the time. Make NO mistake these evil SOB's are running a police state you DO NOT live in a free country. Your Government is just another brand of Communism. I find it difficult to accept how the American people have stood back and be well and truly STUFFED you spent years and lost lives fighting Communism all over the World only to have it happen in your own back yard. Mr Clinton the antichrist is in bed with the Chinese only because he is a Democrat which is another word for communist. Wake up America before it's too late, personally I think you have already kissed your ASS goodbye. If you think the FEDS are going to stop at the small guy running an electronics shop then you are living in the dream world they want you to, next it's going to be Deja.com and the Internet. The last thing they want is forums like this spreading the Gospel and sharing information, I give it 12 months at the most and all of us could be charged with an offence for just reading this stuff let alone contributing to it.

I am looking for the simple little earphones that plug into one ear.
The ones at Radio Shack really suck and cost too much. I saw a shit
load of them one time at the Dayton Ham Fest for 50 cents each and wish
I would have bought more. My damn cat ate my last one. Does any one
know where I can find these? I am willing to buy in bulk.

Thanks, Steve

Since the Japanese have been cited by NCI as being a model for no code HF, here's a little tidbit that the Japanese amateurs have to abide by as well. I am sure in keeping with their new and highly funny bylaws, the BoD of NCI should file comments with the FCC along the following lines

The Japanese Road Traffic Act of 1999

Please Concentrate On Driving!!

An amendment to the Road Traffic Act has taken effect on November 1, 1999 banning the use of hand held communication equipment (including amateur radio hand held transceivers) while driving. Also the Act says "should not look at car navigation systems (including "display" of amateur radio equipment) for a long period of time."

(1) Prohibition of the use of the portable telephone while driving

One of the new rules the driver must observe is that "he/she must not use the radio communication equipment e.g. portable telephone while driving. This "radio communication equipment" means the equipment which cannot transmit or receive a message without holding a part or a whole of the equipment in hand. This includes handy type transceiver which is held in hand when transmitting or receiving a message. On the other hand, this rule is not applied to the use of the hands free equipment for the amateur radio operation and the so-called mounted type transceiver for the mobile vehicle which is fixed to the car.

(2) Prohibition of observation of the picture display equipment

The next rule the driver must keep is that "he/she must not watch the picture on the picture display equipment e.g. car navigation system." This rule prohibits continued observation of pictures of the picture display equipment such as car navigation system and car television. It is permissible to use the car navigation system in the usual way, but it is prohibited to see the picture display equipment continuously while the car is running in order to operate the equipment for detection of a restaurant or a gas station or to input information for route leading to the destination. "The picture display equipment" in the above paragraph includes not only the car navigation system or the color television, but the liquid crystal display equipment frequently used for recent radio equipment which provide information such as radio frequency, SWR, ALT and RS. Therefore, while the car is running, it is against the rule to see the picture of the display equipment continuously to change frequency or to tune the antenna, or to see the picture of the display equipment continuously to send or receive data by packet communication or to read

information in letters of the portable telephone. For the person who violated the above rule and as a result incurred the traffic risk on the road, the penal regulation (penal servitude of 3 months or less, or a fine of 50,000 yen or less) will be applied.

(3) For safe driving

Even before enforcement of the above regulations, the Road Traffic Law, Article 70 "Obligation for Safe Driving" has been applied as a penal rule to the driver who incurred the traffic accident due to forward inattention while the car is running operating the portable telephone or the radio equipment, or being engrossed in watching television. The purpose of the revision of the rules of this time is to clarify by law the responsibility of the driver to cope with the rapid increase of traffic accidents due to the remarkable popularization of the car navigation system.

It is our earnest request that every radio amateur will enjoy mobile ham in consideration of safe driving by using hands free equipment or a mounted type transceiver for the mobile vehicle while driving.

I am an active VE. Under the current requirements, to prove a pre-1987 Technician Class
amateur radio license you need one of the two following:

1. a copy of your Technicial Class license issued before the 1987 date
2. a letter from the FCC stating you held a Technician class license before the 1987 date

From: gundoc <gundoc@iglou.com>
Message-ID: <388a6072@news.iglou.com>
Source record: 120759

I am Going to try to cut down on the amount of radios that I have because
1. I can only use one at a time.
2. I have too Many.

GE MP-D VHF 136-154 MHZ. This Radio is Programmed into the 2 meter ham band and is a great Radio. New large capacity Battery, Charger and has been converted to a BNC antenna connector. I have had a keypad face installed on this
radio but needs a new interface board to make it work. Radio works as a standard non scan MP-D. This radio puts out a little better than 7 watts and I can get into almost all of the repeaters in my area. Oh yes the Radio is intrinsically safe
as well as the new intrinsically safe battery (over $175.00) from GE.
$300.00

GE MP-D UHF This Radio is programmed into the UHF ham bands and is as great a radio as the VHF radio above. This radio has the standard antenna, a new intrinsically safe battery, Belt clip, and a charger. Standard non scan radio. Just to explain a little about MP-D's for the people that do not know they are 48 channel Alpha numeric radio's . This radio is very wide banded as I have ham and GMRS repeaters programmed into it and it is just as good at both ends of its split.
$225.00

GE MT-L UHF This radio is also programmed into the UHF ham band as well as a GMRS repeater. Radio is a 16 channel scan version that has slight wear on edges. comes with charger and new Intrinsically safe Battery and yes the factory antenna. I like this radio it is a poor mans MP-A and works just like an MP-A select. With the new
battery $250.00

Kenwood TK330 UHF. This Radio is in the 450 - 470 split and is not programmed
by me into anything. I can hear my local police on it so I know it works. Radio is a 10 channel with scan and is programmable. I do not have a charger for this radio I have been charging it on a universal charger just to listen to the Local police.
This radio looks great and still has the speaker mic cover over the connection.
1600 Mah battery and antenna.
$150.00

Icom U18 UHF . This is also a 450 - 470 split radio and I have not tried to get it programmed onto any frequency yet. I have been listening to local businesses on it and finally figured out I was listening to a garbage collection company. Anyway this is a 16 channel scan radio with a radio

shack battery that can be charged with a wall wart charger. Radio is in great shape and will take a large assortment of batteries from commercial and Ham Radio's. And it uses a standard 2 prong
Speaker mic.
$125.00

Maxon 2850 UHF This is another radio in the 450 - 470 split that I have and have not used for anything. Radio is working but not programmed to anything I can pick up. But I can talk to it and hear it with My FT50. Radio is 10 channel with standard Battery and Maxon charger.
$125.00

Mobiles

GE MVS UHF radio This one is in my van right now and is my UHF ham radio. This is a 25 watt UHF wide band radio that will do ham band and GMRS and the best part is it is 128 channels and I have all but 14 programmed into it. Radio will scan 16 frequencies at a time and is another great GE product. The only reason I am selling this radio is I am trying to cut down on the radios in my van. It looks like mission control with all the single radio's. I need to get a dual band radio to take it's place.
$250.00

Motorola Mitrek UHF Radio's I have two Complete 50 watt radio's that would make great link radio's as they are 410 - 430 split. I bought these with this in mind. They come complete with cable, single channel control heads, Mic, and speaker.
$40.00 ea.

Well that is it for now I may have a few more radio's out in the garage if so I will post another ad. As usual I will consider offers and trades for other radio equipment
Dean

Now Now John, It's not 250 miles, more around,
110 to 145, depending on local in your neighborhood.
You should know me better by now, driving for me is
a pleasure, not a task for most people.
Porky Huh, sounds like a great reason to go up
there and try my new recipe for pork rinds.

As far as the set up, I said before, more powerful
than when you left town.

Channel 1, I WON, No ifs, ands, or BUTTS about it.
I'm working on 17 now, but the good things about
that channel, there's always some trucker coming
through town to pick on.

Ok, Jon, but the paper copy is $30. I'm sorry, but 70,000 pages of filler
(propagation tables) isn't worth the extra $10.

: -Date: Sat, 15 Jan 2000 04:15:25 +1900
: -Subject: Complaint about ONDCP alleged payola to US TV Broadcast
Networks...
:
:
: Dear sirs,
:
: My name is Michael Hess, I am a citizen of the United States and a
: consumer of televised broadcast media.
:
: I would like to formally request that an immediate investigation be
: launched into allegations stemming from a January 14th, 2000 Salon.com
: article where, Barry McCaffrey and the Office of National Drug Policy
: (ONDCP) have been accused of paying off US television networks,
: including "ABC, CBS, NBC, the WB, Fox, and, this TV season, UPN" in
: return for US government sponsored anti-some drug propaganda.
:
: An excerpt from the article makes clear the need for an official
: investigation:
:
: "As disclosed Thursday, the scheme began in fiscal year 1998, when
: Congress appropriated nearly $200 million a year over five years for

: paid anti-drug advertising. But there was a catch: Congress said the
: networks had to give the government a two-for-one deal on the ads.
:
: Instead, the networks and government officials decided that anti-drug
: themes and stories in prime-time TV shows could take the place of the
: free ads. Ultimately, promulgating government-approved propaganda
: afforded the networks the opportunity to earn buckets of extra cash.
:
: The arrangement raises legal questions. Some observers think the
: government may have run afoul of the nation's anti-payola regulations.
: Payola entered public consciousness during the 1950s, when rock 'n' roll
: impresarios were convicted of bribery for paying DJs and radio stations
: to play specific records."
:
:
: In the same article it says the FCC was contacted for comment:
:
: An FCC enforcement bureau official says, "I was not aware [of the ONDCP
: financial incentives]." He adds, "We haven't received any complaints
: yet. If we do receive a complaint, we'll proceed from there."
:
:
: Please accept this as a complaint. I searched your web site for a
: complaint form or an address and got bounced from several of the pages
: there, the email address above is the closest one that I could find for
: the purpose of this complaint.
:
: If this complaint has reached the wrong office please forward it to the
: FCC Enforcement Bureau for immediate consideration.
:
: Thank you.
:
: Sincerely,

I'm definitely not in favor of piracy, but there have been some pricing
models done which show that piracy is more rampant for products
which are perceived to be overpriced. In other words, if people feel
they're being ripped off, they're more likely to rip back. That's human
nature. (It is also human nature that some people hate copy protection,
and will break it just to show that they can. We see a version of this
in ham radio where people will "mod" their radios, not because they
intend to use them illegally, but just to show that they could.)

Borland became a successful software publisher by recognizing
those facts. By keeping their pricing low, they managed to avoid to
a large extent the piracy that plagued other software publishers.
They marketed their products the way popular paperback books
are marketed. Few people copy paperbacks.

Worth 25% more than the paper version? I don't think so,
and apparently neither do a lot of hams since we're told
it is selling far fewer copies than the paper version.

Fish that I am, I bought a copy on CD, and I'm here to
tell you that there isn't sufficient added value to justify
the price premium. In fact it is downright aggravating
to use in my mostly non-Microsoft environment.

With all due respect, why do you guys continuously crosspost this diatribe the Satellite newsgroup? Speaking for myself, I cannot see where anybody here cares about the CW/H.F. privileges, it is a non issue.

You guys are so wrapped up in disputing the now commercially worthless H.F. segments that you have lost focus on what the commercial sector really wants and is lobbying for, two meters and UP for satellite work.

I cannot help but wonder if the FCC and the lobbyist have struck a deal and this restructuring is a way to wean us off of the upper bands.

Free your mind.......

That's why you send it out to an electronic document house in the
Philippines. The going rate to rekey paper documents is 50 cents
a page. (OCR isn't that good yet, rekeying is the way businesses
archive their old paper documents electronically today.)

As usual, wrong again, Dick. My parents drove me 200 miles
round trip in a '46 Chevvy to the Houston FCC office in
1951. The only alcohol I had was Hadecol (sp?), 30 proof :-)
I often wondered why that stuff made me feel so warm and
fuzzy.

We each have our own standard of worth. On the CD-ROM medium you have
full-text searchability and hyperlinking, and it's physically small
compared to the book. Some consider those features valuable; others
don't. Some find the propagation tables valuable; others consider them
"filler material." To each his own.

My daughter was really upset at Christmas. In 1993, she gave
me a copy of _The_ARRL_Handbook_ for Christmas. It cost her
$25 in hardback. Last Christmas, it cost her $32 in paperback.

That will occur at any price point -- some will want it at that price,
some won't. Heck, most people in the world wouldn't want an Antenna
Book CD if we were giving them away. (Particularly the non-English
readers!) Why should your personal threshold be the determining factor,
as opposed to someone else's?

Because it's my personal money that's involved, Jon.

If you don't want to consider a customer's input, you
are perfectly free to ignore it.

One might conclude from the evidence that, for some reason,
the ARRL would simply rather sell books than CDs.

2948. Stacking Pwr Supplies?

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-22 00:00:00 UTC
From: kg4fet@aol.com
Message-ID: <20000122103035.03575.00000933@ng-cf1.aol.com>
Source record: 120798

I need to stack 2 pwr supplies to supply my FT 100 with the proper current. My AIM 20 is getting to hot for my tastes. I get full out of the radio but the supply is way to hot if I do any rag chewing. I put a fan on it and that seems to help but I would like to take it easier on it. Here is the question. Can I hook the second supply directly to the the AIM's output or should I use a bus strip? The second supply is a Johnson Power 15 amp rated supply used for a Johnson business band base radio. The output voltage is the same on on both (13.98+/-.03 volts). There is not a switch on the Johnson pwr supply to turn it off, but that can be fixed.
Any Help would be appreciated,
Sandor KG4FET

2949. Bad Laws and Censorship by/of Government Communications

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-22 00:00:00 UTC
From: You <spam@me.now>

The 106th Congress is trying for more restrictions with the H.R. 514 bill. Representative Heather Wilson and members of The Subcommittee on Telecommunications, Trade, & Consumer Protection started this bill. This bill adds frightening restrictions by requiring the removal of the
SMRS and PCS radio band in radio scanners. SMRS is the Motorola iDEN (e.g. Nextel "Direct Connect") 2-way radios used by Government and in the same radio band as Government public-safety radio systems. Current radio scanners can not decode digital Motorola iDEN. Also, note that radio scanners do not effectively receive PCS because it is very short-range microwave and digital. PCS in fact is bad for mobile

communications because all-direction (Omni-directional) antennas have large signal losses at these high frequencies. Because of this, PCS requires micro-cells or many more cells compared to original 800 MHz cellular. PCS would be better for non-mobile use with fixed directional antennas. As you can see the push by commercial interest and greed for H.R. 514 will lead to restricting Citizens from monitoring
our Government services. It will deny the Citizens ability to have future radio scanners that can decode the new digital modes used by our
Government services. It sounds good when they say it is for your privacy but in reality gives them the dangerously increasing power to close
Government radio communications from the average American. Stop H.R. 514.

H.R. 2369 enacted by the 105th Congress was bad enough and needs corrected.

Cecil, I have to say that at age 15, I did take pride in obtaining my General. When I get a chance I will ask my parents why they didn't take me to see a psychologist for this abnormal behavior. I also took pride in high school wrestling, good grades, honesty, ect. What a warp individual I must have been. Thanks for bringing this to my attention :)

Ed, I can't comment on how the exams were in 1963, I wasn't born until then. I guess if I did pass prior to age one, I would have to admit that the testing was much easier then. :)
However, I took my General exam in the late 70's it was much harder than what I see as questions today. I did find the code requirment much easier than the theory, probably because I was just getting into Algebra at that age and there seemed to be a lot of formulas that I had to know that were difficult to understand. However it did lay a great foundation for growth.

Oh by the way, when I took my General, the exam was tube theory. After passing it I took the Advanced the same day and it was solid state threory. I was one confused teenager (Maybe thats what triggered the pride thing... Cecil :)) They were in the middle of changing the exams.

Best Wishes,

Timothy Fiebig K2TF

2955. INVITATION TO 3 ANTENNA REFLECTORS (Lists)

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-22 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000122113346.03694.00001289@ng-fm1.aol.com>
Source record: 120805

QST--

You are invited to join one or all of the following lists on onelist. All these reflectors are e-mail based, and moderated so that no spam, porn, off-topic, or personal-offensive posts are sent out. You will receive no off-list e-mails by subscribing: again; no spam.

These lists (with average recent subscriber sizes) are:

ANTENNAS@ONELIST.COM 120 members
CROSSFIELDANTENNA@ONELIST.COM 60 members
FRACTALANTENNA@ONELIST.COM 210 members

Please review the descriptions at

http://www.onelist.com

Please note the CFA list specifically deals with this antenna in an objectively critical fashion and no posts will be allowed that make grandiose claims without supporting data presented. To date, no data has been presented which requires the extraordinary claims made by some pundits: there is no evidence for better performance than any other small vertical antenna (and that performance is poor).

To subscribe to any list, either go through the process at onelist, or to skip the process just do:

---------- -subscribe@onelist.com

where the ---------- is the name of a given list (such as 'fractalantenna')

I can get HTX-10's at near wholesale prices. For the price,it seems to be a decent radio & it would fulfill my needs for overseas rural applications (outside of the FCC's reign of enforcement). It would be even better if it could be modified for extra frequencies! After all, there seems to be quite a few "export" models easily available with all modes & extra channels but, as I said, for the price, this would be really be ideal! Any info could be e-mailed directly to me to avoid publicly posting. Thankyou, newtech@prodigy.net

The League seems to have adopted the view that because this
media is "Advanced Technology", it is worth more. That's
contrary to reality. Advances in technology are supposed to
reduce costs while increasing usability and efficiency, not
the other way around, and in most other cases they do.

For info there is an internet
discussion list I've run across
that is related to NVIS HF radio
and other "low-profile" antennas
and related subjects.

If you have an interest in low-profile
HF radio antennas and communications,
we would like to stimulate some discussion
in this area..

There's currently about 25 subscribers
and apparently, the group has not
advertized itself very much..

you can link there by going to:

<http://www.onelist.com/community/nvis>

or via email, by using the following
addresses:

Nice post Mike! Good Luck!

Being an Amateur for over 10-years, and having attained my license
before the advent of no-code, and still enjoying all aspects of
CB radio, I"M ON YOUR SIDE!

Keep working hard and ask yourself WHY amateurs who HATE CB come
here. They are not superior operators because of the license
they hold. They are inferior humans by trying to talk down to the
next guy based on their inadaquacies.

Dino...K6RIX

With no previous radio or code experience I went from CBer to extra in 7 months,I didn't learn a damn thing from the question pools.What little I know I learned from hands-on and doing a lot of non-question-pool reading.
Whwn the ARRL looks back in 20 years I hope they're happy with what they did to this once great hobby.

I like this!!

> BRINGS up an interesting question - when WERE the exams
"difficult" -
> only when *I* took them...?

It sounds an awful lot like my dad, with the "I had to walk three miles
to
school everyday, even in bad weather. And if our shoes had holes in
them, our feet got wet!" But I guess my dad was pretty well off. I've
heard from others their dads would claim they were barefoot in the
winter.

Lesson one John-Bowl, anybody can post through a proxy like proxymate. You must be either a moron John-Bowl or telling a lie to cover your tracks. In your case both to use such a pissant story like that. Quit harassing the newsgroups Toilet-Boy.

> Further, I never saw anywhere that the person posting under the ID
> of KJ4SO claimed to be a amateur radio operator or that it was
> a callsign.

So that means it wasn't you Toilet-Boy, right. BAWAHAHAHAHAHAHAHAHAHA! You sound like a 4 year old. Over the last 3 years not a single person has hung around to defend you 350 off topic posts, your internet stalking, your forges and your other nonsense. Your only defenders are hotmail, dejanews and AOL accounts John-Bowl and they are gone inside a month.

> Get a life, Blake!

Blake seems to be doing quite well John-Bowl other than you stalking him. You need to get back on your medications.

What I would like to see is getting away from Windows only format and readers. Why aren't they done in a html, pdf, or other more widely cross platform. I run Linux as my primary system and would much rather use it then Windoze. Plus if done that way the readers don't have to be maintained by the provider. A user can use their favorite reader.

The following items are for sale or trade (or both) make reasonable offers.
mailto:mcguyver@bv.net

FS: 486/75 Color T2115CS Laptop w/ W95, 8MB ram, 14.4 PCMCIA modem w/o cables , 350MB HD, 3.5 floppy and 2 PCMCIA ports. Works great, keyboard trackpoint (w/o rubber), plugs into wall directly, battery is dead, AC directly into machine works
fine. Sell $300 w/case OBO

I have a Fluke Model 87 III True RMS DMM with leads, no case or rubber for sale, I will sell for $170 shipped

1 pc
DONGAN Multi-former Model LJH-90A
120VAC input (primary)
10,000V/60Hz output (secondary)
New in Box (photo upon request)
sell $100 obo plus shipping

EF johnson VHF handi talkie, w/o antenna connector. Unit will work fine when charged and antenna connector added. With 9.6V 1Ah battery
Sell $150

2- Sony C-Mount CCTV Lenses for ccd cameras
12.5-75mm zoom with manual aperture. 1 with Lens cap included. Both have sun shield
$125/each

1- CANON C-Mount CCTV Lenses for ccd cameras
12.5-75mm zoom with manual aperture. Both units have sun shields
$125

Advanced Modular Solutions Model # MS/16+ Portable 486dx50 computer. Runs on 12VDC adapter (included), standard
PS2 keyboard and mouse. Runs a standard SVGA monitor also has 16MB memory, Built in TCP/IP module via RG
connector on back. 1.2GB HD, very small unit, a bit bigger than cigarette carton. O/S loaded are os/2 and W95...Great buy
for portable computer. 2 DB9 com ports and 1 DB25 port. No floppy.
Photo upon request
$200

Mobilcomm - Voice Organizer Pager. Model 9601 Voice recognition pager stores numbers and appointments and IS A
PAGER ALSO ! Recognizes your voice to pull up telephone numbers or dates. Runs on 3 AAA batteries, complete

instructions included. Paid well over $200 for it orig. Sell for $50

Misc

100+ pieces LM317t Positive adjustable voltage regulators, TO220 size,
NEW and unused make offers

Vicor VI-J52-IZ
DC-DC converter 150VDC input (@35W) output 15VDC @25 W
$25

At the price it would be more fair to allow them to placed on a network, directly forbidden by the disk license. This way a group/club could buy them and have them available. But, at this point I believe that would be a problem since they are not a MIME compliant format (I could be wrong, if I am please point to the info that proves I am wrong, we are all always learning.

Technically I am in violation. I have several older 2x SCSI CD-ROM drives on my central machine at home and access them through my home network.

But, I now remember that the ARRL is more interested in making money then to easy acces to ham related materials. After all, it is the publications that do provide the greatest revenue.

Maybe even have it as part of your membership privileges. On-line access to the CD-ROM publications. I know that when working on a project I might want access to some info in one of them. But, it isn't worth spending $30-$40 for the book for that one piece, plus waiting for delivery. If this was available, it might even cause me to rejoin by the ARRL showing that it IS INTERESTED in caring for and providing for the member, not the other way around.

Fred, it is customary to post AFTER and not before the others comments.
Just so you'll know for future reference. I posted from the top so
that you'll see it.

Wow a day when ONE general could administer a Tech exam. When was that?

In ham years I'm just a toddler, but I remember Tricky Dick. He went
down for doing wrong. Isn't that the way its supposed to be?

In article <862ofn$1di5@edrn.newsguy.com>,

MFer, I really don't like what you are implying. As far as hidden
agendas go, why the MFing screen name "MF Luder?"

Here you go Doc, from the deja.com archives.

Hello and Greetings from the Better Amateur Radio Federation!

I hope this message finds everyone ok. Looks like we made it. I would wait till Monday, when the Stock Market opens.

I want to take a few minutes of your time to let you know of some new things the B.A.R.F/ARG/Stumpjumpers/Liberty Net plan to do for the year 2000.

"Liberty Net 2000" This will be an all-new Website.

I want to say to all White, Liberty minded folks that we can claim this next Millennium. For the prize is about to be won. We can fight back and re-claim everything that has been taken away from us. It's time we folks who live in the South claim back our states rights and raise a New Confederacy. We all need to pray for this next year. God is sick of the sins of this country. REPENT AMERIKA! God is about to judge this Nation!

I now want to address the Ham community. This new FCC rulemaking is a step in the right direction. For many years now, old gas-bag extra class hams have kept us no-coders from having to get on HF. We will use to our advantage.

We have great things planned for the Liberty Net this year. We will step-up our look-out for jammers and potential recruits. Look for a reversal in the David Castle case this year. Ol' Davy maybe listening to 3950 from Leavenworth!

They did "chastise" (spelled correctly) Steve AA8DP and that's a good direction. Granted a little late in coming but never the less,..... I think that the instigating and goating, not to mention trolling this NG should stop. At least as long as things are going in the right direction. Also, I hadn't planned on having the files blocked/removed but .....?
Ps. here's how you spell "censorship".

Source record: 120963

Lloyd you are some piece of work, the FCC just handed you an avenue that most children could pass to earn a ham license with HF privledges and you want to whine "help me" "I have a hard time with learning the code". You still don't get it, the reason a lot of the higher coded hams are pissed off is because the code is so hard to learn and takes lots of time and effort to master.

Why don't you just get off of your lazy ass and study for couple of months and pass the 5 wpm code test? Or is passing the 5 wpm code test to get a higher class license now not worth your time either? You have got to be the laziest person on the planet.

>If you aren't involved why defend them ? The joke is a cliche and while
>it might elicit a brief chuckle, does not belong here. It only serves to
.point the level to which hams have sunk, male and female.

Isn't it funny how a silly comment, thrown into a silly discussion, can spawn a whole other silly discussion? Gotta love this internet! What a study in human behavior.

The basic paranoid idea that there is some sinister uber-culture steering the ARRL and manipulating the election (did I spell it right?) process is quite stupid and deserving of a stupid joke to poke fun at it.

Brent,

You make a valid point here; and it got me thinking. I am also an avid CW advocate. I started using the mode early on in my Ham life as a necessity. When I upgraded to General and used SSB it played havoc with the TV and radios in the house. My parents and my sister wanted to kill me! I could happily send CW until the cows cam home with no problems however, so CW became and 22 years later remains my favorite mode.

When the restructuring and lower CW speed requirements were announced I immediately became a bit upset. But as I thought about it, what angered me most wasn't that the CW requirements have become belittled; but it seems again we are again descending down the slippery slope of mediocrity.

I first tried for my ticket in hight school. Armed with an old Ameco LP, I set out to learn the code. For whatever reason, I couldn't "get it". I gave up. After college and starting a career, the bug bit again (no pun intended). This time I enrolled in an evening adult continuation program at a local high school and began my second try. This time learning the code was easier; and I earned my Novice. To this day, I consider that one of the crowning acheivements in my life! I conquered an old bug-a-boo with diligence and hard work; and darn it .... I EARNED IT !!!!!!!!! General, Advanced and Extra came as the years have gone by; but none came with as much pride as that first Novice ticket!

Now it seems we're all too eager to give away the privilege of an Amateur radio license. I'm sorry if I seem cynical; but I really don't believe that with the loss of the code speed requirement that " a more difficult and comprehensive" written exam will take it's place to keep Amateur Radio as a service where your ability to participate must be earned.

I indeed think we are now travelling down the road where 10 or 15 years from now certain folks will be asking "Why do we really need to take a test to become a Ham?" And that day, will be a sad one for sure.

I once had a boss who would absolutely never let us give any "freebies" to our customers as perks. His reasoning was; and I quote .... "If something is given away for nothing, then it has no value." I came to understand his wisdom.

Mods are a part of the amateur community, also... There are some of us that are involved with the MARS program that requires us to transmit outside the amateur bands. I happen to be one of them, and the only reason I attempted the mod on my IC-706 was for that very reason, and it works great. Just don't transmit where you are not supposed to, and you have nothing to worry about.

That's true Ed, aside from the smaller reproduction costs, the costs
of producing the volume on CDROM are essentially the same as the
costs for publishing a paper book. So why is it priced 3 to 4 times as
high?

>In the CD products, there are additional costs involved, in setting all
>the internal linkages, the search engines, adding the software and
>template packages that also go into the product, to say nothing of the
>fact that ARRL has never had to spend staff time offering a customer
>support when he is having difficulty opening a book.

Having on-board hyperlinks and search engines are nice (if you run
Windoze), but not so nice as to justify the price premium. I'd be happy
to use my own search tools to form a permuted index, and cut and
paste URLs, if that's what's needed to get the cost down to the level
of paper volumes. I have to anyway, since I use Linux, not Windoze,
and the supplied engines don't work for me.

You really should publish in Portable Document Format to be compatible
across the various platforms out here (and the PDF reader is *free*),
instead of leaning so heavily on Windoze. You're cutting yourself off
from at least 30% of the market by tying yourself so tightly to Microsoft's
coattails, and it's the part of the market that's most computer literate at
that, and thus most likely to be a customer.

Alternatively, you could publish in HTML so that any machine supporting
a browser could read the volume. There are good (cheaper than paper
publishing layout software) HTML publishing tools available which automate

translation of plain text to HTML. Since virtually everyone with a computer knows how to use a browser, support costs would be minimal too. The only downside is that HTML is bulkier than PDF, but your CDs aren't full anyway, so that shouldn't be a big issue.

>No, it costs less to DUPLICATE CDs than paper books. When volume is
>large, that particular cost dominates the cost side. When volume is not
>large, that cost may very well not dominate.

According to our internal publishing figures (Gannett), the break point where pressing CDs becomes cheaper than a paper book is around 1000 copies. (For much smaller runs, we burn CDRs.) We're a *big* print publisher who buys ink and paper by the train load, but we distribute our internal training materials on CD because it is cheaper to do so than to set the job up on our presses and warehouse and distribute paper books. Printing daily newspapers is still done on (cheap) paper, of course, because that's what the customer wants, but it isn't necessarily the least expensive way to distribute the information.

Document preparation costs are virtually the same regardless of how we publish them. So the distribution medium is the primary variable with respect to costs.

Joe, yours is one of the more interesting and enlightened comments in this thread. For a start I am English (or Brit call me what you like) I spent 5 months living and working in Colorado last October. Whilst there I had my own Radio chat show slot on American Freedom Network (KHNC out of Johnstown) I used to have a 2 hour show every Saturday. AFN is only a small network and as such I used to have to do my own research for my show, the long and the short of all this is that some of the stuff I learned and uncovered would make your hair fall out.

You DONOT live in a free country anymore, and neither do I in England. If you think I am some kind of nut then I am sorry ,but I have to tell you that some of the stuff I aired and some of the interviews I held with prominent and well informed people lead me into hot water so much so that the FEDS paid me more than one visit, I was about to be held on some jumped up charge about being anti American. Nothing could be further from reality, I love your country and the American people, I am very sad that they have let themselves be hood winked by nothing but a group of Communists (Bill Clinton and the Democrats) Anybody who belongs to the Council on Foreign Relations CFR, The Trilateral Commission, The Bildaberger Group, Who is a 33rd degree Mason, and a member of the illuminati (yes I am talking about your beloved President Mr Clinton the antichrist) has to be more than a little suspect. Just look at some of the Executive Orders he has signed, ask yourselves why he would he want to get into bed with the Chinese, who now control both ends of the Panama Canal. Ask your self what is the real function of FEMA (Federal Emergency Management Agency) and why there is over 160 EMPTY prison camps that will hold up to 5,000 people each dotted all around your country. Ask yourself why the IRS has decided to spend $ 100 million of your money arming themselves to the teeth. Mr Clinton does not give a rat's ass about America or the American people, he is a Globalist, he is a ONE WORLD GOVERNMENT man along with his partners in crime Tony Blair and all the other cronies around the World. Make no mistake when he leaves office his next move will be to the top job at the United Nations, if he gets it then it will really hit the FAN in a very big way and its goodnight America and the rest of the World you will have kissed your ass and sovereignty goodbye. By now you are all thinking that I am definitely a raving nutcase, all I can say is watch this space. By the way I left America before they the FEDS that is had the chance to put me in leg irons and lock me up in the Marion Prison.

Regards

That and the fact there is no way to enforce it. There is a small town south of Cleveland Oh that banned cell phone usage. Seems they stopped people if they saw them using the phone AND stopped people that looked like they were talking on hands-free phones. Turned out that 80% of those stops were for people singing along with the radio.

The law was modified to prohibit the use of cell phones that did not have a hands free operation. Allentown fell into that trap too. They'll be back with prohibiting hand held units but not hands free units.

3015. Re: Farnsworth for 5 wpm test?

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-23 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <388BB3B5.8CE5F98C@dialpoint.net>
Source record: 120591

Farnsworht is the method where the individual characters are sent at a faster speed and the spacing between them is so the overall speed is slower. That is they are sent at 15 or 20 wpm but spaced so that at the end of several characters the overall speed will be only 5 WPM.

Regular is where each character is sent at the 5 wpm speed.

The test can be given by either method depending on the examiner and maybe the wishes of the people taking the test.

It is thought by many that if you learn the character at the speed you want to eventually obtain it will be easier in the long run. This is the Farnsworht method.

3017. NEW Email List for finding Boatanchor auctions - Easy

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-23 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <86gfc0$5s8$1@ns2.foothill.net>
Source record: 120593

NEW EMAIL LIST is now set up for the posting of
notices of "AUCTIONS" for tube era items..

Not only are there notices of URL's of internet commercial
auctions, but also one can post their own auction. A
suggested form is even available for preparing one's own
auction and can be found at:
http://www.egroups.com/group/boatanchor-auctions/8.html?

For "boatanchor" related items. For our purposes, "Auctions"
mean items listed for sale without fixed prices. Postings
may be as simple as "$150 obo", or formal auction terms,
or the announcement of a URL at which there is an auction
(e.g. an eBay address, etc.).
"Boatanchor" may include old tube type broadcast radio stuff,
but not recent audio gear, tubes or parts.

Subscribers have the choices of:
1. Receiving each email posted by each subscriber.
2. Receiving all emails once each day in one message.
3. Receiving a digest once each day of just the "subjects"
and "authors" of each message.
4. Receiving no emails. but allowing subscriber to go to
egroups.com and selecting this LIST
"boatanchor-auctions@egroups.com" and then
selecting which messages to view by "subject"

To subscribe to boatanchor auctions list
SEND boatanchor-auctions-subscribe@egroups.com
Note: Singular "boatanchor. Plural, "auctions' and
"egroups"

RULES will be simple:
Post for tube era related items only, for which firm prices are
NOT stated.
NO radio program tapes, magazine cut-out ads, CB stuff
(except linears tuned to Ham Bands), or tubes or
parts for the audiophile market.
Please refrain from claiming something is "rare" unless
certain almost anyone would consider it rare.
Post only once for each auction. (No followup messages)
PLAIN simple TEXT ONLY. (Not even a background color)
Use descriptive "Subject" headings.
Include closing dates where appropriate

FOR THE NEXT FEW DAYS (after 1/22/00) emails may
contain some advertising. That should end when egroups
receives my check, which has been mailed.

To change the mode by which you receive messages
(Every message, all messages at once daily, all message
headings only once daily, or go to egroups.com and select
messages to read)
GO TO: http://www.egroups.com
SELECT: "My Space" button
Then SELECT the group for which you wish to change
your mode of receiving messages.
SELECT: "Group Info" button on bar.
SELECT: "Modify Subscription" button at bottom page.
Then make the changes.
SELECT: "Apply Changes" button

THIS MESSAGE MAY BE FREELY COPIED AND
REPOSTED in its entirety.

A LIST is now set up for the posting of "AUCTIONS" for
HAM related items (NOT TUBE era stuff). For our purposes,
"Auctions" mean items listed for sale without fixed prices.
Postings may be as simple as "$150 obo", or formal auction
terms, or the announcement of a URL at which there is an
auction (e.g. an eBay address, etc.).
"HAM" does NOT include audiophile gear, tubes or parts,
or CB stuff except linears actually tuned to only Ham Bands.

Not only are there notices of URL's of internet commercial
auctions, but also one can post their own auction. A
suggested form is even available for preparing one's own
auction and can be found at:
http://www.egroups.com/group/ham-auctions/7.html?

Subscribers have the choices of:
1. Receiving each email posted by each subscriber.
2. Receiving all emails once each day in one message.
3. Receiving a digest once each day of just the "subjects"
and "authors" of each message.
4. Receiving no emails. but allowing subscriber to go to
egroups.com and selecting this LIST
"ham-auctions@egroups.com" and then
selecting which messages to view by "subject"

To subscribe
SEND TO: ham-auctions-subscribe@egroups.com
Note: Plural "auctions" and "egroups"

RULES will be simple:
Post for HAM related items only, for which firm prices are
NOT stated. Not for tube era gear, another LIST
has been set up for that.
NO radio program tapes, magazine cut-out ads, CB stuff
(except linears tuned to Ham Bands), or tubes or
parts for the audiophile market.
Please refrain from claiming something is "rare" unless
certain almost anyone would consider it rare.
Post only once for each auction. (No followup messages)

In fact the buyer did pay more ($51) than the MS-8 speaker costs new ($49) from Drake. The shipping costs through Ebay is $10 and $9.80 from Drake. I cannot understand why a buyer would do this when any search engine would have given the new price. Ebay fever I guess.

I've read that. I just don't see the difference in concentration between conversing with a person on the phone, or conversing with a person in the passengers seat. In fact, the passenger might be worse, since you have a tendency to occasionally take your eyes off the road and look at them...

>Look at how most people stare into space while talking on a phone

If there is no person to look at when talking on the phone, looking at nothing in particular (staring into space?) seems reasonable...

>and most people I've asked, after 'watching themselves' one the
>phone a few times, say they experience the same thing.

Do you really go around asking people to watch themselves when they are on the phone? How do they do that? Use the phone by the mirror??

Its not free now but you people sure as hell are working on it.. If I could pass the test anyone could..
I aint real good at code but I passed the thing without bitchin.. Its what I had to do.. I passed the written because Its what I do for a living but there are lots of guys that pass both.. Why? They thought ham radio was worth working for... My wife passed her test for no code tech and has been working on the code.. Now she said "their going to give the thing away.. all that work down the drain." I told her its not down the drain but there will just be fewer real hams and a lot of free loaders.. After a while even filling out an app. got to be too much trouble for the CBers.. pretty soon they will be getting rid of the written too.. Do you now what that will make us.. CBers.. IT IS RADIO WELFAIR.. You dont want to work for it.. Hey you have a right to have it.. I want it FREE! Well if we make it so easy what have we got.. NOTHING.. not a damn thing! Like America its going to Hell in a hand basket..
dumb it on down.. Packet is going and RTTY because they cant read.. Give them the paper..

Two points:

1. The cited jamming by W9ART definitely occurred: listen to the
.wav file. It's made quite clear on 3950.net that it happened _last_
Saturday, not this evening.

2. How can you have a friendly QSO, as you did tonight with W9ART,
when you know that just a few weeks ago he was on the air jamming
and stating that another amateur "should be shot in the head"?

With all good wishes,

Kevin, WB4AIO.

Well I'm glad that you clarified that kevin. Your post made it sound as though he was jamming this evening.
Kevin I can can have a friendly QSO with anyone. The fact that you, W1WCR, and the net, have a problem with a particular person does not obligate me to refrain from speaking with them. I have had nothing "but" friendly qso's with w9art and have had none of the problems that you and the "net" seem to be experiencing. As for a threat that was made, it sounded more like an opinion to me, either way I don't take it seriously. I have heard, and have on tape Vic saying similar things about people in the political arena. Should I assume that Vic was serious? I'm sure that you find it advantageous to assume that art was. It keeps the pot stirred up doesn't it?

Newsline 1171

CALL-UP AND BILLBOARD

Newsline report number 1171 for release on Friday, January 21st, 2000
to follow in

5-4-3-2-1.

The following is a Q-S-T. The world of Amateur Radio reacts to
restructuring in the United States and the questions will be ready on
time. These stories and a lot more on Newsline report number 1171
coming your way righ
t now.

(Billboard Cart Here)

*****

RESTRUCTURING: AUSTRALIA TO USA - YES!

The first overseas reaction to restructuring the United States Amateur
Radio service is in and the Australians like what they see. Q-News
Graham Kemp, VK4BB, has more:

First official reaction from the Wireless Institute of Australia to the
recent restructuring of the US Amateur has been reported by VK7 WIA
news Director Tony Farrow VK2TGF says as part of a brief to seek
opportunities fo
r increasing the popularity of amateur radio in VK he has been
monitoring changes to the AR service made in other countries. Such as
the USA and in the UK, amateur repeaters with the Internet.

Tony said it's encouraging to see both the British and US authorities
explicitly expressing the desire to encourage more people to contribute
to Amateur Radio experimentation.

>Im Graham Kemp VK4BB of Q-News Australia for Newsline.

If the reaction from Australia is any indication, the rest of the world
should also be positive toward this FCC ham radio restructuring action.
(Q-News)

RESTRUCTURING: NEW QUESTIONS WILL BE READY

When April 15 th rolls around, the new questions to test prospective and upgrading hams will be ready. This as the Question Pool Committee of the National Conference of Volunteer Examination Coordinators announces a proj
ected roll out date of February 1 st for all new exam elements. The Rain Reports Hap Holly, KC9RP has been following the work of the Question Pool Committee and has this report:

--

The NCVEC Question Pool Committee has been working feverishly since the report and order on restructuring was announced. Fred Maia W5YI, is Vice Chairman of that committee:

+++++

Maia: "Normally, it takes us a year to revise a question pool. And here it is January and we had not even selected the questions yet -- much less turn the questions over to the various publishers.

It was decided that we would have to have a very streamlined schedule. That schedule would involve the three remaining licenses and developing question pools for the Technician, General and Extra and getting this complet
ed within 30 days.

That was an impossible situation, so instead it was decided that we would come up with a system that will keep the current [study] manuals in the publishing marketplace as reasonably valid. In other words, if an applican
t for an Amateur Radio license picked up an ARRL study manual for elements 2 and 3A -- the Novice and Technician -- those questions for the most part would be carried over to the new element 2 which is the new Technician.

The questions to the old element 3B General to the new element 3 General and the questions in the combined element 4A Advanced and 4B Extra would be carried over to the new element 4 Extra class."

+++++

The entire interview with Fred Maia W5YI is on the web at www.rainreport.com
>I'm Hap Holly KC9RP, in Chicago for Newsline.

If you have not read the report and order on restructuring the United States Amateur Service, we have it available for downloading at our website in Microsoft Word. Go to www.arnewsline.org and it's the first thing you w
ill see at the top of the page. (Newsline, RAIN)

**

RESTRUCTURING: LICENSE VERIFICATION FOR OLD TECHS

If you are a Technician class ham who was licensed prior to March 21 st 1987, then on April 15 th you can apply for a General Class upgrade without taking a test. But only if you can prove to a Volunteer Examiner that y
ou really have passed the qualifying exams. If you still have your original license document you probably have all the evidence you need. If you have lost it you will have to find another way to proving that you are wha
t you say. Now, the FCC and a publisher of a C-D ROM based call directory are both here to help.

We start with the FCC which says that it will try to provide such verification if you send a request by mail. You must include your name, address, telephone number, date of birth, and the original call sign issued to you
when you first got your Technician class ticket and the date you think it was issued. Requests go to The FCC, 1270 Fairfield Road, Gettysburg Pennsylvania 17325. Mark your request to the attention of The Amateur Sectio
n.

If you have a computer, modem and access to the World Wide Web, then you might want to try www.qrz.com. That's the website run by Fred Lloyd, AA7BQ, for his Q-R-Zed callsign directory sales. And, as a free public servic
e to the nations ham community, Fred has posted a copy o the 1993 FCC call sign database at the site. If you are one of those old Tech class license holders, try going www.qrz.com/search1993.html. Let the page load, ent
er your call sign and click. If the information proving your license was issued prior to the March 1987 date, you can print out a copy for your files.

By the way, as we go to air, the National Conference of Volunteer Examination Coordinators has not made public what proof it will require to handle your instant upgrade. Until they do, it's a good idea to collect all the
proof that you can get. (FCC, ARRL, AB7BQ)

*****

NEW ARRL LEADERSHIP

Some late breaking news from the ARRL. The League's Board of Directors has elected Dallas Texas businessman Jim Haynie, W5JBP, as its first president of the new century. This as the Board holds its first meeting of the
year 2000 in Memphis Tennessee.

Haynie succeeds Rodney Stafford, W6ROD and becomes the ARRL's thirteenth president . The Board also elected Joel Harrison W5ZN as its

first Vice President. He replaces Steve Mendelsohn, W2ML, who made an unsuccessful bid
for the office of ARRL President.

Atlantic Division Director Kay Cragie, WT3P, and the Roanoke Division's John Kanode, N4MM, were also given Vice Presidential slots. Current Vice-President Hugh Turnbull, W3ABC, was elected as an Honorary Vice President o
f the League.

Outgoing ARRL President Stafford was elected as International Affairs Vice President, replacing Larry Price, W4RA. Price was elected as president of the IARU last year and had decided not to seek another term in service
with the ARRL. (ARRL Letter)

RESTRUCTURING BACKLASH: FIRST REQUEST FOR RECONSIDERATION FILED

A small group of hams who are obviously unhappy with the FCC's Report and Order to restructure the United States Amateur Radio Service have has filed a petition for partial reconsideration. The three hams behind the fili
ng are identified as Alan J. Wormser, N5LF Frederick V. Adsit, NY2V Michael J. Dinelli, N9BOR.

Their twenty-one page petition essentially boils down to two basic complaints. First, that the FCC is "dumbing down" the Amateur Service by not concentrating on the technical aspect of the hobby. Second, they claim that
fast code should be retained for the Extra Class license.

Regarding the dumbing down charge, the three petitioners say that the total number of questions in the testing pools is going to be reduced. As a result the proportion of questions related to technical matters will be re
duced in favor of questions about rules and operating procedures.

As for the code, they press the importance of CW as an essential skill. They say that the 5 word per minute General class exam is adequate accommodation for people with disabilities. Under their proposal, there would be
no Morse code waiver whatever for the Extra Class license.

The Wormser Adsit, and Dinelli petition may be found on the WWW at http://www.qsl.net/n5lf/.

> For Newsline, I'm Bill Pasternak WA6ITF in Los Angeles. Fred. (Handi-Hams Newsletter, others)

RESTRUCTURING: DON'T COMPLAIN TO RILEY

If you have questions, comments or complaints about the restructuring of Amateur Radio, please do not address them to FCC Special Counsel for Amateur Radio, Riley Hollingsworth, K4ZDH. He can't help you because his depar
tment had nothing to do with writing the document and is not in a position to comment on it:

Hollingsworth: 'I've been getting a lot of questions about restructuring. I want to emphasize that issue is a Wireless Telecommunications Bureau matter. You recall that they handle policy and rule-making regarding the
Amateur Service as well as licensing. By agreement, we in the Enforcement Bureau just handle the enforcement aspect, so as much as I might like to it isn't appropriate for me to answer questions or comment on the restruc
turing.'

And what will restructuring mean for his department? Hollingsworth says that it will not greatly impact on enforcing the rules:

Hollingsworth: ' Enforcement will continue unabated. There is nothing in the restructuring item that causes me any concern at all from an enforcement standpoint.

Basically, for any program to work it has to have two things. One is a basic set of good rules and -- two -- the willingness and resources to enforce them. We have both of those for this Amateur Radio program, so I am n
ot worried about that at all.'

Hollingsworth indicates that as far as enforcing the rules, nothing will change. (RAIN)

*****

ENFORCEMENT: CLEMSON SC EXAM SESSION INVESTIGATION UPDATE

The FCC has upped the stakes in its investigation of an Amateur Radio exam session held in Clemson South Carolina on July 14 th 1999. This as several people say that they were not at the session and have no idea how thei
r signatures got on a manifest of candidates whom the V-E's claim had successfully past their Amateur Radio exams. Newsline's Bill Burnett, KT4SB, reports from Miami:

The latest revelations come in January 13th letters from FCC Special Counsel for Amateur Radio Riley Hollingsworth to two William J. Browning of Pendleton and Eugene D. Watring of Iva South Carolina. According to Hollingsworth, both served as Volunteer Examiners and managers for various exam elements claimed to have been administered for the July 14th 1999 session. Now, both are now being asked to explain
how signatures purported to be from several people who were not at the session got on the manifest document.

Specifically, in relation to Watring, the FCC says that it has confirmation from a Mr. Grady P. Robinson that states that he was not present at the session. Also, that he did not sign any documents relating to it.

In relation to Browning, the FCC says that both Mr. Eugene D. Matring and Mauriece D. Martin have filed statements with the Commission certifying that they were not present at the session and did not sign the manifest.

Hollingsworth has mailed both V-E's copies of the manifest and Form 610's from the session. He has given them twenty days to explain in detail the apparent discrepancies. Hollingswoth adds that Title 18, Section 1001 of
the United States Code provides for criminal penalties.

But thats not all. Hollingsworth's letter to Browning says that the agency has received allegations that Browning has -- and we quote -- "physically threatened one or more of the Volunteer Examiners whom your documents i
ndicate participated in the July 14, 1999 session at
Clemson." -- end quote.

Hollingsworth cautions Browning that if such allegations are true, this information will be turned over to law enforcement authorities, including the United States Attorney, in Brownings jurisdiction.

> From Miami, I'm Bill Burnett, KT4SB, reporting for Newsline.

The audit and investigation of this session is expected to continue for some time. (FCC)

**

ENFORCEMENT: ALLEGED Y2K JAMMING BRINGS WARNING FROM FCC

Still with enforcement news, the FCC has warned Michael D. Adams, AE4FB, that it believes that he was the one who deliberately interfered with a an Amateur Radio Emergency Service Y-2-K Standby Net operating the evening
December 31st 1999 on 3.878 MHz. The complaint alleges that the Doraville Georgia ham caused deliberate interference to net operations.

Adams has been given 20 days from the date of the notification letter to respond to the complaint. The FCC says that Adams response will be used to determine what further action, if any, will be taken in the case. (FCC)

****

ARRL: PRB-1 FOLLOW-UP

As reported last week the American Radio Relay League is asking the FCC to reconsider its denial of a League request to expand the scope of PRB-1. Rick Lindquist, N1RL, of the ARRL Audio News, has more:

The ARRL wants the FCC to declare that its limited federal preemption policy
known as PRB-1 applies to amateurs who live in areas governed by deed restrictions, covenants, CC&Rs, or condominium regulations just as it does
to hams regulated solely by local zoning laws. In a Petition for Reconsideration, the League has formally asked the FCC to rethink its November dismissal of a 1996 ARRL Petition for Rule Making. That petition
called on the Commission to expand and clarify PRB-1.

In November, the FCC said PRB-1 excludes restrictive covenants in private
contracts as "outside the reach of our limited preemption," although it strongly encouraged associations of homeowners and private contracting parties to "follow the principle of reasonable accommodation" with respect
to Amateur Radio. But the FCC drew the line at proposing specific rule changes to bring private restrictive covenants under the umbrella of PRB-1.

In asking the FCC to rethink its November Order, the League said the FCC's
disclaimer "is no longer a valid premise" and no longer accurately reflects
FCC jurisdiction over private land use regulations. Since the advent of PRB-1 in 1985, the ARRL pointed out, the FCC has made it clear that it has

Congressional authority to prohibit restrictive covenants that could keep
property owners and even renters from installing antennas to receive TV,
satellite and similar signals. The League asserts the same principle applies
to Amateur Radio, in which the FCC has said it has a "strong federal interest."

The League called on the FCC to clarify that PRB-1 applies to private land
use regulations, leaving hams free to negotiate reasonable accommodation
provisions with local homeowners' associations just as they do now with
governmental land use regulators.

The League also asked the FCC to provide some relief from "prohibitive and
excessive fees" that localities might impose on amateurs for permits and
fees. The ARRL said that such costs can be "the functional equivalent of a
prohibition of amateur communications" and asked the FCC to state that
"excessive costs associated with land use approvals fail the 'reasonable
accommodation' and 'minimum practicable restriction' tests of PRB-1."

A copy of the ARRL's Petition for Reconsideration is available at
http://www.arrl.org/announce/regulatory/prb-1/prb1-recon.pdf

>I�m Rick Lindquist, N1RL.

The FCC is expected to respond sometime in the next few months. (ARRL)

ARRL: LEAGUE BUYS COMMUNICATIONS QUARTERLY MAGAZINE

The ARRL has bought Communications Quarterly magazine from CQ
Communications and will merge the publication with its technical
journal Q-E-X. The change becomes effective for subscribers starting
with the March/April issu
e of Q-E-X. The new combined publication initially will serve a joint
readership of more than 7000.

The League says that a subscription to the new, combined Q-E-X and Communications Quarterly magazine is priced at $34 but will be discounted to $22 for ARRL members. Please direct subscription questions to Circulation De
partment at league headquarters, 225 Main Street, Newington Connecticut 06111 or by e-mail to circulation@arrl.org. (ARRL)

**

PUBLIC SERVICE: HAMS NEEDED FOR LUNG ASSOCIATION RIDE

Mark Ewert, KB1ECH, tells Newsline that he is working with the American Lung Association to assist in recruiting ham radio communicators. This, for the charity's Big Ride Across America 2000.

Big Ride Across America 2000 is a thirty-five hundred mile bicycle ride from Seattle Washington to Washington, D. C.. It begins on June 19 th and is slated to arrive in the nations capital on August 5 th.

Mark says that in 1999, Radio Amateurs were used as communications personnel for the first time. He tells Newsline that ham radio communications proved to be very effective means of communications, particularly in the mo
re remote areas of the country. Because of this, Amateur Radio has again been asked to take part.

Mark says that hams interested in volunteering can either go the whole distance or work only a segment of the ride. For more information take your web browser to www.bigride.com. To volunteer or obtain more information
about volunteer responsibilities, please contact toll free at 1-877-B-I-G-R-I-D-E. In numbers thats 1-877-244-7433 (KB1ECH)

**

SPACE: MIR MAY HAVE HAM RADIO AGAIN

If cosmonauts do return to the Mir space station in March, hams wonder if they will put the ham radio station back on the air. While nobody really knows for certain, at least one Internet based rumor seems fairly certain
that ham radio will play a part in the mission.

The report says that right now all of the Amateur Radio experiments are currently disconnected but there is a tentative plan to have any new crew reactivate the Packet and S-S-T-V station. If they ever do come back on th
e air, any activity will be limited to FM Simplex on 145.985 MHz.

We must note that at airtime there is no independent confirmation of this report from any Russian government source. Also, putting the station back in service will require permission from the Russian Space Agency and lic
ensing of the crew by this nations department of Poste and Telecommunications. (AMSAT-BB)

**

VOLUNTEERISM: MORE FLY-IN VUCC CERTIFICATIONS

Pete Heins, N6ZE, says over the V-H-F Reflector that he will be available to perform VHF/UHF Century Club certification in Atlanta Georgia and Birmingham Alabama several times over the next few weeks. For those not aware
, Pete is a Boeing 767 captain who donates a lot of his free time during layovers to performing what can best be called fly-in VUCC certification

To save time, Pete does ask that all currently required forms from the Leagues website be downloaded and completely filled out before meeting with him. Also, you must be a current member of ARRL to even be eligible for t
he award.

If you want to take advantage of Pete's VUCC fly-in certification service please send e-mail to k1fjm@aol.com to arrange a time and date to meet. (N6ZE, VHF Reflector)

**

DX

Now with this weeks D-X report, here is Jeramy Boot, G4NJ H in Nottinham England:

YL operator Sarah will be active as KC4AAD from Antarctica for the next few weeks. QSL via K4MZU

Special events station 3Z8IMA is active on bands between 160 and 10 meters using CW, SSB, RTTY and AMTOR from Lublin Poland. He will be on though January 31st.

W4ZYV will be active as T34DA from East Kiribati until January 25th. QSL as directed on the air.

> .Jeramy Boot, G4NJH.

Thanks Jeramy. (G4NJH)

**

LAST BUT NOT LEAST: WEB ADDICTED OR HAM RADIO ADDICTED?

And finally this week, many hams have husbands or wives who complain bitterly that their spouses are addicted to the radio. Now they may have a new complaint. Web addiction!! Newsline's David Black, KB4KCH, has more:

The Los Angeles Times reports that a recent study of Internet surfers found that nearly 6% or about 11.4 million people are addicted to the Internet in some way or other.

Using a questionnaire posted on ABC News' Web site, researcher David Greenfield analyzed the responses of nearly 17,000 web surfers using criteria similar to that used to classify gambling addicts. Respondents who answer
ed 'yes' to five of the 10 questions were named addicts.

According to the study, marriages are being disrupted, kids are getting into trouble and people are spending too much money via the Internet. Which leads us to wonder what researcher Greenfield would find if he performed
a similar survey with radio addicted hams?

> From Birmingham Alabama, I'm David Black, KB4KCH, reporting for Newsline.

Guess we will never know the answer to that one. Will we? And maybe its better that way. (Newsline from published reports)

For some reason the radio bug is starting to bite again. What are the various bands like now? I mean in terms of DX action, what's hot and what's not?

I was last active in 1980 (contesting and DXing)and I imagine that the Internet has drained a lot of young talent away.

Anyone worked DXCC on Internet chat?

Just curious about what 80/40/20/15/10 are like (and aren't there some "new" bands like 30m??)

I feel like I've just thawed out of an ice block...

Mike WB9WFJ/M0AGP

Yeah know, I been waiting for a long time for someone to squish this guy. He thinks his Ford Dually and a 4 pill box is the best out here.

He used to live in Palo Alto, but he is a white guy that reminds me of someone that should have a Galaxy Saturn strapped on to his John Deere tractor.

Steve Michaelson was in this area a couple years ago and got a whole shitty thing stirred up up here. But fortunately that loser was only passing through.

Heh. Even your good buddy "Noggie" was up here for a while tripping off of all these shit starters up here.

I have a load of a time laughing at all the crap up here!

Be advised, It is a long trip up here. If you do decide to come up this way, Bring Mikey with ya...

Cya Later!

David, yours is one of the more interesting and enlightened comments on this news group. For a start I am English (or Brit call me what you like) I spent 5 months living and working in Colorado last October. Whilst there I had my own Radio chat show slot on American Freedom Network (KHNC out of Johnstown) I used to have a 2 hour show every Saturday. AFN is only a small network and as such I used to have to do my own research for my show, the long and the short of all this is that some of the stuff I learned and uncovered would make your hair fall out.

You DONOT live in a free country anymore, and neither do I in England. If you think I am some kind of nut then I am sorry ,but I have to tell you that some of the stuff I aired and some of the interviews I held with prominent and well informed people lead me into hot water so much so that the FEDS paid me more than one visit, I was about to be held on some jumped up charge about being anti American. Nothing could be further from reality, I love your country and the American people, I am very sad that they have let themselves be hood winked by nothing but a group of Communists (Bill Clinton and the Democrats) Anybody who belongs to the Council on Foreign Relations CFR, The Trilateral Commission, The Bildaberger Group, Who is a 33rd degree Mason, and a member of the illuminati (yes I am talking about your beloved President Mr Clinton the antichrist) has to be more than a little suspect. Just look at some of the Executive Orders he has signed, ask yourselves why he would he want to get into bed with the Chinese, who now control both ends of the Panama Canal. Ask your self what is the real function of FEMA (Federal Emergency Management Agency) and why there is over 160 EMPTY prison camps that will hold up to 5,000 people each dotted all around your country. Ask yourself why the IRS has decided to spend $ 100 million of your money arming themselves to the teeth. Mr Clinton does not give a rat's ass about America or the American people, he is a Globalist, he is a ONE WORLD GOVERNMENT man along with his partners in crime Tony Blair and all the other cronies around the World. Make no mistake when he leaves office his next move will be to the top job at the United Nations, if he gets it then it will really hit the FAN in a very big way and its goodnight America and the rest of the World you will have kissed your ass and sovereignty goodbye. By now you are all thinking that I am definitely a raving nutcase, all I can say is watch this space. By the way I left America before they the FEDS that is had the chance to put me in leg irons and lock me up in the Marion Prison.

3037. AOL and Doc: Freedom of Contract

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-23 00:00:00 UTC
From: AllAmericn@webtv.net
Message-ID: <4715-388AB7EB-5@storefull-244.iap.bryant.webtv.net>
Source record: 120646

Respected hams, has it occurred to anyone, freedom of contract is at stake here? No one, other than the parties themselves, has privity to that contract. Each party has the inviolate right to act as desired, or not to act. No explanation to any audience is required.

Moreover, for us third parties, acting so as to come between the parties in privity moves into interference with contractual relations, a civil cause of action. Speculating about it is an exercise in futility, because ordinarily reasons are multi-faceted. And unless we get full disclosures from the parties, we are merely conjecturing about meaningless minutiae.

In my view, taking it into personal attacks on the posters is further flawed. Another tempest in a teapot!

Dear Floyd QST

I would like to thank you for writing this article about how restructuring is a good thing. I have been a ham radio operator for about seven years and I was getting to the point of quiting the hobby because the lack of accessibility to gain privileges on the HF spectrum due to the code requirements. About six months ago I decided to give it one last shot when it comes to the 13 words per minute code. To my surprise I did achieve 13 words per minute and became a general amateur radio operator about two months ago.

When I heard about the restructuring of the licenses my first reaction was to be very mad. How dare does the FCC changed requirements after all my hard work. Then I started to think back to that seven years that I was frustrated about the code and how just about every month or two I was swaying back and forth on if I was going to sell my radios and settle for the Internet.

But then I realized that everything you said in your article was true. If we do not entice new members to join the ranks of amateur radio and build up our numbers we will surely be extinct in about 20 years. The older hams or as you said the old farts only have one selfish idea in mind. They believe that only they deserve to be up on the H. F. spectrum unless you pass all of their requirements. When you ask one of these older hams about the future of ham radio I generally get this reply back and I quote"why should I care I will probably be dead by then". With attitudes like these we are surely in trouble if we do not get fresh blood into our hobby.

There is one thing that the FCC needs to do. They now have recognize that Morse code is no longer a major requirement when advancing our licenses in his hobby because of that I also believe the FCC should shorten the spectrum of frequencies used for Morse code. For the amount of activity which is very little in the cw range it could be better utilized for voice and digital transmissions. The reason I say this is we should be giving "the new generation of ham radio operators" more spectrum to enjoy voice communications instead of just making the frequencies very crowded and impossible to use due to the ham radio population explosion that we will see after April 15th.

Well thats about it for me and once again I thank you for the truth that is written in your article.

Sincerely George

Boy, did you open a can of worms here. As a person that uses code a lot for fun and currently am around 30 WPM I still must agree with you. It is ludicrous to see all that spectrum going to WASTE. MUCH more is needed for voice AND for digital modes. With these modes CW is a and should be dead as a need. For many it is a fun skill but not a requirement. If people are mad, let them add a more relevant requirement.

I've heard that bogus argument made over and over by those of you who never wanted to bother learning code.

It falls flat on its face with the insinuation that lack of enough incentive to increase one's code proficiency is somehow mysteriously linked to one's ability to read about and learn more theory. Exactly how does the lack of a higher class ham ticket prevent anyone from learning more about "the more technical aspect of the hobby"?

I'm missing something.

I don't watch TV except the wx channel before I start work in the morning. I work outside so its kind of important.

> Get up a half-hr early

I'm already up at 4:30. You get up half an hour earlier.

> Stay in the office during lunch-break

I'm a field Tech. I eat in the truck on the way to the next site if I eat at all. I visit the office on Monday morning to see my e-mail and file my travel vouchers.

> Come up with some other excuse, iow.. ;)

Why are you liberals always trying to decide what someone else should do with THEIR time and THEIR life? I've got enough problems without you inventing more for me.

Now here are my demands of you.

1. Join the Republican Party. Actively support your local Republican candidates.

2. Get up half an hour early and telephone friends, neighbors, and talk shows and tell them about how the Republicans want to get government out of their pockets, homes, and lives.

3. Spend 30 minutes of your your lunch hour handing out Republican Party brochures and encouraging people to register and vote.

After you have done all three, you will be allowed to post on rra.policy using your real name and callsign.

I am truely sorry you ran into that problem. And this is not meant to
start a fued. If a person would just turn on a HF radio, and copy it
off the air then he would become used to the sound of "REAL SENDING".
This will prepare you for ANYTHING you can get at a VE session.

Just a bit of advice.

We are heading for a solar maximum. However all indications seem to
show it will not be all that spectacular. The SFI is running close and
slightly above 200 these days.

You will find ten meters opening during daylight in good style most
days. Fifteen and 20 being the more reliable, of course.

The WARC bands basically follow suit. The activity on the WARC bands
is not too high. Which leads to good qso's of the rag chew variety.

Forty has been excellent to Europe and the Pacific with just basic
dipole's and about 700 watts. CW of course.

Thirty meters is rather sparcly occupied. We need more action there.

75 is 75, not much of a change in the last 50 years.

Welcome back. If you can stand the smart alec's on the bands you will
have fun.

If you're interested in eBay, I'd suggest you "lurk" on their site until
you get a good feel for how the system works. As many have said,
you can get bargains, and you can end up paying a lot more than an
item is worth (either because you didn't know what its "market" price
really was, or because you got caught in a bidding frenzy, or because
you assumed that the item had the best of tender loving care and
you assumed wrong).
I just saw a piece of used ham gear sell for more than HRO charges
for the same item brand-new-with-warranty-and-free-shipping.
Because eBay has such a huge audience, items that are attractive
and in high demand are likely to sell, used, for nearly their new price.
You may get good prices if you're looking to buy items that aren't
presently popular. Even the timing plays a big role. I bought a used
Modem thru eBay in mint condition (I already received it and it is mint)
for $15 two months ago. Last week, I saw the identical item on eBay,
and it had been bid up to $75 and the bidding still had over a day to
go before that items' auction ended.

One thought that I haven't seen mentioned in this thread yet. Many items
say that "... buyer pay actual shipping costs ...". You should email the
seller and ask how they intend to ship and what the costs are likely to be.
If the seller intends to use some independent package mailing service,
the charges can be a lot higher than you would imagine.
The mother-in-law sends Christmas presents every year to one of her
sons on the other side of the country, and had been using a
local "agent" for a nationwide package delivery service. Two years
ago, she asked me to send the package for her, and I took it
directly to UPS. Shipping was $18 - she was shocked that it was
so low, as she usually spend $40-$50 to ship the package. So, I
called the "agent" that she usually used, gave them the weight, and
was told the cost for them to ship UPS was $45.

Only problem with that is that some dont have HF priviliges till they
pass the test, let alone the radio. I for one won't buy an HF rig
unless I have passed the test.

He didn't say anything about sending on HF, just copying off the air. No HF
privileges are required for that.

I owned radios capable of use on all the bands I was interested in (VHF, HF)
before I had the privilege of using those bands. It worked out.

Is there a mechanism to obtain such a letter from the FCC? or do they
even have such records? I've been licensed as a Tech since 1976 and
I certainly don't have any copies of my license from back then, nor
was there any indication of any need to keep such info prior to the
beginning of the no-code tech license... Somehow, I get the feeling
I'm screwed if I wish to upgrade...

At 5 wpm....if you can't pass it either way, you shouldn;t be taking the test. You should be able to pass a 5wpm.

The ARRL uses 13wpm character speed on the 5wpm.

Here in Allentown, PA, the City Council, recently voted down a
proposed ban on the use of cellphones while driving. Seems that
some folks realize that modern technology is here to stay and
offers benefits.

Clearly ...

The point is that, under the old Rules, the 20 wpm Morse test was a
significant DISincentive to many to even bother to learn the technical
material necessary to upgrade to Extra.

Under the new Rules, that DISincentive has been removed and I fully
expect that many, many more people will undertake to improve their
technical knowledge/skills in order to upgrade.

If you read the FCC's R&O (available under the "Articles" button at

http://www.nocode.org

you'll find that that (providing incentive/removing DISincentive to
improve one's technical knowledge/skills) was one of the FCC's
goals/justifications for elminiating high speed Morse testing.

Dear Mr.:

The Honourable John Manley has asked me to reply to your email of
December 17, 1999, concerning the operating privileges of a Canadian amateur

operator, Mr. Graham Dyer.

Industry Canada's publication entitled "Standards for the Operation
of Radio Stations in the Amateur Radio Service - (RIC 2)" sets out the
frequency bands within which Canadian amateurs may operate in accordance
with their qualifications. This document can be found on our Internet site
at :
http://strategis.ic.gc.ca/SSG/sf01372e.html#RadiocommunicationsInformationCi

rculars.

Following verification of our records, I would like to inform you
that the data found on the RAC web site regarding Mr. Graham Dyer is
accurate. Mr. Dyer has the following qualifications: Basic Qualification
with Morse Code (5 w.p.m.).

Therefore, in accordance with the above mentioned document, a
Canadian amateur operator is allowed to operate below 30MHz as specified in
Schedule 1 of RIC 2.

Thank you for bringing your concerns to our attention.

Yours truly,

Jan Skora
Director General
Radiocommunications
and Broadcasting
Regulatory Branch

c.c. Hubert Pambrun
Ottawa District Office

By checking the pamphlet indicated, RIC 2, you will see that VA3GJB has no
privileges whatsoever on the twenty meter band. Only a basic endorsement
with 5 and 12 wpm can operate on twenty meters. This ignorant canuck has
only the 5 wpm endorsement. I discovered this after researching his multiple
usenet forgeries made under the name of Dave Tolassi, made from his Interlog
account. much like the libelous post that started this thread. So why, you
ask is VA3GJB operating on twenty meters when he does not have the liscense
to do so? Why has he libeled others on Usenet with posts forged under David
Tolassi's name? Well there are some wheels rolling on the Tolassi forgeries,

that's for sure. And Industry Canada welcomes all evidence of operation on the twenty meter phone band by Graham Dyer, VA3GJB. All operation on this band in the past and present by this lid are, according to Industry Canada, illegal. So let's pull together and get this bootlegging QRM'ing buddy of WB2OTK's off the twenty meter band. Please send all evidence, written and recorded to http://strategis.ic.gc.ca/engdoc/main.html. Points of contact are John Manley,Director, Jan Skora,Communications, and Hubert Pambrun, Ottawa District.

George, while it's good that you passed 13 wpm (you sucker) your ideas
are those of a ham who has not been very active.

I agree that the code portions of >>some<<, BUT NOT ALL, HF bands can be
shrunk, however you must not have an antenna. To imply that CW use is
that low is just stupidity. Get ears, please.

There are far more CW QSOs at any given second than digital QSOs and
most people dont want to be bothered with lame modes like RTTY anymore.
God, if they can't get out of WWII and use PSK31, why should those ops
get any more room than the many more CW ops on the air ?

> ham radio population explosion that we will see
> after April 15th.

George, you have the dreamy ideas of a newcomer. The only explosion will
be in welfare hams upgrading. The will be hardly any new hams.

There is no one worth getting licensed, no one who would be an asset, on
the outside looking in, wishing to get into this overpriced, space
consuming hobby.

Wait a minute. KT4TrashRadio took down his tower? All he runs is a mobile rig? But then again he can foment as much ill will while on the road as at home. You say that Florida law grants a wife "halfies" which explains Boob's sudden change of operating M.O? I'll be expecting news about these situations from some very reliable sources.

The reason the average age of an Amateur Radio operator has risen as high as it has is because of the attitude of the Amateur Radio operators. Granted, not all share this attitude, but those that don't are the exception, rather than the rule. I for one have been trying to understand this attitude, but have failed. If there are any hams out there who would like to enlighten me, I will be more than happy to further my education. Thanks in advance, Bill.

In the USA there is an increasing pressure from some
sides to do exactly the same thing as is indicated
in the Japanesse situation. The local daily
newspaper recently ran an editiorial on the subject.

While the target is cell phone users, you can bet that
any ban will be far more inclusive than just cell phones
if it happens.

Cheers,
Bill K2UNK

Same here, I took my 13wpm test last April and failed because of the
way they do it. It's not true 13 like I practiced. I was copying GREAT
at home but once the test started within seconds I knew I was screwed.
I think it's BS the way it's done. So did the other 3 guys taking the
test. I should have passed the damn thing. I did pass the written.
There would of been at least 3 new generals that day if it was done
RIGHT. I busted my ass for 2 years to get there only to have that kind
of nonsense pulled. And it doesn't matter if they put a half hour
between characters, it was still coming out at 18wpm which is a LOT
different than 13.

I continue to practice but I'll be damned if I'll take it again.

What do you suppose it would cost if Japan had to import
enough coal and build coalfired powerplants to replace all
the nuclear powerplants? Many of them would be using
candlelight.

I don't hate CBers. I was a license CBer in the early 70's. I got my
first ham ticket in 1961 and general class in 62. I currently have an
extra clas ham ticket.
What I don't like about CBers is that fact that they think that they
are above the law. Death threats, profanity, and hate talk dominate
the CB channels. A person running legal power is a rare thing on the
CB bands where I live. If my children were little, I would not
hesitate letting them work the ham bands unsupervised.
But,like the Internet, I would not consider letting my children
work the cB channels unsupervised. That is why hams don't want
the CB set comming up to the ham bands.
Just a thought

3088. 3950.net: W9ART Defies Hollingsworth

Newsgroup: rec.radio.amateur.misc

Even after receiving a warning letter from Riley Hollingsworth stating that further rulebreaking will lead to revocation of his license, W9ART is completely unrepentant and continues his intentional interference activities.

The full story, including a downloadable .wav file of ART's renewed jamming, is now the lead article at:

http://www.3950.net

With all good wishes,

Kevin, WB4AIO.

Yes, but it doesn't have the Search plug-in, which is what allows you
to read the word indexes that implement full-text search in Acrobat.
The "find" function you do have can only scan (slowly) the open
document for text.

I don't ignore it; I take it in context, along with the input from a
lot of other consumers.

>One might conclude from the evidence that, for some reason,
>the ARRL would simply rather sell books than CDs.

One would be foolish to conclude that because the evidence doesn't
support that conclusion.

Sounds like fun. My thing was 10m DXing. I once had a 3 el beam up 20 ft and Australia was coming in (to Wisconsin) at about 10 over S9! We both reduced our power to see how low we could go, and our power meters both showed about 2 watts was plenty. Amazing stuff.

When is the next solar maximum supposed to be? I am in the UK right now (hence the M0AGP call)and not sure what bands are like from here.

I am an apartment dweller but might have some luck on 10m at the right moment...

This post is generally aimed at those who bitch too much....

Ham Radio was dumbed down (In your terms) before anyone out here got there ticket and now everyone wants to bitch... Only ones dumbing it down are those that complain and say it will be like CB or say that CB'ers are gonna invade the bands. Get real!!! You keep speaking garbage like that and it will eventually happen and you would have ruined ham radio for eveyone. Could you live with that?

The activity of the FCC restructure hasnt even hit the CB bands in my area yet. If it has, I dont hear it on mine...Only 2 other people I know on the CB band which are Hams as well know about it. A few other CB'ers I know that I talked to on the phone could care less about the ham bands. They like CB the way it is and dont even want to hear about ham radio. They still think The ARS Sucks.

Now, I am a no code Tech so you know. I, before the news, wasnt even interested in code. Now, I am practicing every day and night so I can get my 5 wpm and join those of you on the HF bands. If you dont want to talk to me there or on UHF/VHF, fine, so be it. Some one will talk to me or pound a paddle with me. You will not be missed one bit by me and alot of other users, Including Generals, Advanced, and Extra Class operators.

If you decide to have a temper tantrum like a child and want to sell your gear and leave ham radio for good, I got a few hundred bucks to blow on some used equipment.

We all know you won't sell it because of the news. You will put it away and then come back after a year or 2.

Only thing that this post shows is that: He was hanging on to ham
radio in a life threatening situation and just happened to have the
mic in hand. The rest of you are having a heart attack about ham radio
but are holding on to your keyboards. I guess that means we better
require a typing skill test for a ham license.

The real pity is, they could! Because it isn't THEIR ham radio any more. It has now evolved to something else other than what "they" had, so it can't be REAL ham radio! They don't care what happens now...

The great thing, that's fine and I hope we never, ever become as narrow sighted as them. Please, everyone who is a "young" ham, or even an "older" open-minded ham, please let's all remember these people when it's our turn to experience change! Let's remember this and conduct ourselves in a much more open minded way.

You don't have to think like me. You don't have to do anything for me. I just hope that as the future comes on for me and I have been a ham for a while, that I can be open-minded enough to accept change and certainly open-minded enough not to call people names and have opinions about them because they don't do something the way I did it. But, no, you don't have to do a thing for me...not at all. I consider you pretty narrow-sighted for your opinions, and I plan never to conduct myself like that, that's all.

Your posting and your time to think about these matters tells me you do care...

3103. Q on restructuring...

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-24 00:00:00 UTC
From: Ken Hansen <khansen@njcc.com>
Message-ID: <86i46iouu2@mars.njcc.com>
Source record: 120546

I have been otherwise occupied, but now I am curious
about the restructuring of the licenses: I have a no-code
Technician license, which, if I do nothing will remain
as a third-tier (lowest grade) license. My question is,
what will I need to do get a "second tier" license?
Is 5 wpm code all I need, or will I also need to pass
another written test?

My impression is that with minimal effort I can (in
effect) upgrade to previous General ticket abilities...

TIA,

Ken
khansen@njcc.com

Ten meters is famous for being the band to do it on with no signal..hi.
When it's open, its OPEN.

The maximum is projected for mid 2001 or 2002 depending on which source
you use. It is on the way up, so that is a good sign.

Hmmm...Make money for doing nothing???
According to law Hams are supposed to be non-profit operators. This means that they can not be paid for relaying messages...I think.

Fellow Hams don't let the WWW bribe you into forgetting that you are Hams.

Hams need MORE license classes so that they can continue their tradition of being good for nothing.

Go to www.arrl.org and look for "Amateur Restructuring" for the
full skinny.

As a no code technician you will need to pass 5wpm of Morse code and
pass the General written. This will be a 35 question test. (Element 3).

You're free to open a book, study, and learn to your heart's content
regardless of any code requirement. Haven't you ever read just for the
enjoyment of learning?

>The point is that, under the old Rules, the 20 wpm Morse test was a
>significant DISincentive to many to even bother to learn the technical
>material necessary to upgrade to Extra.

Again, if one had wanted to further his knowledge, he could have done so
on his own.

>Under the new Rules, that DISincentive has been removed and I fully
>expect that many, many more people will undertake to improve their
>technical knowledge/skills in order to upgrade.

The same books will be available after restructuring as were before.
If the drive to learn lacked before, that same drive will be lacking
after.

Don't confuse learning and memorization of the question pool.

> Kim W5TIT

And here lies the major difficulties:
(Please refer to:
http://www.arrl.org/field/regulations/news/part97/)

Prospective hams who are interested in "using"
Amateur frequencies as a cheaper alternative to some
other radio or communications service often never
get past 97.1a and feel this is a justification for what
they do. This is not only illegal as per 97.113.a.2,3
and 5, but is very damaging to Amateur radio as it
puts those communications in direct competition
with other communications services and thus makes
Amateur radio a problem for big and small local
business alike. It is also a doorway by which people
fraudulently or mistakenly obtain Amateur Radio
licenses and gear.

In fact, when one reads in context, all of the part
97.1, 97.113, 97.400 - 407, we find the intent of the
Amateur service rules is to provide a broadly trained
radio resource that may be utilized in an any
emergency or emergency service, when other means
are down, overloaded or were not available for
regular use; rather than to provide over-the-counter
radios and a pool of frequencies to be utilized by
persons trained for a specific agenda obviously not in
accordance with other provisions of 97.1.

Perhaps the truest test is in fact 97.113.a.5, which
specifically prohibits, "Communications, on a
regular basis, which could reasonably be furnished
alternatively through other radio services." This
means that the official in charge of your volunteer
Search and Rescue team has no business sending you
out to get ham licenses and to buy your own ham
radios, because he could just as easily get a public
safety frequency allocation (more appropriately,
common statewide S.R. frequencies) and have you
buy your own radios more appropriate for the task at
hand.

Where is the "Enforcer" when you need him? Take this morning for instance-please. I was having a "treadmill 2" contact on 14.313 with a gent in Florida and after coincluding, without as much as giving a listen to hear if I had signed off, in came the two bosom buddies, KT4TR and K2IVX to take over the frequency. It was a clear cut case of piracy and poor amateur practice but did I send an e-mail to K4ZDH? No way. And since I no longer use a tape recorder during QSOs, forget it. For one reason or another "Badblood" and "Tippecanoe Schaier" think they're immune from the same "laws of Riley" that govern us all. What lends to such arrogance? Beats me but I assure you that what goes around, comes around.
AF2Y
P.S. With the new FCC restructuring, can N0VFP become an Extra overnight? God, what a thought!

Hmmm... How is it that I never made any bitching and moaning
sounds when the "no code" tech license was made? I had to pass
5 WPM code back in '85 in order to get my novice and then
technician license. I wanted to get on VHF and UHF radios. I
had to be a technician in order to be there.

Then they created the technician class license WITH NO CODE that
granted new technicians all the priveledges I had (except for HF)
without having to study the code. Did I get angry and cry sour
grapes? Hell no. I welcomed a lot of good people into the hobby
who would never have gotten into it otherwise. Many that I
personally know went on to General and above after having obtained
their "no code" tech license.

So, by your own definition you are calling your wife a welfare ham.
Do you think she appreciates that? I'm sure she doesn't and trust
she will punish you appropriately. :-)

Message-ID: <86iffs$p66$1@news.ececs.uc.edu>
Source record: 120564
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.misc

(While it doesn't glow in the dark, I'm considering this HT a boatanchor since Azden's abandoned it in the US market...)

I have a nifty Azden AZ-21 2M HT that I like a lot...except I only have the one battery pack that came with the unit. It seems like _nooobody_ among the "usual suspects" in the battery repackaging market has a replacement battery pack for this unit, so I could keep a hot spare. Heck, even my Yaesu FT-208's FNB-2's are still being sold! But not the Azden.

Anyone have a lead on these? Or know what style case is compatible, so I can buy a case and stuff it myself with new nicads? TIA, Ted

I do have degrees.
Present your proof here also.

> 7. I proved you lied when you denied you were identified as a
> known Internet abuser by Joe Greco on his published lists of

Acually, that was your hero Bill What's-his-name near San Diego
that was identified as a known Internet abuser by Joe Greco.

> 8. I proved you lied when you claimed you weren't stealing
> Internet access and your employer terminated you for theft

The above never happened, present your proof!

> 9. I proved you lied you claimed you've never used fictitious
> or illegal Internet address.

I have NEVER used a fictitious or illegal Internet address, present your
proof!

> 10. I proved you lied when you claimed you were not the most
> prolific poster of off topic messages.

I am NOT the most prolific poster, present your proof!

> 11. I proved you lied when you said WD-40 was unsuitable for
> electronic use by posting another endorsement from Roy Lewallen,

I still stand by my original statement, Roy is incorrect. That certainly
is NOT a lie!!

> 12. I proved you lied about your place of employment when I
> posted your work telephone and related data. I also proved that
> *you* worked at that office and not your retired father.

Wrong again. Present your proof!

> 13. I proved you lied when you claimed that Bill Cheek had never
> been a member of Mensa.

I never said that he had "never" been a member of Mensa. I said
that he was "NOT" a member of Mensa. Once again you are wrong!!

> 14. It's been proved by others that you lied when you claimed
> to have never lost an ISP for your forged cancels.

Wrong, I have never lost an ISP or forged cancels. Present your proof

> 15. It's been proven by others that you lied when you denied
> using numerous fake identities on the Internet.

Wrong again, see number 9 above!

> 16. It's been proven by others that you lied when you denied
> you've never blown up a repeater system through your incompetence
> and total lack of technical expertise.

I have never blown up a repeater system, present your proof!

> 17. It's been proven by others that you lied when you denied
> trying to break into other computer systems using Back Orifice.

I have never done such a thing, present your proof!

> 18. It's been proven by others that you lied when you claimed
> you had "acquired MORE FCC licenses ... than could be counted
> on one hand!"

Wrong , again!!!
I have passsed more FCC license tests than can be counted on one hand.
I NEVER said it had more FCC licenses than cam be counted on one hand.
Please Richard, pay attention to what I say!

Richard, out of the first 18 accusations you have made EVERY ONE OF YOUR
STATEMENTS IS WRONG!!!!! I'm not going to bother anwering all the rest
because
they are ALL WRONG!! Present your verifiable proof or forget it & back
off!!!

> >2. a letter from the FCC stating you held a Technician class license before
> >the 1987 date

I disagree: #1 - yes. #2 - NO! The R&O doesn't say that anything other than the expired license is acceptable, AND when a friend of mine (N6GPP) wrote to get the pre-1987 proof letter, his request was DENIED (yet, the FCC did revise his existing license from "tech" to "tech plus" - so obviously, they did do the research). His request was handled in December 1999, a week before the R&O came out. The FCC staff knew that the R&O said "expired license" only.

Although the typical sources are saying that the information can be obtained, anything other than the pre-'87 issued license is worthless. (Had the FCC thought not, they would have said "pre-03/21/87 license OR EQUIVALENT" and/or would have issued a supplement to the R&O clarifying this).

> Is there a mechanism to obtain such a letter from the FCC? or do they

If you didn't keep your old license(s) (or lost them in anything other than "good faith" - casualty or theft), that's your problem. Old licenses are part of the "station records" one is supposed to keep.

By date of issue. Older extra's, at least for the next 10 years, may have a date of issue after 4/15/2000, but the processing code from ULS will say "RENEWAL" instead of "ISSUED". Whether or not the public databases, other than ULS will distinguish this is up to them.

[The private database I have will make this distinction (and for general too). It's still in test mode - because some club things are turning out strangely.]

In Israel - where I learned to drive a stick shift "the hard way", the country where they have the worst traffic accident record anywhere, and where stuffing one's face, smoking, and gabbing on the cellphone are national pastimes, it has been unlawful for many years for drivers to eat or drink anything while driving. It is sporadically enforced but it hasn't helped......

My son has become interested in obtaining his amateur license. However, he is very concerned that if he gets it after 15 April he will be frowned upon by "older and wiser" members of the Ham Community. I have explained to him that it isn't his fault that the requirements to get a license have changed, and that I think that the majority of Hams will judge him by his own actions, not by the date on his license. I do not have a license, as I have always been happy as a "listener". His interest sprouted from my SWL hobby, and he has spent many hours listening and learning. He also reads the newsgroups and any other info he can find that will make him understand the amateur radio hobby. I think he is on the right path to becoming a proud member of the community. Comments?

Tell him to get his license and don't worry about what the others say.

I had a Technician license for about 25 years and had lots of fun doing what I wanted to do. Finally decided to go to Extra about a year ago as I had a job that gave me plenty of time to study the code. The written was no problem as I have been involved in electronics for many years. Outside of making a few digital mode contacts I only get on 80 meters to talk to a couple of fellows about 100 miles away. Just don't see much use for the DC bands for what I enjoy doing.

I have probably been involved with more modes than lots of hams before I got my Extra Class. RTTY, weak signal work on 144 and 432, keeping a repeater on the air, and working the satellites. Just too much to do to upgrade for 25 years.

Contact your closest FCC office, their computer records seem to be reliable
only to about the very early 1980's for amateur licenses. If you have been
licensed CONTNOUSLY since 1976 then that should not be a problem for you.
If they have to search old databases before the early 1980's then the FCC
has
contracted that out to a private agency that charges $25 per hour & most
searches
take 45-90 mins. The cost will be billed to you.

AS usual - a demand is given for "proof" of a statement - and THEN
when one is provided, it gets "shined on" and ridiculed by those
asking for such proof - EXACTLY why *I* didn't bother replying to THAT
request - or any similar ones - it's a WASTE OF TIME AND EFFORT trying
to change a mind that's already made up... And it would have made NO
difference if *1*, or *100* similar examples had been provided!

Goodness, at this rate the supporters of code will be quoting the use of
such when GI's are in prison of an unfriendly country.

Code is nice to knoe, but in reality is dead in the mainstream. Has it's
place as a mode of communication only, not as a requirement of qualification
!

I have a rig in my petrol engine truck, when idling I get random static
burst (up to strength 7), when I rev this increases and stays at strength 7.
I have checked the antenna earth,coax,SWR, and have a filter on the power
lead which comes from the accessory key. I suspect the alternator, is there
a way I can check this without having to remove it?.
Thanks for any advice

Agreed.
Deliberately trying to avoid spam-filters is a pretty
low-life thing to do.

Of course, when we've got people on here who
take delight in the suffering and death of others,
and calls this murderous glee "comedy,"
spamming a newsgroup seems pretty tame
by comparison. And people with morals
have a right to put the Nazis back in their place.

I won't name this nasty little toad since
people know about this little monster already.

I didn't read it that close but I thought he was -on- CW at the time.
Seems strange that he would take the time to send CW with the PPT rather
than just talk in that case. He sent, "I think I'm having a heart attack"
and then there was silence.

But it would be even more inlightening to see how many other emergencies
were handled in that same short time period by modes OTHER than CW.

FREE High Speed Internet Access
Check out this FREE new service from Broadband Digital Group (BDG). Click on the link below and register now to get "FREE" unlimited high-speed (DSL) Internet access over your everyday phone line - which lets you talk and surf the net at the same time. The service is always on, which that means to you, no more waiting on busy signals and no more dropped connections. Surf the Internet at speeds over 50 times faster than conventional dial-up. All you have to do is download a new Internet Software Application called the FreeDSL Browser Assistant from Winfire. It works with your web browser to provide instant access to useful web sites and services directly from your desktop (it's small enough to fit in your windows start bar). Just click on the attached link to quickly download the program for free. Let me know what you think. Also, once you download and install the software, if you refer the BDG FreeDSL service to 10 other people, you will receive a "FREE" high-speed DSL modem.

GIVE MY EMAIL ADDRESS WHEN YOU SIGN UP Ligosa@aol.com

You might want to listen to the lower 25 kHz of those bands to hear
the 20 wpm Extras in action.

It seems that phone brings out the worst in many licensees; maybe those
operators which are NAL'd should lose their phone privileges.

If you are even a half-vast CW operator you can copy the
changes in the sound a keyed CW signal makes on an FM
circuit. If you can open the squelch copying the quieting
becomes a piece of cake.
On several occasions I had to do that to ID a interfering
CW signal harmonic-ing onto a public safety frequency
(surprising how little RF it takes). When I copied the ham's
callsign I could look him up in the callbook I kept handy
and get him on the phone. Quick and clean. Worked FB.
Later we got a couple of HT's on those frequencies, then I
had a BFO to use! .....Might as well make it easy on
oneself.

>BRINGS up an interesting question - when WERE the exams "difficult" -
>only when *I* took them...?

In _The_Book_Of_Wireless_, Frederick Collins, 1915 we see that the code speed was just 5 wpm. (Of course, back then, code was the only mode in use -- you HAD to learn it AT SPEED or else you didn't communicate with anyone.)

Here are the other requirements:

Recognize the official KEEP OUT signal and distress call.

Be knowledgable of the International Radio-telegraphic Convention in force and Sections 3, 4, 5, and 7 of the Act of Congress of August 13, 1912.

Take a seven-question written exam covering:

1. How to make a diagram of the transmitting and receiving apparatus
2. How the transmitting apparatus is made and how it works
3. How the receiving apparatus is made and how it works
4. The International regulations for wireless communications and the U.S. wireless laws and regulations.

That written exam was an essay-type test. As the goverment examiners were fond of saying back then, "What you fail to say, you don't know."

Contact ITS, International Transcription Service at 717-337-1433. Look to spend about $30.00 plus $10.00 extra if you want your letter certified by the FCC. They take credit cards. Friendly staff, but a little expensive. Fast service, in my mail box in about 10 calendar days.

I tried when I first got here to converse on some real ham stuff. It was quickly shot down, so I joined the fray...

I wouldn't know about 20m cw, because I am not licensed for 20m. Nor would it be likely that I would be on CW, because I don't appreciate the mode. But I am glad you do and appreciate that you do.

This message was posted anonymously:

The american people have bent over and asked for this.
The politicians have offered them quick fixes for their petty
problems- just turn over a basic freedom and we'll throw
you a bone. Americans would sell their mother's ass
on the street corner for pocket change to rent the latest video.
They are the most despicable scum on the planet,
because they were given FREEDOM and LIBERTY,
and they PISSED ALL OVER IT! They wipe their rotten
asses with the flag their fathers and forefathers
bleed and died to defend. I have more respect
for reeking maggots then Americans.
At least they don't lie and delude themselves about
the parasites they are.

Americans are sheep - herd animals.
Fit only for sheering and slaughter.
I say give them to the U.N. and the One Worlders.
A few generations under the yoke of the New Imperialists
of the one-world movement would do them good- see how
they like picking lettice and living in a tin shack after
their weath is "redistributed."
It would kill off the weaklings.

I hope God damns the sheeple of the United States to fiery Hell,
for he allowed them the most precious of things, LIBERTY,
and they shit all over it!

Ken,

To upgrade to General you will have to pass the 5 wpm code test
and take the new Element 3 written test (35 questions) after 4/15.

If you take the 5 wpm code and the current 3(b) before 4/15,
you can present the CSCEs and your current Tech license at
a VE session after 4/15 and upgrade that way, too. (The CSCEs
will be good for 365 days.)

If you take the time to write Industry Canada, like I have done, they will inform you that he has the basic with 5wpm. If you look at the pamphlet RIC2, you will see the hf privileges for a basic with 5 wpm code has phone on 75 at 200 watts, but no privileges whatsoever on twenty meters. This came to my attention after filing paperwork on his forgeries on Usenet from his Interlog account using the name Dave Tolassi. If he had not been libeling and insulting others with forged posts, this would have not come to light. Once again I enclose a copy of the e-mail from Jan Skora, on behalf of Minister Manley, the director. He is the Canadian equivalent of our FCC Chairman, Mr. William Kennard. And yes, this has been verified on the telephone with a conversation with Jan Skora and Mr Hubert Pambrun, Ontario Chief.

Dear:

The Honourable John Manley has asked me to reply to your email of December 17, 1999, concerning the operating privileges of a Canadian amateur operator, Mr. Graham Dyer.

Industry Canada's publication entitled "Standards for the Operation of Radio Stations in the Amateur Radio Service - (RIC 2)" sets out the frequency bands within which Canadian amateurs may operate in accordance with their qualifications. This document can be found on our Internet site at : http://strategis.ic.gc.ca/SSG/sf01372e.html#RadiocommunicationsInformationCi

rculars.

Following verification of our records, I would like to inform you that the data found on the RAC web site regarding Mr. Graham Dyer is accurate. Mr. Dyer has the following qualifications: Basic Qualification with Morse Code (5 w.p.m.).

Therefore, in accordance with the above mentioned document, a Canadian amateur operator is allowed to operate below 30MHz as specified in Schedule 1 of RIC 2.

Thank you for bringing your concerns to our attention.

Yours truly,

Jan Skora
Director General

Radiocommunications
and Broadcasting
Regulatory Branch

c.c. Hubert Pambrun
Ottawa District Office

Here are some copies of his header forgeries that Industry Canada is also investigating:

Right! My SWL and scanning reading and experience, combined with a degree in x-ray, made the tests a breeze! Any SWL knows a lot about HF and a scannist knows VHF/UHF. The ARRL's books and the many ham websites made the listening hobby much, much more enjoyable as I gained knowledge. And I am VERY sorry I waited over 20 years since first becoming interested. I missed 2 great solar maxima. Don't lose out on this one!

I have a (Magnavox) "Mid 50s" All-Wave, All Transistor Portable
Radio. Model AW-100. Covers 540 Kilocycles to 22.5 Megacycles
in 4 bands. Is in very good condition. Scale 1 to 10 it's a 9+. Runs
on a internal 9 Volt Battery or external 9 volt power supply. It is
12" wide x 5 1/4" deep x 7 1/2" tall. Has a 52" telescoping antenna.
Also have original owners manual. JPG on request.

$200.00 firm, plus shipping

Boy, all you clowns can do is lie like a rug. QRZ info is meaningless, the idiot savant dyer provided that info, which further proves the conspiracy to bootleg. The accurate data for the qrm'ing canuck is at the Radio Amateurs of Canada website, here is the link with the canucks call:

http://www.rac.ca/cgi-bin/cgiwrap/rac/callbook?QueryText=va3gjb&QueryType=call&perpage=25

Basic with 5 wpm. Then you go the infamous pamphlet RIC2 which is in adobe format at the Industry Canada website at:

http://strategis.ic.gc.ca/SSG/sf01372e.html#RadiocommunicationsInformationCi

Then click on RIC2,
Standards for the Operation of Radio Stations in the Amateur
Radio Service

This is a pamphlet in adobe format. It clearly spells out his operating privileges, which are once again, according to John Manley, Prime Minister of Industry Canada, and the Radio Amateurs of Canada, basic with 5 wpm. That is the truth, like it or not.

This guy's nuts. I move either nowhere or anywhere, at MY disgression. My Extra permits it which is more than Polly can say. Had Riley taken this guy out for 6 months, there would have never been a need for anyone to QSY off 14.313 and if you want to be honest to yourselves, you know I speak the truth. And these labels of "Goodfellas" and "Stumpjumpers" and all the rest of that nonsense is nothing but "Pollyanish" bullbleep. Good grief, W4FQF is just as big an instigator on the Internet as he is on ham radio. A Fisherville putz at best.

>73, Jeff KH6O

If my recollection is correct. Your description
is incorrect. The "story" claims the ham was
engaged in an actual CW QSO already when
the chest pains hit and the ham then asked for
help via the continuing CW contact.

The ham did not experiance chest pains and
then turn to his rig to send an emergency
CW call with the hope that someone would
happen to hear it and reply.

Cheers,
Bill K2UNK

Here in NJ, any such effort would require a state law
as municipalities can't make laws that deal with the
operation of motor vehicles. Even local speed limits
must gain a state approval to become local law for
a township road.

This sounds like it is a ford. Some one else was having a similar problem but the sound was constant at idle or high RPM. In the above case, Check the electric fuel pump. In your case it sounds like an ignition cause. When I had problems with a similar situation, I had to go aut and buy 8mm plug wires and a few other items. this helped, but not enough to keep me from smashing everything on the asphalt. The owner took the truck to the dealer at my request and found that the onboard computer was throwing harmonics near a frequency of 27mhz. The onboard computer was replaced as well as a new ignition module and the noise was gone. Your case maybe different, but this was the most expensive and the last thing to do if you need to do it.... especially if your vehicle is not under warranty. (These were both FORDs).
Im happy I own a Chevy.

I'm pretty low on the "Ham" pecking order (as one of those no code
tech geeks) but because he takes a test that has only half as many
questions on it as my test had, means nothing to me he will still
pass the FCC's requirements to recieve a license and that's what
makes him a ham, no matter what the "older and wiser" (pronounced
Old Farts) might say!

> I do not have a license, as I have
> always been happy as a "listener".

Now would be a great time for some of that father/son type stuff.
Studying and taking the test together would be something he would
be able to look back on (when older) and remember what a great guy
"Dad" was. Also then you would be one of those people that the SWL
group would be listening to.

> His interest sprouted from my SWL hobby,
> and he has spent many hours listening and learning.

Then both of you have a head start on the HF route.

> He also reads the

The more knowlage about the "ART" of radio the better!!

> I think he is on the right path to becoming a proud
> member of the community. Comments?

I agree!! I wish my daughters would take an interest in
amateur radio, but that's another story. :^)

Bottom line is he needs to do this NOW, and not wait
like I did. I got interested when I was very young,
and got licensed when I was 42 wasting at least 30 years
that I could have been enjoying my self!!

"73" and Good Luck on your amateur adventure!

There will be very little to frown on him from what I hear on the bands. Will he be going for his 5 words per minute? If not, He would be frowned upon as a no-code tech anywayz. I say, Encourage him and allow him to make his own decision but, ensure him that either license he gets he will have become a ham operator with the priviliges for that license. After about 6 months the bickering and complainig out here will settle down and your son will be the leader of so called "New Blood" that ham radio will need instead of the followers and whiners that currently exist. Wish your son good luck for me and I hope to hear him on the bands in the future. As long as I'm a ham, I will talk to and help the new hams since I will have reflected an image of a "Real Ham" that they will never forget.

When was the last time you heard those kind of things going on on the extra frequencies? Last I
checked, those were the general portion of the bands. Listen to the extra portion and you will
hear the true extras.

3208. O-scope repair

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-25 00:00:00 UTC
From: Chris Ross <pragmatist@kc.rr.com>
Message-ID: <388D6DF8.AB22305F@kc.rr.com>
Source record: 120698

I have a very nice Heathbuilt O-scope that has been giving me fits lately. I am the third owner of this thing, and its in near mint condition. The inside is very clean and all wireing seems to be in order

from what I can see. I get no output to the CRT at all, however. I have replaced all the vaccuum tubes in the thing and when the unit is turned on, they all light up just fine. I am beginning to suspect that I may very well have a bad CRT, which I am sure is very difficult to find. Any

suggestions before I go on the Quest for the Holy Grail in finding a very expensive and probably no longer manufactured part that I have no part numbers on?

Seems as if the demented fool from Clifton is having memory problems. AF2Y
has a new tactic now and he started last week by calling CQ when he hears
amateurs on the frequency that he does not like. This tactic started last
week and now everymorning he does the same old trick. The best way to treat

this idiot is to ignore him and possibly he will get the picture. He has been shunned by most all amateurs and can call cq for hhours , and there will be no reply to his calls. It is rather laughable.

He was a;so removed from AOL because of his attacks on individuals on the net. Too bad his wife was so upset about being thrown off the service. He should have thought about how his wife would have been deprived from her internet service if he had not stopped his foolish behavior. Iris, we know that it was not your fault. You obviously were not aware of the behavior of Charles.

I have alot of time and effort invested in ham radio Cecil. I love it as much now as I ever did. I'm just tired of all the pissing and moaning. Restructuring is a done deal..there isn't a damn thing me or anyone else can do about it. If I have an opinion
that "tit" doesn't like..I'm a bad guy...well piss on her and anyone like her. If she/they take that attitude to the HF bands they are digging their own graves. When the "narrow minded" "old farts" don't listen to their crap..it'll start a war on HF that'll make 14.313 and 3.950 look like preschool.

I am glad so far you have been getting good feedback.

I would not consider him any less than a ham at any time with any license. Remember amateur is closely related to a latin word the means for the love of it. It has noting to do with his expertise.

Unfortunately, as with all hobbies, there are bad apples and I or any one else can do any thing about them unless they don't follow rules and regulation or break the law.

Fortunately, you will fine 99.9% of the hams will more than welcome him and will assist in any way with one stipulation. He do the same for someone else.

There is lots of room for more new faces, many sub hobbies, vhf, microwave, digital, contesting, public service just to name a few.

Goon luck and best regards (73's)

From: BamBam <kl0an@my-deja.com>
Message-ID: <86kkjs$ju5$1@nnrp1.deja.com>
Source record: 120710

In early December I made contact with this individual Robert White (W1HF) of PeaceDale, RI and we arranged for the sale of his Hustler 2 meter antenna. I sent him a money order for the agreed upon price of $20 and when he recieved it he wrote back stating that the shipping was too much via UPS or whatever he was using. I replied and asked him to send it USPS Ground or cheapest way possible. He replied that he would and also that he sent it. After three weeks I sent him another e-mail asking about it and he said he sent it. That was the 28th of December and I still haven't recieved the package or anything from Robert White. I've e-mailed him a couple of times the past week and he doesn't even bother to respond.

Be aware of this guy. He sounded like a decent person in the e-mails back and forth but, now I'm out $20..

If you know this guy personally, make sure you tell him about this message, I'd welcome any response from him.

All my other deals thru this newsgroup have come out well, it's a shame that one individual has to ruin a perfect record.

And yes this will be cross-posted to a couple of other newsgroups because I feel it's important to warn other newsgroup users of dirty dealers. Sorry for the inconvenience.

Yo,

Whatever about the whole issue being over or not, the fact remains that
5 WPM code TAUGHT at 5 WPM speeds is actually HARDER to learn than
12-13 WPM code. There has already been much written on this matter by
the self styled code doctors and much of it is quite true.
I think that it is a sham that this has been allowed to happen when
anyone who knows anything about the psychology behind morse reception
knows that this is a well established fact. Just who made this
decision?? If they are going to use farnsworth type spacing for the
tests then this is fair enough but I don't think they will do that.
The insanity of the situation makes me cringe. The people learning it
will inevitably set their tutors or software to 5 wpm with proportional
spacing and so end up putting in much more effort than they have to.
THIS IS A FACT! They have made the code test harder instead of easier.
unnngggggh. The world's going mad.

Does the CRT filament light up? If not check the crt tube socket and
for continuity through the crt filiments. If the crt fil. circuit
looks good trace the wire down to the source of the voltage to find the
problem.

If the crt lights up then check for high voltage at the anode of the
crt. If there....turn all lights down in the room. Turn scope back on
and see if there is any light at all in the crt. If not, try cleaning
all the pots and switches. It may be a bad contact/connection.

If nothing here works, buy a new crt.

For the record...I do not speak for WB4AIO...i just wish to adress the
issues raised here.--N8WGM

WRONG!!!!!!!!!!
There have been many comments made in regard to the comments made......I myself
have gone against some of the language used. I have heard W1WCR, N2SAG, WB4AIO
say in the past that this is not acceptable.
You seem to be upset that someone says NIGGER or is a member of some
group....yet you do not speak out against illegal jamming, death threats, music
playing, slanders, etc. .

>> So Martin Luther King had moral lapses!
>> So what?! He was still a great man!

Palllllleeeeese? Martin Luther King a great Man? What world do you live in? A
great man who was caught plagerizing his doctoral thesis...and his support of
communist leaders and their support of him. The Russians took great glee in
MLK's activites knowing what havock they would wreak. Recent documents released
by the Russians support this.
Don't get me wrong....the blacks in this country did not have a great
chance to succeed in the past. But they went down the road to destruction for
themselves by relying on GOVERNMENT to solve their problems. And MLK was the
Key to government intrusion into their lives. If they would have done as other
minority groups have done..such as the Asian Americans and the Jewish people
and put an emphasis on eductation and self reliance instead of affirmitive
acations and they would be far better off today. And anyone who is supported
by the Communist party world is not a great man. The communists killed hundreds
of millions.....far more than Hitler ever dreamed of. And yet you do not come
out against Stalin or Mao or Pol Pot...alll I ever hear from you people is
Hitler and the Nazis. Hitler was bad---Stalin was worse...and Mao was the
biggest killer of all.......

>King David was an adulterer and a murderer yet God
>> reckoned him as a man after his own heart...

Yous seem to think you know what God thinks by making a comparison of King David and MLK....wellllllllll.....
Ok say you ar right. Then we can safely ASSUME that the devil, who was being used by God sent Hitler to destroy the Jewish people because of their hate of Christians.....read the Talmud.....

>> How about the Christian New Testament.
>> Paul was a murderer yet his work is considered
>> sacred.....

The thing about Paul was that he REPENTED of his actions to God....MLK was using prostitutes and drinking up to the very day he died. He did not Repent.

>> But yet, surely inspite of his moral failings and
>> prejudices, he was a hero. He withstood
>> the Nazi onslaught.....

And Churchill and FDR gave away Eastern Europe to the Evil Empire that is the Soviet Union. Millions died under Stalin after the war. Churchill was a hero to those who are mis-informed and do not undertstand history and why things happen.

>> you folks like Thomas Jefferson a whole bunch but he philandered with a
>> > > *black* woman. How do you like that?

That is nothing more than BS. Ther is no credible proof that Jefferson ever had an afair with a black slave.

If anyone cares to check on QRZ you will find that VA3GJB, Graham Dyer, is listed as AD. AD means advanced.

AD means he has passed all theory and 12 wpm of that class. Which by the way gives him full hf and power authorization on all HF bands available to Canadian amateurs. Which include 20 and 75 meter phone.

You may confirm this by going to the RAC Canada home page at:

www.rac.ca/

Or if you want Ill gladly forward my copy of the frequency authorizations if you send me an e-mail requesting same. At:

w4nti@arrl.net

>Eight years of Clinton, and we're looking at the lowest unemployment
>figures in modern times. Structurally, we've got an economy that's far
>stronger than anything "Reagonomics" ever created.
Please inform me.....
Name one policy that Clinton put into effect that Gave us this great economy.

> Real wages are going up for
>the first
>time since 1973. (Put another way, real wages were going down during the
>whole
>so-called boom of the 80's.)
By whose account....the Governents? Why then is the inflation rate tied to
such things as shoe laces and macaroni when in real terms the inflation rate is
more dependent on housing costs and fuel.....things the government disregards
when figuring thier numbers. Don't believe everything you read or hear.

>The Fed is worried that working people might be making too much money!

Now why in the world would the Fed be worried about someething like that? Why
would a bunch of non government banks be worried about people making too much
money? Remember the Federal reserve isn't Federal at all.

>Violent crime rates continue their gradual decline.

Thanks to concealed carry in many states.

>Welfare roles are shrinking.
Thanks to the insistance by the republicans to change welfare despite Clinton's
objection to welfare reform.

>Verdict on eight years of Clinton is obvious; he's effective.
>

Yes he's a very effective LIAR. Remeber--he's the only elected president to be
impeached and the only president to be judged to have lied to a court and held
in contempt of that court. And I've seem to remember a famous quote-----"I've
never had any improper relations with that woman, Ms. Lewinski...." And don't
forget the rape allegations.......which to this day have not been adressed.
>"bread-and-butter" issues in 1996 (and 2000),
>it's obvious why we elected Clinton. We like success.

Yes he is a very sucessful liar..philanderer....you have been decieved!
>The American public is not dumb at all.
>

No they are not .....they have been misinformed as you seem to have been.

I am not a Republican ...not a Democrat.....just a guy who loves America.......and the 2 party system in this country is killing it!

I give kudos where they're due, which is rarely in 21st century America.

The February QST is an improvement over the past several issues... it's nigh time they remade each issue into a combination of HF and VHF, not just 2 meter FM CB projects, product reviews, antennas, gripes, moanings, how-to's and the like.

I don't dislike VHF or UHF, I'm active on the weak signal and satellite ends of both. But I loathe the simple-simon nature of FM CBing, and pray I'll never see the deluge of dumb-dumb and FM articles I just witnessed for most of 1999 again.

Emulating Popular Communications CB section with a FM mobile or HT of the month review is a sure-fire way to lose members... why, there's going to be so many new hams on HF (cough cough), why would they want to go the FM direction anyway ?

Kim..you understand my frustration as well as you know my name (Tim). I didn't single you out for anything. You just seem to inject yourself with a flair that many people think deserves a response. Instead of going out of your way to bump heads with people (name calling)... keep it a bit lighter. I have no problem with you..just how quick you start the name calling when someone disagrees with you. If you don't want to have anyone disagree with you..then you better stick with talking to yourself in the mirror. So...how about that dx on 20m cw..??

In 1977 when I was most active you could do that with a tribander up 50
feet and a kilowatt.

Still the same sort of requirements?

I remember I used to fantasize about building a giant antenna farm with
32 elements on 20 meters up 250 feet, etc. Now that I could
potentially "afford" such a thing I somehow have altered my priorities
a bit...

Glad to hear the Internet hasn't killed off interest in Amateur Radio!

Hi
I recently got into ham radio. I am really enjoying it but my wife says all these people are dorks and geeks. She will not let me turn on the radio in front of my kids or other people. I dont know what to do . I am really enjoying this hobby. I realize in any hobby there are all walks of life. She says that these people us have nothing better to do with our lives. She and her girlfriends kid me constantly about getting me a hat with my call letters for my birthday and putting a magnetic sign on my car with my call letters. In short she is really getting me upset. Has anyone ever had similar experiences and how did u handle it
Many thanks
Robert

Hello-

My name is Kevin Wright, and I am a researcher at West Virginia University, and I am studying interpersonal communication in newsgroups on the Internet. Relatively little research has been done on newsgroups despite their growing popularity.

If you would be willing to take a few minutes to complete my on-line questionnaire, your input would be extremely helpful to my research. All responses are anonymous, but I would be willing to send you a summary of the survey results if you email me.

The link to the on-line questionnaire is:

http://www.as.wvu.edu/comm/surveyfrontpage.html

Thank you very much for your time.

It doesn't. The license is merely wallpaper, and is not
a measure of your technical talent.

My favorite "go-to-guy" when I was stumped with a technical
problem was W0VDI (SK last year) who still had the "Technician"
class license he first got back in 1958.

Yes he does have some good points..however....not all that many years
ago a dictator with a Napoleon complex, and a oriental with interest in
conquering the world, and a Italian with a superman complex, also
thought the same of America.

God help those that think America won't stand and fight when these
freedoms are attacked. This is what makes this country great. Our
diversity and in a time of "real crises" will rise and destroy those
foolish enough to attack us.

Remember.....we are the first and ONLY nation to use a nuclear weapon.

Dorks and Geeks? I have seen Female ham operators that look like playboy centerfolds... Got friends in a Harley-Davidson Club that use ham radio (I happen to Ride one)... Truckers use ham radio (I happen to drive one)... My friend owns a 4 wheel drive club that uses ham radio (only licensees). I also thought Hammers were geeks like computer users till I became one of them. Seen a few bikers at a local ride with ham radios and asked about them and was then interested. I then found out that Ham Radio operators are people also interested in another hobby other than just riding there bikes, playing on computers or posing in nudie magazines.

Ask her this, Does she talk on the telephone, listen to the stereo, watch TV? If she does, tell her you are gonna buy her a hat with the name of the phone company, TV Channel or Stereo frequency she uses and put a magnetic sign on her car or even slap a sign on her back.

Only things that there are better to do is Work, Pay the bills and raise a family or stick with your other prefered hobby.

Don't get upset about it, because you like it and that is what you want to do. Im sure she has certain things that she likes to do that you can use as a retaliation to her or even her friends. I also know that the radio wont fight with you, Refuse you any fun with it, You can turn it on at will and turn it off when you dont want to use it, It wont stick its cold pieces on your backside in bed, doesnt burp, fart, eat all your food, It works for you, You can trade it in for a better one or buy another and have 2 or 3 or 4 of them without the

other getting jealous.

I own 2 companies and my hobbies helped me create them.
First is My 2 way radio repair shop and then after that was established, I opened up a Pallet Recycling company that is just now in the start up phase and seems that it will prosper better than the radio shop.

CB was my first radio experience, soon after came ham radio, then came the repair shop that was suggested by a friend to help support our hobby, Other radio enthusiast, and private companies (Commercial, Public and Private).

Hopefully Ham Radio has enthused you enough to prosper in it and take advantage of what it offers you.....

&#$(*###AOLvia&$#@$$-----NNTP216.38.78.1

Graham could be the latest target of a type of
personality which consistently follows a fixed
pattern. We've seen many such types in this
NG and on the air.

Ham radio and the NGs provide a convenient
vent for particular personality types.

If it wasn't Graham, it would be someone
else. There will always be a target for this type
of personality's aggression, until such time as
this type of personality has the capacity to
be honest with itself, if ever.

This type of personality wallows in controversy
and always has, controversy being necessary to
fuel a state of hypomania.

Anyone following the antics in this NG should
research Type 2 & Type 3 Bipolar Mental
Disorder, especially the state of Hypomania.

In a very simple layman's analysis:

-A stressor, such as job loss or intense
scholastic requirements, triggers an alcohol
binge and/or drug usage.

-This in turn induces a state of Hypomania
in the Type 2 or 3 Bipolar personality.

-The inability to cope with life's daily problems,
coupled with extreme emotional immaturity,
and the state of Hypomania manifests itself
in repeating episodes of aggression toward
a person or thing which the personality
perceives as the source of their real
and imagined problems.

Example: My car won't start this morning.
It has to be Graham Dyer's fault because he
does not possess the prerequisite class of
Canadian amateur license to operate on 14313.

The above example, humorous as it is to the general population, is reality to the Type 2 & 3 Bipolar.

While the above is a simplistic explanation, one can begin to see the emerging and repeating pattern.

Unfortunately, the down side of Bipolar Disorder is Depressive. When the Hypomanic state crashes, as it always will, a state of severe depression evolves. For now, we'll confine our discussion to the Hypomanic state, as that is what is currently being displayed in this NG and on the air.

The Type 2 & 3 Bipolar's written expression in the Hypomanic state is characterized by lengthy rambling in poorly constructed sentences. Clich&#65533;s in these sentences can be humorous. "Put a hinge on it and flip it up your ass. Weak as well water. Lie like a rug."

Speech patterns, such as on ham radio, of the Type 2 & 3 Bipolar in Hypomania are very rapid, with several thoughts strung together in rambling sentences. This type personality rapidly shifts from subject to subject and back again to previous subjects, often finally ending with a thought irrelevant to all previous subjects.

Speech in the Hypomanic state is clipped. "Sherry dunnit," and "Dutmutmat," being a prime examples. (Translation: "She already did it." and "It doesn't matter much.")

Maybe this helps explain some of the behavior in the NG and on the air.

I'm Dr. Hugh Hightower, and you can meet me daily on the Florida State Traffic Net. Along with all my little low towers, I wish you the best of hamming and DX.

73,

Dr. Hugh Hightower
Florida Clinics, Serving the ham radio communities since 1968.

(If ham radio is stressing you out, please join Mrs. Hightower and me after the state traffic net for one of our VERY

soothing and relaxing on the air therapy sessions. This week's topic is, "How to keep your level of aggression down, while waiting for that rare DX QSL card.")

3261. Ht Stand ???

I used to have a wooden stand for my 2 meter HT back a few years ago, it has since come up missing. It was a just a simple square piece of wood with a angled slot in it and a piece of plexiglass that fit in the slot. The belt clip on the HT fit over the plexiglass and held it in place so you could use it like a min-mobile rig. Anyone know of anyplace that still sells such a contraption ?

Regards

Gary

I don't see that one has anything to do with the other. I would say that most if not all the people in favor of lower or removing the code requirements still believe that code is a very valuable mode. It is just a mode and it isn't for everyone. So why force people to learn the mode just so they can take the test. The only thing it proofs is that the person take the test can receive X WPM when they took the test. It doesn't prove they will be a better operator and/or person on the air.

At some point I want to learn high speed code, but that point isn't now. That doesn't make me any worst of a person. It just makes me a person that doesn't want to learn code right now, but does want to operate phone.

Ham isn't going to be a CB good buddy band and here is why:

1. There is already a NO CODE license. 6M and above doesn't have any CB types to speak of on it. Sure you point to a few but I have never swear word worst than hell or damn and that is very very rare.

2. CBs already have a band where there is plenty of cheap radios and no risk. They are not going to be willing to invest $1000+ bucks into HF gear.

3. The CB types will not be welcome on the ham bands unless they behave themselves. If they do what is the big deal?

>with a lust for learning studied and bettered themselves.
>Thanks for proving my point.

Right on Jeff. My ham license was the start
(after some preliminary tinkering with SWL)

of a career journey. Oddly enough, except for
4 years in the Navy, most all of my electronic
and technical involvement was not at all
involved with any radio related stuff. I got
an early dose of digital stuff because of encrypted
RTTY technology used by the Navy.
Post Navy went to Ma Bell, etc.

Except for the Navy, at no time did
anyone ever rely on my ham license as being THE
reason for anything I did or got relative to my
career. The Navy did make me an
ETN (Electronic Tech-Communications) vs an
ETR (radar type) because of the ham license. The
designation to becoming an ET, however, was
predicated on my having an associate degree
in electronics.

Cheers,
Bill K2UNK

> --Tim. you're wasting your time with the guy. My wife was more irate at being knocked
offline by AOL than by

anything else however she was aggravated by my not telling her I was
switching. For some reason the clown from Vero is taking credit for my
leaving AOL thanks to AOL and if it were so I would be hopping mad and
badmouthing it and so forth and so on. I reiterate that AOL is super but at
times very annoying and I speak SUBJECTIVELY. I am trying to persuade no one
to leave it or join it. And don't believe anything out of the processor of
K2IVX who is nothing but a pawn of TR's. He too is taking credit for
something that never happened. If anyone wants to believe that two crackpot
AOL stockholders can, by virtue of just the power of the buck, coerce someone
at AOL to terminate for good the account of a user, it's ridiculous.
Furthermore what kind of business would it really be if it allowed itself to
be thusly coerced? AF2Y a..k.a. goodbyeherbiesaysdoc

You mean like invest a grand or so into an illegal HF rig and
AMPLIFIER then call "CQ Skipland"" in the 10 meter CW section ??? Why
what CB'er would _ever_ do something like that when they have legal 5
watt rigs available ? ;-)

I've enjoyed amateur radio for over 20 years, there has always been the group that somehow feels the need to point out how much more they know than you. I hear it on HF and the local repeaters as well. As a teen ham I became discouraged on several occasions trying to fit in with the local crowd on the repeater in Akron, OH. If your not in with the in crowd then no one wanted to chat with you. In time I found there were plenty who shared the same interests as I did it just took a little more effort to seek them out.

My advise, get the license, enjoy the hobby. Get involved in different modes, build a kit or two, try some different antenna designs and enjoy radio. Chase DX, enter a QSO party or two and you'll meet plenty of interesting hams. Guys that are actually building things and experimenting and contesting are typically not so concerned with what class license you hold but rather what your doing with radio. Anyone who brings up issues of being a welfare ham or codeless hams being less of a ham than someone else are not worth debating with or talking to, they have personal problems which are far too deep to resolve on this newsgroup or anywhere else. Don't expect to fit into every group you hear on the air because you wont. Not unlike a pilots license, getting an amateur ticket is a license to learn, those who continue to learn and do more have lots of fun, the real learning and understanding of radio begins after you pass the test.

The newsgroups are probably not the best place to learn about radio, personal amateur web pages probably offer much more of what the ham community really is as opposed to the bickering old women found here.

What's even more retrarded is that is doesn't prevent archiving in many cases to begin with. News and mail servers are not always set up to respect the no archive command - they are not required to.

Some systems that do respect it will drop the message altogther - so some newsgroup readers will never see the message.

If you're afraid that something you say may come back to haunt you, then don't say it at all. x-no-archive is not very effective at cleaning up after you.

Wow. So that is why VA3GJB threw his liscense out the window?
Fascinating

Good advise and comments from all. Allow me, as one of the "old school Extra's" (whatever that means) to extend my hand of welcome to the soon to be new ham. There is so much to do in amateur radio that no matter what your license "class" you will find others that share your interest. Have fun and enjoy, thats the ticket.

3273. The theme song of r.r.a.*

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-26 00:00:00 UTC
From: Walter Gesundheit <w2dne@my-deja.com>
Message-ID: <86nlqf$sd3$1@nnrp1.deja.com>
Source record: 120364
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I am the very model of a Newsgroup personality.
I intersperse obscenity with tedious banality.
Addresses I have plenty of, both genuine and ghosted too,
On all the countless newsgroups that my drivel is cross posted to.
Your bandwidth I will fritter with my whining and my sniveling,
And you're the one who pays the bill, downloading all my driveling.
My enemies are numerous, and no-one would be blaming you
For cracking my head open after I've been rudely flaming you.

I hate to lose an argument (by now I should be used to it).
I wouldn't know a valid point if I was introduced to it.
My learning is extensive but consists of mindless trivia,
Designed to fan my ego, which is larger than Bolivia.

The comments that I vomit forth, disguised as jest and drollery,
Are really just an exercise in unremitting trollery.
I say I'm frank and forthright, but that's merely lies and vanity,
The gibberings of one who's at the limits of his sanity.
If only I could get a life, as many people tell me to;
If only Mom could find a circus freak show she could sell me to;
If I go off to Zanzibar to paint the local scenery;
If I lose all my fingers in a mishap with machinery.

If I survive to twenty, which is somewhat problematical;
If what I post was more mature, or slightly more grammatical;
If I could learn to spell a bit, and maybe even punctuate;
Would I still be the loathsome and objectionable punk you hate?

But while I have this tiresome urge to prance around and show my face,
It simply isn't safe for normal people here in cyberspace.
To stick me in Old Sparky and turn on the electricity
Would be a fitting punishment for my egocentricity.

> Roger J. Buffington
> W6VZV; w6vzv@arrl.net
> _____________________
Nonsense....
Long ago the "Editors and Engineers" {Bill Orr, W6SAI}
published "The Radio Handbook" which IMHO was better than the ARRL
Handbook in some respects. Its construction articles produced better
ham gear for example.
For many years AMECO Publishing, run by a NY Ham, named Martin
Schwartz, published ham license guides as well as code records and
tapes.
The FCC itself makes the exam Q & As available and the government
printing office Supt. of Docs publishes an Interference Handbook and
other pubs of interest to Hams.
Q&As will continue to be available for free via web-sites.
At the present time license guides and code tapes are available
from Fred Maia, W5YI and Gordon West, WB6NOA. They will soon be
available for the exams that will be applicable after April 15, 2000.
Looking through recent Ham mags you may find other commercial sources
of study guides as well.
When it comes to technical publications for the more advanced hams
nothing beats dedicated texts and IEEE standard manuals. There is a
wealth of antenna information availablefrom many sources, for example,
that can be very eye-opening to practical hams who want to do the right
thing for the right technical reasons. Digital technology pubs are
continously being produced by many publishers and must be a part of the
education of all Hams IMHO.
The ARRL is not the only kid on the block...nor has it ever been.
I don't believe that it should ever be. That is why I support the
continuation of as many differtent VECs as possible and the fact that
the VEC exam creation committee is not solely made up of ARRL people.
I do not intend to flame the ARRL here...but just to remind all
that most of the ARRL stuff is at the beginner level and much of it has
not advanced as much as it should to keep up with the digital

technology of today. It would be impossible for the present ARRL staff
to advance to the level that many members of TAPR now are at, for
example. The ARRL staff can no longer be technical leaders in modern
communications techniques and must rely more and more on professional
hams to lead them.
How can the ARRL be expected to lead Ham Radio into the millenium
and continue to promote its very BASIS and PURPOSE? That is: To
advance the state of the art and encourage the development of a cadre
of technical experts. My answer is that the ARRL can not be expected
to do so alone. The ARRL must IMHO let professional volunteers make
the kind of technical decisions that will shape the future of Ham Radio
and remember that they are basically a lobbying, publication company
and a social organization ...which can no longer be fit to shape the
future of Ham techniques or Ham technologies without outside help.

Hams need MORE license classes,
Bob Wex w2ilp (Intelligent Licensing Publications?)

According to Moore's Law, PC capabilities continue to
advance almost geometrically as a function of time.
Digital/Analog Cell phones have also been advancing at
a rapid pace. The development of lithium batteries is
said to be near its limit and long-life power sources
for portable equipmment are now considered a major
limiting factor....
BUT
Let us not limit the technical knowledge and ability
that Hams have. I believe that the curiosity and
innovation that hams have always had can continue
to permit them to understand the principles of
operation of all the equipment that they may be
able to use; maybe even "geometrically as a function
of time"....IMHO motivated Human brains are not as
limited as lithium cells may be....nor do all of them
fade with age.

Politicians build bridges when they aren't needed, in order to get kick
backs from bridge contractors. Some idiots help them by making rivers
out of pissing contests.

Your son obviously has a good understanding of Amateur Radio already.

He is correct in assuming he will be "frowned upon" by some amateurs ....older probably....wiser definately not!

There are always people who "frown upon" other people who are different or newer than themselves.

However, I believe your son will have the tenacity to ignore these individuals and seek out those who will embrace him and enjoy sharing their knowledge and experiences with others.

I look forward to meeting your son on the air....and why don't you take the tests with him? You might find it a common mode of communicating even when he reaches those years where NOTHING you say is getting through!

Good Luck!

>N8WGM

Poor TONduhhhhhhhhhhhhhhhhhhhh.

Since TONduhhhhh (n8wgm) was the one who so desperately wanted my picture for masturbation, it would seem that my outing the fairy Steve desperately turns to his usual lame Pee Wee Herman replies. Oh, sorry TonDuhh, I didn't mean to bring your idol into this.
TonDuhhhh's track record for marriages is rather poor, since his obvious perverse lifestyle actually disenchants the lonely, plain women (or are they like him, hermorphadites) in record time and they leave him. Usually, he can only get the obese, truck stop women to pay attention to his bubba like appearance.
Not to mention his greasy-hair, coke-bottled glassed, buck-toothed appearance. Somebody must've used an ice pick on his face.
He has as many divorces as those out in Hollywood. Not that any quality women look his way. What I mean is, what woman would actually want to live underground like he does, with a dirt floor? Not to mention that his property in Eastern Ohio is well-known as a toxic waste-dump site.

The Wife and I are moving into a new development that does not allow the erection of amateur antenna towers or any external antennas with the exception of DBS dishes. I have been told that there is a Federal Pre-emption , isued not too long ago, that deals with this subject.

I am asking that some of you that may know anything on this subject may let me know where I can get texts of the new ruling or send me other links to any related stuff.

thanking you in advance Mike KL7MR

Not quite as elegant, but awfully inexpensive AND funtional:

A pair of steel bookends from your local stationery store. Three bucks a pair.

"Re-form" the angle of the upright section, and each bookend will hold 2 HTs each (or 3 VX-1R HTs <g>) at the proper angle for viewing.

Black...steel grey...fake woodgrain...enough options to match any desktop!!!

> OH, damn....am I supposed to have a license to listen...?????

Exactly the point. The fact that you are not licensed for 20 meters is
irrelevant as to whether you would know what is happening there.
Evidently the truth is that you simply don't listen - not that you are
not licensed for 20 meters, as you stated.

Seems to me both KT4TR and his pet rat W4FQF are being arrogant to say the least. I was on my treadmill today and had an enjoyable QSO with a gent in Mississippi. The freq. was clear therefore I took advantage of it. And Bobby Boy, my account on AOL is still active but dormant and your letter or letters and/or phone calls, if that's what you're implying, had nothing to do with anything between AOL and me. Why you keep taking credit for something that never happened is beyond me. Are you on AOL by the way? If not, why no?. And furthermore I think MindSpring is excellent. Very satisfied indeed.

The proof is simple. Newsline claims that it needs about $1k/month to cover its expenses.

The east coast version, "This Week in Amateur Radio" only needs $100/month to cover its expenses.

So, what is Newsline really doing with it's $900 difference? Is all of that really being eaten up in expenses? If so, mismanagement. If not, who's pocket is it going into? It's that simple.

I think in the original statement I made, left in this post above, I said that I would not know about 20M *CW* because I am not licensed for 20M. I should have drawn a longer picture, clarified my position, and stated that I would not know about 20M *CW* because a) I am not licensed to have experienced 20M CW, b) I don't use CW at all so to understand it escapes me...

I also don't think I have ever referred to the entier 75M band, only the frequency of 3853. If I referred to the entire 75M band in relation to bad operators, it would have been unfair of me to characterize it as such...

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr7_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr7_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr7_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

You really do need to pay more attention to what you write, Kim. In another thread you went into great detail about how every ham conversation you hear is bigotted, etc., etc. and you cited 75 meter frequencies. I believe it was Hans who took exception to your comments. Remember?

I pasted this from a message I saved last year. I have not used this item nor am I connected in any way with it. Just passing the information along....

==========

Custom Designed Scanner Stands, will also work well with Yaesu FT-50. Black wood base with rubber feet o bottom to protect furniture, adjustable angle bracket uses belt clip to fasten radio. Turn your HT in to a base, don't have it fall off the table. $11.

VHF Hi- UHF J-Pole Antennas..... great for apartment dwellers or hotel use. Hang from a curtain road or tree limb. Also good for transmitting on the 2M & 70CM ham bands.... $18.

Shipping by Priority Mail: two Items $4, one item $3.

Oh, I think probably lots of folks should pay more attention. Perhaps
if I were in a forum where it was really critical, I'd be a little more
worried. I also have never really been one for nitpicking the English
language to death. I guess I could start communicating with one
liners...I'll try that for a while...

This is indeed strange. My flare up with AOL came about in mid December of '99 and had nothing to do with my postings on rec. radio since I was utilizing my First Amendment Rights. There was never any libel involved since that word was never used by either the FCC or AOL. Somehow you have pipedreams believing that any complaint you may have registered, along with Lenny Schaier, could have influenced AOL against me. Don't you understand that if what you are saying was true then AOL could be held liable for their actions if indeed they had taken place. Why should a major company be beholden to an invasive big mouths like you and Schaier.You and Schaier are wannabes, nothing more. Can you substantiate your claims of power? If you wrote or called about me, to whom did you speak? Was anything promised? Of course not because it's a lie and you know it and everyone on this board does also. All you're trying to do is to take your "stupid super sleuth" atitude on ham radio and move it here to impress the world. In the meantime what you're doing is making AOL look bad by trying to make everyone think you "bought" them. Get off your high horse Bob and wise up. Everyone is on to you.
Doc,AF2Y

3311. AF2Y describes the scenario

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-26 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <86oa7dttk1@nntp9.atl.mindspring.net>
Source record: 120452

for example....uh....Dear Mr. Case.
Chairman of the Board
AOL.......
uh.......we are Robert Youngblood and Leonard Schaier...uh....the former is a fruit picker with AOL stock and also a skip tracer or...uh..sumpin else in law enforcement and the latter is the CEO of a company in Long Island but he can't spell too "good" so I'm spelling good for bothus.
Ah...uh...there's this ham named Doc with the call AF2Y who writes some badass stuff on rec.radio and even though it's the truth it's so badass that me and Lenny are going to divest ourselves of millions of bucks of AOL if you don't kick him off. Our problem is that he's too good wit words and it drives us nuts so you better get rid of him fast or thanks to us you're gonna go belly up.
Yours truly,
Bothus

And this ladies and gentlemen of this esteemed board is how the two geniuses supposedly got me expelled from AOL. Can you believe the chutzpah of them? Chutzpah is Swedish for "nerve." For heaven's sake people-tell them to get a life or get real and stop pretending to be something they're not-powerful.

3313. Restructuring Ham Radio As We Know

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-26 00:00:00 UTC
From: Mark E Hill <remington@bctonline.com>
Message-ID: <XiOj4.837$tJ2.18932@sea-read.news.verio.net>
Source record: 120454

Greetings Fellow Ham's,

I was shocked to see how the fcc changed the rules! I am a no-code tech and feel deeply for all of you who worked so hard at obtaining your ticket into the wonderful world of Ham Radio. I feel sorry for you veterans who have had to do things the hard way such as learning 13 - 20 wpm telegraphy. I feel as an operator that you need to earn your priveleges to more power the old fashioned way. I still plan on taking the full on 13 -wpm code exam to earn my General class license. I have learned a lot from you seasoned guys and feel that I too should work hard to gain upper class priveleges. I got out of cb radio's because of the people who make and break rules illegaly in the 11 meter band. Now it seems in my opinion that the government is trying to take away decency in radio and trying to move in on us to take away our priveleges to gain for themselves. I'm sorry that this has happened but there's only so much I can do or at least have power to do. Like I mentioned earlier I will still accomplish the 13- wpm code test and pass the written exam to get my General ticket the honest way by working for it. I feel in a mighty way that my right to earn my upgrades have been violated. Some how I get this horrible feeling that Amateur radio is going to be attacked by childish people in the upcoming months as this new thing comes into power in April. Anyhow 73's to everyone and sorry to hear the awful news.

Mark H.

I wonder why little Eddie W2KP, Complains so much about Captain Truth operating without benefit of call letters. He never seemed to have a problem, talking with Frankie Todd, who bootlegged my call (WB2OTK)for over a year. He also, never had a problem talking with Kurt (now Graham)when he was part of there group. Another question comes to mind, I wonder why both he and Jim Laraway (FCC Com Center DC)use to put out hits on Taylors, SC implying I was jamming on 75m, when we had moved 3 months prior to Powdersville, SC. After finding the new address of Easley, SC his bogus hits continued, poor Ed, never did figure out, that we do not live in Easley, although that is our postal address. It took quite a period of time to install the 220v line, remember the cathedral ceiling jokes?

Apply to the VEC or the VEs who conducted your session.
They have to keep copies for 3 years.

It is amazing what people will do to get attention, and then complain
when they get it.

Morse can be used on any frequency on any band. It doesn't displace
any other mode on HF.

> For the amount of activity which is
>very little in the cw range it could be better utilized for voice and
>digital transmissions.

George, good buddy, you need to install an outdoor antenna. On any
evening, I can count as many (if not more) CW QSOs as phone QSOs.

Morse already shares its spectrum with the phone and digital modes. You're
proposal is senseless.

>gone up more than 4.5 times what they were in 1969, have yours ?
>

No answer to my question- so I'll ask again.....-Name one policy that Clinton proposed and put into effect that gave us this great economy.....

>>>Violent crime rates continue their gradual decline.
>>

>>Thanks to concealed carry in many states.
>

>Does NYC have concealed carry ?
>
>

No it does not------but NYC has Rudolph Julianie..a republican who had to clean up after Dinkins------and Clinton suported Dinkins for re-election. If Dinkins was re-elected---NYC would have a heck of a lot more crime than it does. See the states that have concealed carry----Texas, Florida, etc.....the murder rates, the robery rates and all other types of crimes have dropped in the states that made it lawful to cary a gun.

>>>Welfare roles are shrinking.
>>Thanks to the insistance by the republicans to change welfare despite
>Clinton's
>> objection to welfare reform.
>
>By "caring Republicans" no doubt , they're the ones that don't want
>locks placed on dumpsters.

"Republicans" insisted on reforming welfare. Clinton resisted at first..but had to join in due to public opinion polls that showed that the vast majority of americans wanted changes made to stop this welfare socialism that bread even more poverty. As far as locks on dumpsters.....well I'm sure that you would not like people living in your dumpster if you were a business. I must say that your attempt to troll is a little weak at this point.

>>Yes he's a very effective LIAR. Remeber--he's the only elected president to
>be
>>impeached and the only president to be judged to have lied to a court and

>been reported he spent a lot of time in the 'bathroom' reading all the
>lurid details of the affair (I wonder ???? what he possibly could
>have been doing ????? ;-)

Whats with you people? Calling anyone who disagrees with you a nazi. I don't recall Ken Starr ever procaliming his support of national socialism (AKA NAZISIM). And where is your source that proves that Ken Starr sat in a bathroom reading all the lurid details. Seems you are making up stories to support your hypothesis that Bill Clinton is so wonderfull.

>) . I only hope someday you or your wife
>get a little NAZI prosecutor like Ken Starr to investigate your sex
>lives. If it weren't for the courts NAZI Ken would have subverted the
>attorney-client privelege.

What? Ken Starr was never at Nueremburg. He's not old enough to be a Nazi prosecutor.
I've never needed to be investigated by the judicial branch of the Federal government---Bill Clinton cannot say that! And as far as attourney client priveledge--what's that got to do with the price of tea in China. The courts have ruled in Starrs favor in every instance and several prosecutions of Clinton friends have resulted.

>Oh yeah, decades later someone appears out of the bushes to make
>wild-eyed claims ... Ever hear of Clarence Thomas ??

Yes I have. And the evidence against Thomas is non existent. As far as the rape allegations...well there are several witnesses to the fact that Juanita Broderick was raped.....and it was indeed by Clinton. Even the ever so cautious Limbaugh made mention of the Broderick case. The only thing protecting Clinton from some very serious jail time is he's the president..at least for now!

>I'll take ole Bill warts and all.
>

Typical in the box democrat. I seem to remember a quote by a famous dictator..something about useful idiots. I did not mean that as a put down. It's just that when people accept others as their leaders.....they must insist on integrity...something the Clinton administration has no idea of what that is.

>>I am not a Republican ...not a Democrat.....just a guy who loves
>>America.......and the 2 party system in this country is killing it!
>>N8WGM
>
>So write Jesse (The Body) Ventura in as your candidate , complete with
>feather boa.

You can have Jesse. I'll take senator Smith or how about a Buchanon/Alan Keyes ticket. Just the thing to wake up America before its too late.
Have a great day!

>your attempt to troll is a little weak at this point.

As far as trolling how about the BILLIONS in Corporate Welfare in the
form of tax breaks, loopholes and subsidies that Big Bidness gets. But
that doesn't count right ? because those are "special interests."

>
>>>Yes he's a very effective LIAR. Remeber--he's the only elected president to

>Whats with you people? Calling anyone who disagrees with you a nazi.

I get nervous when an out of control NAZI prosector digs into ones
personal PRIVATE sex life and issues subpoenas to BOOKSTORES. Sig Heil
Herr Reichsmarshall Starr. The right wing Republican Gun nuts can
blather on all day long about intrusive big gumm't but then they turn
their backs when a NAZI prosecutor delves into ones private, personal
sex life.

> I don't
>recall Ken Starr ever procaliming his support of national socialism (AKA
>NAZISIM). And where is your source that proves that Ken Starr sat in a

You wouldn't know the truth if it bit you on the ass, you two-faced
moron.
You're justifing this recent episode to a supposed forgery via a
canadian isp. Now, how can you be sure which of that isp's users sent
them? I'd say you'd use any old excuse to go back to your previous
behavior, mr. "I've killed once, and by god, I might just kill again."
Here's a suggestion: you let Graham operate his station the way he
wants to, and you operate yours the way you want to, and let the two
respective communications authorities sort it out. Your vigilante
mentality, if such a thing is possible with you reeks of the CB band.

My OH My did I rattle a few cages. For a start it's no good you all
getting so upset just because you have been found out obviously you
are all in it together. You are just the kind of people your
Government love, lambs to the slaughter, give them any old BS and they
will believe it why because they are just too stupid to figure it out
for themselves whats really going on. Make no mistake when it bites
You in the ass and it will it will be too late to start crying, just
Remember us nutcases told you so. Your beloved president Bill is A ONE
WORLD GOVERNMENT MAN he dose not give a dam about you-your Wives or
Children or more importantly America. For him and his cronies to
succeed they first of all have to get rid of the middle classes, next
The Christians, they have succeeded in virtually wiping out the middle
Classes, but they have got NO chance of doing it to a true Christian,
Why because we are on the winning team. It is quite obvious that none
Of you ever read your Bible, if you did you would understand that the
Book of Revelation is unfolding right before your very eyes. I am only
trying to bring a message to people like you who really don't want to
listen as it upsets their cosy little World, well enjoy it while it
last's you have not much time left, and don't complain when they tattoo
a
mark on your forehead otherwise they will cart you of to one of the
empty 160 prison camps they have reserved. The last thing I want to say
to you poor misguided individuals is that we know who you are but we
will pray for you.

Hello Mark...Get ready for flames, flames, flames. I think you have a great attitude. But there are some people who will resent your hard work ethic..they are waiting to be given all that you have and will work hard for. Don't feel sorry for the veterans.. feel sorry for all those that will flame you on this one..they don't have a clue.

Be glad to see you on the bands.

Tim,
He hasnt been given anything yet.
Since he is a No-Code tech (In Theory, Since he didn't post with a
call) with only close to 3 months left, we will see how it turns out
after April 17th or later when some one checks his call sign on
qrz.com... Hard work ethics are always respected, However, Him being a
No-Code at present doesn't bring me to believe he will pass the 13wpm
before the last day. Also, How do you and the rest of these morons
think it is just given to others? I asked this question before and all
you guys seem to ignore it or work around it. Only closed minded
people get flamed. They don't have a clue? Do you care to give one
away? I got plenty of clues, In fact clue #1. Your angry because now,
all that paddleing you did got you to the same place as a 5wpm
amateur. Big Deal!!! You still have your little segments to use your
abilities and I will look up to those with 13wpm or higher as long as
they dont act like you! You might want to change your attitude about
all this because soon the No-Code Techs', 5wpm Generals and Extras'
will out number you. after a few years or more, the likes of the old
crew will slowly die off and you might be left alone with all of us.
How would you feel if we treated you like you do us? Be an adult about
it, Be a Respected Ham and allow others to look up to you for your
accomplishments at the time you took your 13wpm and after that.
I respect Marks' and Your Opinion, But get real, Nothing is being
handed out. I am somewhat dissapointed in the change, but i'm not out
here complaining about it. I just take it with a grain of salt and let
it go.

Good Luck Mark with your 13wpm.

Thanks for the early morning laugh...lets see..you call me a moron, closed minded, angry, and say I need to change my attitude. But yet you respect my opinion..?? The last thing that will ever happen is that I will change my thinking because of such an intelligent post as yours. Also, the very last thing I worry about is as you say I "might be left alone with all of us". I spend most of the time I operate on the cw bands. That is one place I have no doubt we will never meet. (thank God)

Please notice how I can make a point without the name calling. Try it sometime, I might start to respect your opinions also.

Too much 14313/3901 bullshit on this NG lately....

Here's a funny diversion: (enjoy - ya've earned it!)

"ED ZACHARY DISEASE"

A woman was very distraught at the fact that she
had not had a date or any sex in quite some time. She was
afraid she >>>might have something wrong with her, so she decided to employ
the medical expertise of a sex therapist.

Her doctor recommended that she go see Dr. Chang, the
well known Chinese sex therapist. So she went to see him.

Upon entering the examination room, Dr. Chang said."OK take off
all you crose." The woman did as she was told. "Now get down and
craw reery reery fass to odder side of room." Again the woman did as
she was told.

Dr. Chang then said, "OK now craw reery reery fast
back to me." So she did.

Dr. Chang slowly shook his head and said, "Your
probrem vewy bad, you haf Ed Zachary Disease, worse case I ever
see, dat why you not haf sex or dates."

Confused, the woman asked, "Oh my God, Dr. Chang,
what is Ed Zachary disease?"

Dr. Chang looked the woman in the eyes and replied,
" Your face rook Ed Zachary rike your ass."

Get a clue, Charles. Your "First Amendment Rights" do not apply to ISPs and online services. Read AOL's Terms of Service. They reserve the right to remove you or to delete messages which, in their opinion, are improper.

You'd have about as much success as an attorney as you did as a dentist.

From: Brad Sheppard <bradjenn@nf.sympatico.ca>
Message-ID: <3890709c.0@209.128.1.3>
Source record: 120296

Hi I just acquired an old Kenwood TM221A mobile radio and am wondering how to chage the step rate of the VFO. It is currently set at 20KHz and I have a load of repeaters in this area that require a 10 KHz step rate (i.e. 146.790 as opposed to either 146.780 or 146.800 which are the only two frequencies even close to the desired one available)

Thanks in advance
Brad Sheppard

Here's your chance to contribute to the new question pools as they are assembled by the QPC.

A mailing list has been established as a public point for submitting questions for consideration. This is a private effort, not a function of the NCVEC, and is intended as a clearinghouse for public input into the Amateur Radio license examination question pool. Questions gathered there will be forwarded to the QPC (Question Pool Committee).

To subscribe to the list, and to obtain further instructions, send an empty email message to:

Ham-Test-subscribe@egroups.com

Instructions will be sent to you by return mail.

Are you saying that the big guns operating in the DX window are cb
types? Usual amateur tradition referes to 75 meters as the phone band,
and 80 as the cw/digital band.

3382. TS680S dim display - help please !

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-27 00:00:00 UTC
From: g0lfp@invalid.hotmail.com
Message-ID: <memo.20000127213202.20151B@g0lfp.cix.co.uk>
Source record: 120314

apologies to anyone who has seen this in another radio newsgroup, heres hoping for more info here.

My display has gone very dim on my TS680S, anyone had this happen to them and know how to cure it? I assume that there is a high voltage driver for the tube gone pop, but without a cct diagram, I'm a bit loathed to start prodding around aimlessly !!!

regards - Steve

My first instinct was to be insulted, but then I realized that I, too, share the view you just expressed, although I would have expressed it differently.

I don't think that ARRL ever has, or at least ever should have been, the sole source of Good Technical Things in Amateur Radio. Modern radio technology is simply too vast and has far too many disciplines for anyone to expect that any individual, or group of small individuals, would possess the talent and skills to be able to do it all. If the technical problems facing Amateur Radio today were small enough that they could be handled by four hams in the ARRL Lab, they would have been solved years ago.

The League has recognized this for decades. The ARRL Field Organization has created a Technical Coordinator position, with assitant Technical Specialists, to address technical issues at the section level. From a national point of view, notice how much QST and QEX material is prepared by non-HQ hams. The League draws heavily on outside experts when it creates its publications; the various chapters in the Handbook, RFI Book and many others have been written by people selected for their expertise, their ability to put that expertise into words and their willingness to do so. The League has a list of about 100 technical

advisors, with expertise ranging from medical to digital to RF to antenna design to lightning protection, again, able top-notch professionals that the League could NOT afford to hire but who are willing to donate some of their time to help Amateur Radio. The same principle applies to many ARRL Board-level committees. The RF Safety Committee is comprised of what I believe to be some "world-class" experts in the EMF field. The RFI Task Group is about to expand its membership significantly, adding members from the leadership of several disciplines and areas (Part 15 manufacturers, the cable industry, etc.) When I was tasked to do the RFI Book and RF Exposure and You the very first thing I did was to draw on our existing experts and shake the bushes for more. This is exactly what my boss told me to do; it is really a "normal" and appropriate way to do things, IMHO.

Now, having said that, I will add the the Technical staff of ARRL are no slouches. In the antenna field, the experts would agree that Dean Straw, N6BV, the Antenna Book editor is "one of them." In the RFI field, there are people who know more than HQ staff about individual aspects of RFI, but HQ staff have, IMHO, made contributions to the state of the art in the field solutions to RFI problems. Even in the area of RF exposure, the work that ARRL has done has been valuable. One of the FCC OET staff, upon getting his copy of RF Exposure and You, said that the information it provided went well beyond what the FCC had prepared. Zack Lau has been a consistent presence in QEX, often adding his own design work to its value.

This is all a planned part of what ARRL is and does; it is NOT the collection of 100-odd HQ staff; it is NOT the ARRL Board of Directors; it is NOT just the Field Organization or the National Traffic System or the DXCC program, of even just the members. It is a process, one that, to the extent that people are able and willing to participate, can draw on the best of our best for the good of Amateur Radio. QST and QEX and other publications are one of the ways that such knowledge that is out there is documented and shared with Amateur Radio. That is why I have often suggested to people here that they write those QST and QEX articles. Every bit of this process adds its own value and every bit of it is important. So if you say that ARRL HQ staff cannot make all of the contributions that need to be made for Amateur Radio, I will agree heartily. ARRL has provided one means for making the contributions that ARE being made readily accessible to other hams. If you say that ARRL staff cannot make any contributions to Amateur Radio, I will heartily disagree; I have offered but a few examples from my own work. If you say that ARRL is a publications house and social organization, you are neglecting or not seeing much of what the League is doing.

Although there is always room for improvement, I think that what we have right now is working pretty well. Any suggestions for ways to make it better?

73,
Ed Hare, W1RFI

: Anyone know anything about this radio ? Motorola MCS2000
:

It is the handheld version of the series of 800 Mhz trunked radios.
The unit is about $1650 each for Model II (alphanumeric display
and keypad). Model I is cheaper (about $900) with less features.
Very flexable radio for trunking.

The MCP2000 is the mobile unit.

Got one to sell?

BTW, this is becoming the standard radio for police and public
safety.

In a previous article, Jim Kelley <jwkelley@uci.edu> writes:

>I think the membership requirements are unreasonable, Hans, as it
>unfairly discriminates against AO's who are new hams.

This is a very selective organization, Jim. They only want
members who have proven (by long example) that they are
dedicated and committed anti-technoids. They certainly
don't want some disruptive person to show up at a meeting
wielding a hot soldering iron, or embarrassing them with
with a logic diagram or schematic!

What's an MCP2000? European version?

I have two MCS2000 Model I Smartzone 900Mhz and they are VERY similar to the
MTS2000 portable that I have. The MCS2000 is a MOBILE.
My company has five of them and we were one of the first places to get them.
Serials are less than 200. They were major buggy and had to be 'upgraded'
several times by Motorola before getting them fixed. They are VERY good
now.
Nice radio all around, but I like the Spectra series better. Too bad
Motorola orphaned that line.

Not necessarily, Hans. A reflector list like that will allow hams to propose questions that they are unsure of, have the benefit of a group discussion and, from that, minor errors that are creeping into the questions now may be minimized. Committee processes can be cumbersome, and sometimes produce unusual results, but as we learn in the editorial business, more eyes mean fewer typos.

The important thing is that the QPC receive more input from hams, by whatever process.

You're one of those that are referred to as "the CB type" I bet. Of course, I wince at terms like that, because I know some really decent folks who are also CB enthusiasts (should I tell you how to pronounce that word?)

Anyway, folks, this isn't a "CB type," if that is what you have meant. This is, simply, a non-plus human type. And, now you will see what happens when we "shun" such types...

Apparently misguided ignorant Polly thinks that the yokels Bobby and Lenny have incanny abilities to persuade a major company to can employees or terminate subscribers' accounts ad nauseum. Here's my challenge. I dare either KT4TR or K2IVX to prove that my account with AOL was terminated or that they had anything to do with alleged termination. Go ahead, make my day.

Mr Cracker...freedom of speech advocate or malcontent substance abuser?
Did Mr Cracker get HIS license with a waiver? Cracker should be re-tested asap since he has a hearing problem...namely that his head is so firmly wedged in his rectal cavity that there is NO WAY he could have passed a CW test using the standard testing method. Perhaps he learned CW by having his XYL pound out the code on the top of his thick skull with a cast iron frying pan. That would explain why he is not yet housebroken and suffers from delusion tremors.
A quote from mr cracker, "Wait! What is that climbing up my wall? Lizards? Snails? Oh, never mind. It is only one of my resident cockroaches."

From: rileygotchu@my-deja.com
Message-ID: <86o2v8$6mc$1@nnrp1.deja.com>
Source record: 120462

From what I have heard, AOL told AF2Y that the law suit inviting posts that he was putting on news groups was reason enough to pull the switch on his antics. It was reported that two very influential stockholders complained about his "Libel Act" to the powers that be at AOL.

Good work boys. Iris is punishing him with whips as she is mad about the floor falling out from under her weird "HUBBY".(but he likes that)!!

Say all you like Charles about your so-called absence from AOL. The reason that you are not on that service is that you were removed because of your rude and repugnant postings. Your wife was even irate over the incident and you are such a "JACKASS", that you have deprived Iris from a service that she really liked. You were warned about your slander and offensive behavior, too bad you did not take precautions. First you were warned from the FEDERAL COMMUNICATIONS COMMISSION and now you see where your actions have landed you.

As a stockholder of AOL I must compliment AOL for taking action against people who abuse the service.

"Hammer". why is AF2Y blowing smoke about his bums rush from AOL, I heard that two very prominant stockholders got tired of his antics and complained to the CEO, Why is Crazy Doc stone walling the truth? Why don't he come clean? I heard Iris tried to log on her favorite ISP ,AOL, and found out that the "Problem Child" of the Swartzbard Clan had screwed up again. No AOL for Iris anymore so sad, soon, No Mindspring either. And No more AOL for the "A" hole, AF2Y.

Slander is a verbal defamation. Libel is a written defamation. The
newsgroup usually posts WRITTEN material, DUMBASS.

>bad you did not take precautions. First you were warned from the
FEDERAL
>COMMUNICATIONS COMMISSION and now you see where your actions have
landed you.

Sort of like YOUR warning, huh Youngblood? You're the only one I know
that received a warning letter from the FCC and a write-up in QST for
reading credit reports, police reports, etc. over the air in some sort
of petty revenge scheme.

>As a stockholder of AOL I must compliment AOL for taking action against

What a "Kiss Ass"! You better go get that 13wpm soon or you will be in the same boat as us other No-Coders. Since when does code make radio decent? Code is a Mode, Not an attitude you reflect in utter stupidity. I speak english and have no license for it, are you saying that if it spoke it faster that I would get and upgrade from nothing to nothing? I will always support Morse as a mode and the 5wpm testing, However the 13wpm and 20 wpm can fly off of a cliff since I will upgrade and pass the elements I need to operate where I want too. There was a post in this group and someone used a Truck Driver as an example for how he was tested and different test for different endorsements, I will only say one thing about that and that is: Why does the DMV only allow the use of one trailer when you take the driven test? I have Double/Triple endorsements which is like having 20wpm but I only had to take a written exam for and didnt have to take the dolly and second trailer to prove it.

We as hams maybe threatened by Corporations wanting our bands, But I will always Protect the bands that we rightfully use. You won't find me hiding in a corner while other hams are trying to battle off these pest.

I respect those who respect me and since alot of these other punks that like to cry and whine about me being a No-Code Tech and that I got my Ticket handed to me and say that im now getting my code handed to me can kiss my big ass, because I still have to work for it and study.

I use to look up to the Generals, Advanced and Extra class operators, because they are the ones who would set the example for those with the entry level licensee. However, After hearing the squabble out there on the bands, which isn't as bad as in here, Has got me to the point that other entry level licensees look up to me, because Im in the same boat but I have only been out to sea longer. Say what you will, I have heard the crap on HF (Jamming, Foul Language and Threats) and tend to stay on VHF/UHF but will soon be down there to be an example of a real Ham Operator and not one of the Generals or higher that constantly abuse the very band they they protect. What a bunch of hipocrits. I only respect those of you who have worked your tails off to get where you are and continue to set an example for others also to mention those of you who have protected the band for the right reason.

>any related stuff.

"Federal preemption" probably just doesn't apply to your case - because Washington "preempted" the right of cities or states to ban antennas.
Your situation is a matter of contract - a contract that you voluntarily signed - to abide by these deed restrictions. As such, you probably have no recourse - unless your state law provides otherwise. Courts are reluctant to mess with deed restrictions that buyers themselves signed onto.
If it's a 2M antenna you want, try hiding it in the attic; it will probably work just as well, based on my experience. Or there are concealed VHF/UHF antennas that go over a plumbing vent and look like just a taller vent to the untrained - your neighbor or homeowner's association isn't likely to notice.
That's the advice of this attorney.

The W8MMQ Wire

Welcome to the W8MMQ Wire for January 28, 2000! This newsletter is distributed each week, and is available free to all radio amateurs. If you would like to subscribe to the W8MMQ Wire, send your name and email address to w8mmq@email.com. Thanks!

This newsletter is available online at http://w8mmq.net/. Also, be sure to visit web site for a large archive of radio modification files. The archive is updated every few months, and currently has over 2,000 files.

In this issue: The ARRL elects a new president; the South Caroline exam audits continue; and more!

NEW ARRL PRESIDENT ELECTED
W8MMQ - The ARRL Board of Directors has elected Jim Haynie, W5JBP, to the position of president. Haynie was elected during the Board's meeting in Memphis on January 21.

Haynie is 56 years old, and has been an amateur radio operator for 27 years. He says that during his presidency, he will focus on the future of the amateur radio service.

In other business, the Board discussed the implications of the new changes to amateur radio, which will go into effect on April 15. They also discussed enhancing the League's presence on the internet. Details of the meeting will be listed in an upcoming issue of QST magazine.

SOUTH CAROLINA EXAM AUDIT CONTINUES
ARRL - An FCC investigation continues into possible irregularities in some South Carolina exam sessions last summer. On January 13, the Commission wrote Volunteer Examiner William J. Browning, AB4BB (ex-AF4PJ), of Pendleton, South Carolina. The letter was part of a continuing audit of a July 14, 1999, W5YI-VEC Amateur Radio examination session in Clemson. Browning was listed as the manager of the session.

The FCC said the Manifest of Applicants Browning submitted was signed by Eugene D. Watring, AF4DB, and Maurice D. "Dale" Martin, KT4NY. Watring and Martin have told the FCC that they were not at the session and did not sign the manifest. Seven FCC Forms 610 Browning submitted also bore Watring's and Martin's signatures, but both have told the FCC they did not sign them.

In its letter to Browning, the FCC enclosed copies of the Manifest and Forms 610 and asked him to explain the apparent discrepancies "in detail" within

20 days.

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth also said the FCC was aware of allegations that Browning had "physically threatened one or more of the Volunteer Examiners" listed on the July 14 session documents. Hollingsworth warned Browning that if the allegations are true, the information would be turned over to law enforcement authorities.

The FCC also wrote Watring on January 13 regarding a second July 14 VE session in Clemson that Watring managed. The FCC said the Manifest of Applicants Watring submitted was signed by Grady P. Robinson, AK4N, and Mikel T. Blackwell, N4OPD. The FCC said Robinson's and Blackwell's signatures also appear on four Forms 610 Watring submitted. Robinson has told the FCC he was not at the session and didn't sign any documents relating to it. The FCC had not yet heard from Blackwell.

The FCC enclosed copies of the Manifest and Forms 610s and asked Watring to explain the apparent discrepancies "in detail" within 20 days. The W5YI-VEC has been cooperating with the FCC in its investigation in South Carolina.

From the ARRL Letter, January 21, 2000

A NEW LPFM SERVICE IS APPROVED
W8MMQ - On January 20, the FCC voted on a new, noncommerical low power FM radio service (called LPFM). Many throughout the microbroadcasting community are looking at this as a victory, and a step closer to opening the airwaves for everyone to use.

The new service will be broken into two categories. There will be a higher power category, with power ranging from 50 to 100 watts and a service radius of about 3.5 miles. The lower power category will range from 1 to 10 watts and have a service radius of about 1 to 2 miles.

The LPFM stations will be issued an 8 year, renewable license, along with a 4 letter callsign, with an "LP" suffix. These new stations will be required to broadcast a minimum of 36 hours per week in order to maintain their license.

Visit the FCC's Mass Media Bureau web site at
http://www.fcc.gov/mmb/prd/lpfm/ for complete information on this new radio service.

THE WEEKLY DX REPORT
VA3DX will be active as 8P9DX from Barbados until the 6th of February. He is using all bands with CW, SSB and RTTY, and will be participating in this weekend's CQ WW 160 metre contest. This counts as NA-021 towards the RSGB Islands on the Air award. QSL is via VE3ICR or VA3DX.

PA0LPE is expected to sign 8Q7PA from the Maldives until the 3rd of February. This counts as AS-013 for IOTA. QSL is via PA0LPE.

There is just time to look out for DU1/DL4OCM who is active from the Philippines until the 1st of February. He is on 160 to 10 metres using CW RTTY and SSB. This counts as OC-042 for IOTA.

After his Anguilla operation, W5SJ will be active as P4/W5SJ from Aruba, which counts as SA-036 for IOTA, and as J3/W5SJ from Grenada, which counts as NA-024, between the 2nd and the 10th of February.

SM0CCM will be active as J73CCM from Dominica until the 13th of February. He will be using 6m and 160 metres. This counts as NA-101 for IOTA. QSL is via SM0CCM.

Look out for P29DX from Papua New Guinea. The call was originally used by Steve, G4JVG, between 1991 and 1994, and has been re-issued to Elmer Ribeyro. QSL is direct to Elmer or to his QSL manager EA4CEN, direct or via the bureau.

Finally, Roger, G3SXW, and Nigel, G3TXF, will be active on CW only as S79SXW and S79TXF from the Seychelles this week. QSL is to their home calls.

From RSGB News and 425 DX News

UPCOMING CONTESTS AND EVENTS
Visit the ARRL Contest Calendar at http://www.arrl.org/contests/ for more contest information.

The CQ World Wide 160-Meter DX Contest, CW portion, sponsored by CQ Magazine will run from 2200-Z January 28 until 1600-Z January 30 (phone portion will run from 2200-Z February 25 until 1600-Z February 27). Check out http://www.cq-amateur-radio.com/160rules99.html for more information.

The YL International QSO Party, CW portion, sponsored by YL International SSBers Inc., will run from 0000-Z January 29 to 2359-Z January 30 (SSB 0000-Z February 26 to 2359-Z February 27). Use general CW bands only.

If you know of an upcoming amateur radio contest or event, send it to w8mmq@email.com, and we will include it in this section. Be sure to send it at least a week in advance. Thanks!

AND ... IN CLOSING
Thanks for reading this edition of the W8MMQ Wire! This newsletter is produced and distributed each week by Dan, W8MMQ, and is available free to all radio amateurs.

Information from the following sources was used in the production of this newsletter: the ARRL Letter, RSGB News, eHam.Net, and other published reports.

An online edition of the newsletter is available at http://w8mmq.net/. All content on the W8MMQ.COM and W8MMQ.NET web sites is Copyright (C) 2000 by Daniel Hicks, Jr.

Well written, Gotcha. But my point wasn't to justify this guy's distasteful behavior. My point was rather, why must we characterize him as a "jerk," when we can accurately describe his conduct without attacking him with this opinion maquerading as fact.

Bob Sherin, W4ASX
Miami, Florida

Roger is a 45 year old gay man living with his mother in small shack in a small town just outside Wheeling west Virginia.
Roger, who is unemployed, is studying to be an electronics expert.
Funny---45 years old and he hasn't figured out what he wants to do with his pathetic life except insult people. Gee Rog---45 and you are back at school using government money to re-educate yourself because you chose a path that lead no-where. . And you're just a General class operator? Some electronics expert. Can't pass the advanced or extra class tests......What a loser....45--unemployed....gay.living at home with mommy...back at school....a wannabee Kung foo fool.....and was caught jamming 14.313 by none other than Riley Hollingsworth himself. Can you say LOOOOSER!!!!!!!!!!
Roger drives a pathetically small chevy pickup truck---an S-10 that is just big enough to handle this obese freak.
As Roger so aptly points out---his fantasies are to have men think of him while masturbating......a very sick wacked out sub human terd this Roger is.
He wants to get into the Guinness world book of records for the most postings by a retarded mongoloid and is well on his way to set that record. Rogers only claim to fame is that he thinks he's a bad ass and wants the world to know it.
Funny thing is, he's a coward---hides behind his curtains and his mommies dress. Typical of a bully who is nothing more than an unemployed smart ass.....LOOOSER!!!!!!!!
Here's a summary of rogers life---------
He was Born Roger L. Wiseman---in September of 1955 into a family that was not the best. Rogers Father left them when he was around 6 years old......something about Roger being a silly little fudgepacking geek who will amount to nothing...his dad was right.
Rogers mom was a kind soul.........always looking out for old Roger......you see Roger was an odd child. His head was deformed from having stuck into places it should not have been stuck. Roger always came home smelling like a toilet. Flies were always in Rogers hair......something was not right with this child and rogers mom knew it. Rogers nick name as a child was "GERBIL".
As a teen...Roger was always asking people....."Hey--do you think of me when you masturbate?" Roger was hit repeatedly when asking this question and Roger vowed to be able to defend himself if ever attacked again.....He continually kept muttering .."Those damn HOMOPHOBES." So he took up Karate. His Karate teacher nicknamed him Gerbil.
In his high school years, Roger was involved in the school band.....he was into the wind instruments...........and this helped him later in life.
Roger made many freinds with his abilities to play certain wind instruments........all the while thinking----"hey will this guy remember me when he mastrubates? "
Roger thought allot about masturbating and he loves the idea to this day.

So there you have it...HO HO! Roger Wiseman---the man who thinks men are after him.

I can flame with the best------and Roger---you loser------can't.

Functional illiterate and underground living bucktoothed choad
N8WGM wrote in message <20000127011158.26290.00000416@ng-ch1.aol.com>...
>Roger is a 45 year old gay man living with his mother in small shack
in a small
>town just outside Wheeling west Virginia.

Prove I am gay. Fact: YOU were the one who so desperately had to have a
picture of me that you drove out of your way to try and get one.
What straight man would do THAT? I think TONDuhhhhh, that YOU are the
closet queen here.
Fact 2: My mother lives with me, not the other way around.
And by the way, DUMBASS, it's "West Virginia," of course, an ill-
educated inbred whose appearance is like the albino boy
in "Deliverence" named Stevie wouldn't know the difference, anyway.
I'll be 45 in September, stupid..use your toes next time if you can't
count any better than that.

> Roger, who is unemployed, is studying to be an electronics expert.
>Funny---45 years old and he hasn't figured out what he wants to do
>with his pathetic life except insult people.

Poor baby..I've already received a BA, but all TONDuhhh has is a GED.

Gee Rog---45 and you are back at school
>using government money to re-educate yourself because you chose a
>path that lead no-where. .
And you're just a General class operator? Some electronics
>expert. Can't pass the advanced or extra class tests......

I could pass those tests like I did the previous ones I've taken..with
EASE. Not like the several failed attempts of N8WGM.

>What a loser....45--unemployed....gay.living at home with
>mommy...back at school....

Sentance fragments...but you can't do any better with your lack of
education can you?

>wannabee Kung foo fool.....

12 years of training..wanna find out?

>and was caught jamming 14.313 by none other than
>Riley Hollingsworth himself. Can you say LOOOOSER!!!!!!!!!!

Riley didn't catch me at all.. or are you now admitting you LIED about
your child molesting 'uncle" from Wheeling who supposedly drove by here?

> Roger drives a pathetically small chevy pickup truck---an S-10
that is >just big enough to handle this obese freak.

No, you DUMBASS, I drive a TOYOTA pickup truck. You're too ignorant to
know the difference. Better get those coke bottle bottoms you wear for
glasses checked.
I'm obese? Bwhahahahahahahahahahahahahahahahahahaha!
Now you're just guessing.

> As Roger so aptly points out---his fantasies are to have men
think of him
>while masturbating......a very sick wacked out sub human terd this

"Turd," something you're vary familiar with, since it's your main
dietary supplement.

Roger is.
>He wants to get into the Guinness world book of records for the most
postings
>by a retarded mongoloid and is well on his way to set that record.
Rogers only
>claim to fame is that he thinks he's a bad ass and wants the world to
know it.
>Funny thing is, he's a coward---hides behind his curtains and his
mommies
>dress. Typical of a bully who is nothing more than an unemployed smart
>ass.....LOOOSER!!!!!!!!

Poor baby. My neighbor said you drooled on your shirt when you were
talking to him.

> Here's a summary of rogers life---------
>He was Born Roger L. Wiseman---in September of 1955 into a family that
was not
>the best. Rogers Father left them when he was around 6 years

Hmmmm, then why was Dad still around the house up until he died in
1990?

old......something
>about Roger being a silly little fudgepacking geek who will amount to
>nothing...his dad was right.

Now, TONDUHHH, you shouldn't drag you childhood into this. We know your
father sodomized you on a regular basis. Of course, you begged him for
it.

> Rogers mom was a kind soul.........always looking out for old
Roger......you
>see Roger was an odd child. His head was deformed from having stuck
into places

question and
>Roger vowed to be able to defend himself if ever attacked again.....He
>continually kept muttering .."Those damn HOMOPHOBES." So he took up
Karate. His
>Karate teacher nicknamed him Gerbil.

Poor baby. You can't get your facts straight. I started martial arts
long AFTER I got out of high school. Which is, by the way, something
you didn't do.

> In his high school years, Roger was involved in the school
band.....he
>was into the wind instruments..........and this helped him later in
life.
>Roger made many freinds with his abilities to play certain wind
>instruments.....all the while thinking----"hey will this guy
remember me
>when he mastrubates? "
> Roger thought allot about masturbating and he loves the idea to
this day.

Fact is, TONDuhh, you came over herfe thinking I'd replace your father.
Sorry, you might not like women, but I do. Looks like you'll have to go
back to your dog and/or your wife. I know they're interchangable.

> So there you have it...HO HO! Roger Wiseman---the man who thinks
>men are after him.

Why'd you wiretap my phone then?

> I can flame with the best------and Roger---you loser------can't.

Since when? If this is any indication, you'd better go back to flame
school, boy.

what you want to check is the covenent if it specifies shall not erect any tv antenna or antenna's it is refering to cable tv protection not amateur radio .
this was put in there to give the cable tv companies a hook as they ate the cost of instalation . the legal interp. of tv antenna or antenna's is for tv antenna's

hope this helped a bit

>

Highly unlikely. If the above was true 10, 6, 2 Meters, and
70cm would have turned in to a CB mess by this time. Yet most of the
problems I hear on the ham band are on 20 and 80 meters, were you need
to pass the 13wpm test (until 4/15/00). So it seems to me that knowing
the code or not does not make a difference on one's behavior.

As for as CB is concerned, I find it a great tool for traveling
cross country for road info and places to eat. It's just a shame a lot
of people use it for spewing foul language and fighting but then again
it's a shame the same thing happens on parts of 80 and 20 meters.

While I won't say they are the best radio to come along, the
MCS2000 is not a bad radio. It still does have a bug in the way it
handles a remote head. The "Big M" supposedly is working on the
firmware fix for this. Also, OTAR is not the highest on the list of
priorities unless you work for the government and even they don't
generally use it.
I firmly believe the Spectra and Astro Spectra may well be the
best units they have brought out in years. They are still available
to government and other law enforcement through Motorola direct.

When I talk about the feds, I'm talking about the democrats and the
republicans. There's not a dime's worth of difference between them.

When the democrats are in power, they take away economic freedoms.
When the republicans are in power, they take away personal freedoms.
Result: Erosion of *ALL* freedoms. They each take their turn.

Saw that picture of your pig wife at http://members.aol.com/jcunham/

What you have been feeding that beast? Keep the pictures waist up. I would say she goes about 250.

This is very interesting "Gotchu". Can you blame AOL for pulling the
switch on "LIttle Chuckie".

From what I heard, two VERY big stockholders complained about his
antics on this and other forums. That shows what "POWER" can do!!

Des, I recommend the ARRL Radio Amateur's Handbook as an excellent reference on how these things work.

Further, there is a company (name escapes me at the moment) in the US that manufactures a single chip receiver that requires one crystal and little more to make it operate.

In these days of cellular telephone excitement there are many companies making circuits for transmission and reception at low power levels and with a minimum of ancillary components. Of course, using these components will not teach you all that much about how to design radio circuits, but it does offer a short path to a working model.

If you have any specific questions, let me know.

I believe this claim to be spurious. N9PGE is not along the bearing line for Doofus (which follows an approximate line from Hudson, New Hampshire to Richmond, Virginia) and signal strength readings of "Doofus" indicate strongest signals in the Middle Atlantic states, which would hardly be likely if he was in Indiana.

With all good wishes,

Kevin, WB4AIO.

I thought his wife had a strange resemblance to Clara Peller.
I hear the phrase "Where's the beef?" is a common one out of Cracker's
wife's mouth which may explain the resemblance.

I hate to remind you, but a contract is a contract. Most HOAs have
exception rules, however. Find out how you can apply for an
exception.

One way to do this is to point out that you're legally allowed to use
up to 1500 watts. If you're allowed to erect an unobtrusive wire
antenna to a tree somewhere, you can say you won't have to run more
than 200 watts. If you are restricted to an antenna in an attic,
you'll need all 1500 watts of power to make up for the "inadequate"
antenna. This will virtually guarantee difficulties with TVI, and the
like.

Faced with that, many HOAs have caved in.

Good luck.

Why? You think it'll make a difference maybe? Carl has yet to give the URL for any of these documents he's talking about. Besides, it was intended to be a sarcastic declaratory statement.

Uh wait a minute there, sonny boy "gotchagoat." Being unable to get on this esteemed board, I was the recipient of a phone call in which I was told that Jeff Herman called the TERMS OF SERVICE department at AOL to find out about my account termination. The gentleman to whom he spoke assured him of no such event and furthermore he never heard of the two lummoxes Youngblood and Schaier who boasted about THEIR having done me in. This is getting to be confusing but not amusing since I'm getting my kicks watching those two nut cases banging their heads against the wall. I think I made my point. As I said, AOL is a very fine company and the number one ISP in accounts. I hope you understand that I live in the very busy northeast where even five phone numbers offered by AOL can be busy for 20 minutes at a clip. I am not having a problem connecting with MindSpring, another top notch ISP. So what's the big deal about the situation? Who knows, I might even add "Earthlink" too?
Doc, AF2Y

Ross:
My opinion is that if people ignore those posts, the scum will just fade away. They only get their jollies by stirring people up. Without that satisfaction, they get bored very fast.

You will notice that for every wacko post, some other goofball just HAS to respond and there it goes...
Stop paying attention to them and they will quickly find another newsgroup to annoy.

Brian Denley

Bogart,
They were talking about the bands themselves. There is the 2 meter band (144-148 MHz in the US) and 10 meters is 28 to 29.7 MHz in the US. Hope that this clears this up for you. You might need a different radio to transmit on these bands at the same time, but don't worry about 10 meters until you pass the 5 wpm test.

The MCS2000 is also available in the remainder of the bands as
well as 800/900 mhz.
True to Motorola fashion, they build them first and then design
them in the field.

When Iris was informed about AF2Y being booted from AOL , all she could do was run around the house and yell, " DOC NOT ON AOL", "DOC NOT ON AOL", "DOC NOT ON AOL".

Now we read where Charles is talking about the freedom of speech on the ISP. What a statement, stupid is as stupid says. Chuckie, go get those sulfur compounds out of your mouth, you stink !!!!

G'Day,
I'm hoping someone can help me with a simple request which I'm asking on behalf of some microprocessor experimenters.

My main questions are geared towards building a low wattage (<500mW) transmitter which uses a removable crystal (27 or 40MHz) for frequency selection. The receiver would need matching capabilites (frequency modification via crystal subtitution) and AGC. I've a grasp on the concepts of FM Tx and Rx using PLL, but no practical experience. I have built my fair share of crystal sets, and so have an understanding of AM detection, but no experience using IF and subsequent mixers.

If someone has a URL for a "dummys guide to basic RF design" or something that would help (circuit diagram for RC Tx/Rx sets, or crystal based Tx/Rx pairs in the HF bands), I would appreciate it.
I'm using 27MHz and 40 MHz since they are the standard frequencies for RC cars in Australia. I plan on using crystals for RC cars (from high Q in Sydney) in my circuits. This way I'll be avoiding my experiments causing any issues with DOTC. The hoped for design will use a "data in" and "data out" pin in the transmitter, receiver respectively. I beleive that RC cars are limited to a bandwidth of 10kHz, so our processor designs would have to take this into account.

I would appreciate any assistance i can obtain. Most of us don't have a lot of the FR test instruments you would have, so designs which do not rely so heavily on these instruments would be appreciated, However if this reasoning is unreasonable, then please let me know. Please send info to des.bromilow@citec.com.au and to the list.

Many many thanks in advance,
Des Bromilow

Its "NOMAS" time on AOL for the Clifton libeler, AF2Y. His XYL Says "HE CRazy"!! (Banana nose was cut loose by AOL for his libelious posting)!!

His XYL IRIS was reported to have blown a fuse when she tried to log on AOL and got a rejection window. Sorry Iris your chosen husband should clean up his act. ISPs like AOL do not take kindly to the antics he has indulged in lately. You need to keep a short leash on that keyboard "DOG" and teach him to be house broken .

A big thanks to Lenny & Bob for taking care of AF2Ys nasty posting habits due to your influence at AOL!!

Source record: 120401

Once you sign close on the house, you will have signed documents binding you to the convenants
binding the property. It takes an act of congress to pre-empt them (as was the rare case with DBS
dishes).

On the other hand, subdivisions are attractive real estate investments and you really should not let a
"hobby" stand in the way of a better investment decision. Move into the subdivision and buy I house
well suited for attic antenna's and/or where 14Ga, wire coming out of the window to a tree won't be an
eyesore. It usually is quite invisible after the weather darkens the copper.

I myself have a full G5RV bent at various angles in my attic. There are no lobes but the apex of my house is at least 40 feet above average terrain and my 80 meter is fine at 100W (not to mention 40, 30
20, 15, and 10, all with one antenna. I have an Amp which can be used subject to RF limits (but I can
still run 500W at 80 and 40 meters up there). I have heard anectdotes of RF heating problems in attics
but can detect no detectable heat source up there when running 500W at 80 meters and 14Ga wire.

You may be surprized and surprize others with what you can do with attic antennas. Just follow the RF ERP rules and double check for possible heat sources.

AMEN! Ed.

Finally someone starts to really get at the heart of
the difference between being technical 50 years ago
as opposed to today. It didn't take a whole lot of
study, experience, etc to know a great deal about
the "state-o-the-art" radio in the 50s. Most
recievers were just a few more tube stages
beyond that of a simple 5 tube AC/DC broadcast
radio. The same was true of transmitters.
Frequency stability meant crystal control for most

people.

Compare that to the sets of today with the incredible amount of digital electronics, memories, software controled, etc

Cheers,
Bill K2UNK

So you built the gear out of both manuals and conducted side-by-side
tests?

For years, the League's Handbook was the greatest selling technical
publication in the country. That accomplishment was not due to just
amateurs. Heck, the military thought so highly of it that it was
used as a radio/electronics training manual.

> now.

"VERY good" compared to what ? A Kenwood ? The MCS2000 is a flimsy piece
of plastic junk ! Unfortunately it reflects the attitude of the new group
in charge at Motorola - put out cheap, poorly thought out low cost, low
end junk to compete with the proliferation of inexpensive mobiles put out
by other companies.

> Nice radio all around, but I like the Spectra series better. Too bad
> Motorola orphaned that line.

Well, not really, the Astro Spectras have picked up the torch. Also
I believe the regular analog Spectras are still available on a 'per
customer' basis. (ie. if you yell loudly enough, you can get one).

> > BTW, this is becoming the standard radio for police and public
> > safety.

AHAHAHAHAHAHA....you wish ! it's a piece of shit radio, the only
agencies that are buying into them are the ones that can't afford
Spectra's !

Anyone that thinks a 110 watt A-9 Spectra with INTEGRATED siren
packages, INTEGRATED vip capabilities, and Astro IMBE capability
is inferior to a flimsy piece of plastic, that uses all kinds of
hideous add on kluges to achieve the same things a Spectra does,
is smoking crack ! Also let's see an MCS2000 do OTAR, it ain't
happening !

It's a junky piece of shit ! If you have a say in it, insist on
a Spectra !

LONG LIVE SPECTRA/ASTRO SPECTRA !!!

>>Prove I am gay.
>
>Ok..who else would fantasize about men masturbating to their photo.
>You've stated this several times. You are Gay. No doubt about it.

Bwhahahahahahaha! You have the disability of not being hampered by information. YOU are the one who wanted the picture of another MALE. YOU drove by his house, taking pictures of it, called me on the phone wanting phone sex, and I speculate that you want the pictures to masturbate to, and you get shrill in your denials. Looks like the red panties guy is you, Tonduhh. And I'll let Riley know.

>You live at home with Mommy and you drive a beat up Toyota with a >big ying yang sign on the side. Tell me that ain't gay!

It sounds like you're the EXPERT at being GAY, TONDuhh.

>>YOU were the one who so desperately had to have a
>>picture of me that you drove out of your way to try and get one.
>
>Dream on Gay Boy. Please don't include me in on your fantasies.

Oh, so you're denining you stalked me? Hmmm, that's not what the archives on Deja says.

>>My mother lives with me, not the other way around.
>
>Yeah right. Reminds me of the state vegatable of West Virginia. PUMP KIN.

"Vegetable," you high school dropout.

>By the way. Stop using your mom's Social security money to go to school. The
>money is hers. Roger, it's sick of you stealing the money that your parents
>worked hard for. Shame on you, leaching off your Moms limmited income. Sell
>that radio and give that money back to her.
>
>>I'll be 45 in September
>
>So. Count yorself lucky. According to medical surveys..gay may don't live much
>longer than that. Can we hope for a silent key soon?

So how are you living with AIDS, TONDuhhh? Tonduhh has had quite a few std's. Of course, TONduhh's time as black inmate Rufus Washington, Jr.'s prison bitch might have had something to do with it.

>>.I've already received a BA
>
>Oh wow a BA. I mean who is impressed here? Obviously you have
>impressed yourself because no one gives a rats ass.

Obviously YOU do, otherwise you wouldn't have responded. Of course, there's a jealousy factor, since you didn't even get a high school diploma, did you? OF course, one couldn't expect very much out of mentally-challenged TONduhh.

>Unemployed dentally challenged LOOSER.

From what my neighbor says, your buckteeth could open up walnuts. He said he was going to recommend a good dry cleaner, since your clothes reeked of drool.

>Using government funds to go back to
>school. Stop taking money from mom. Get a job and let mom have her
>Social security money.

Poor baby. Now crawl back into your hole in the ground "house." And DO work more hours at your minimum-wage "job" so I can reap more benefits....<snicker>.
Idiot.

>Yeah so why didn't you. It could not be because you were too busy
>working.

Bwhahahahahahahahaha! My Social Security records reflect otherwise.

>Excuses, Excuses. I've heard them all before. Face it Roger. A gay
Mommies boy
>who cannot get along in society should not be on ham radio.
I thank GOD that

Oh, is the right-wing hypocrite also a jesus freak? What a surprise. Does your GOD tell you to act this way, or is it the snakes you handle during the services? Oh, that's not a snake, that's your preacher's schlong.

>you did not go any further due to your inability to pass those tests.
I >only hope that Riley catches you jamming again and that'll be the
end >of you on ham radio.

Riley didn't catch me. You said you sent your child molesting uncle over here with your ratted out sw radio.

>behind those blinds gay momma boy Roger.

Obviously, you've missed the point of the martial arts. I WON by not doing anything, while you LOST and still are obsessing about me.

>
>>Riley didn't catch me at all.. or are you now admitting you LIED about
>>your child molesting 'uncle" from Wheeling who supposedly drove by
here?
>
>There you go again. Antisocial gay boy Roger Wiseman. Poor paranoid
gay roger
>Wiseman. Calls everybody names.

Hey, dumbass, reread this whole posting by yourself. Can you say "Hypocrite?"

>Toyota? OH I'm impressed. That rusty piece of shit you call a truck
>with the >Ying Yang symbol on the side. Proclaiming to all the world
don't mess with me.

Poor TONDuhh..his rusted, beat up white 4-wd truck isn't in good shape either. It has dents and scrapes from Tonduhh's many DWI's. The salt has eaten out the frame of his "truck", and it obviously has a couple of hundred thousand miles on the engine.

>I'm badass Roger Wiseman. Kung foo artist. AND IF YOU DRIVE BY >MY
HOUSE I'LL HIDE BEHIND MY BLINDS AND TELL MY MOMMY.

Poor baby. Your pathetic cb-mentality type of bullying didn't work, Tonduhh. And now you're exhibiting what is normally called "sour grapes." Obviously, you didn't learn anything with those two free lessons at the local karate school about the martial arts.

>Well well. Now I'm just guessing. So everything else is true...but now
>I'm just guessing.

Poor Tonduhh..his hybrid chipmunk -and Ernie from "My Three Sons"
appearance has stunted his growth mentally and physically.
Everything you've ever said is a lie.

>Notice he did not argue against the point that he got into martial
arts to
>defend himself because of his gay activitesHope not to see you later
>GERBIL boy.

Funny, your suppositions are quite a stretch, chipmunk boy. I didn't
say why I got into martial arts at all. And you shouldn't project you
sexual activities onto others. Or is your lacking in one department the
reason why your wives left you?

For this go around, I am sure; that is about all they can do in the time they have. But for the future, I sure hope that the QPC takes a hard look at the syllabi and the questions. That is the time I will expect to see decisions being made about the content and the door opened up for new questions.

No, the amateur radio community did not assist. They were not called
upon. It was strictly a CHP and FCC joint incident.

You should know abou telling lies Pork Butt, You lied about the E mail
you sent the FCC, then said it was a "mistake" I hate to tell you this
but , Jeffs comments are no prayer book either. In any event"Banana
Nose" is off AOL . Why don't he get back on to prove us
wrong "cancelled fatboy"?

If you put in a good number of (what you think) are fair maximum bids, you do occassionally pick something up for a good price. If you absolutely MUST have some specific item, be prepared to shell out the BIG bucks...

I don't know if it's because people on eBay can't be bothered to check retail prices, or are too lazy to expend the effort required to shop around, or simply make it an ego thing to "win" but it really is pretty wild how high some prices do go.

Matt Erickson <kk5dr@hotmail.com> wrote in message news:3892F643.E5458308@hotmail.com...
The buyers on E-bay are INSANE!

Chip wrote:
I've been looking for an inexpensive 2M mobile and was pricing the Kenwood TM-261A. I thought I'd check E-Bay for the heck of it to see what USED ones were going for.

This one went for $229.50

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=233291630

This one only made it to $182.50 but didn't meet the "Reserve" price:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=236669111

Then I checked AES's _NEW_ price and this is a direct cut and paste:

KEN TM261A KENWOOD 50W 2M FM XCVR/TTP# 179.95

Save money - buy new !

Finally, someone out there figured out that in order to keep the amateur service it has to have a political critical mass. The politicians count votes when it comes to spectrum, if you want space on the usable portions of the spectrum we had best bring in plenty of young people. If code has to go to accomplish that, then good riddance to code. Personally, I copy about 13 wpm, well worth the effort...today I can copy the identifier on repeaters and an occasional aurora contact on six. Hardly worth the effort.

If you really want to keep people out of the hobby you should make the copy RTTY manually.

It's said that the home's owners reflect their personalities. I wonder what that shithole in Hiram says about it's owners? I bet the roaches have a feast every night. I can just imagine what the Center for Disease Control would think about the delapidated cesspool on Hiram-Sudie Road in Hiram..occupied by the two HOGS. I hereby nominate teh song off the Beatles white album "Piggies" as the theme song for the web page. What's his family crest say? "The right hand is stronger" or something like that. It's probably true, from O' brien's constant lifting of a bottle of alcohol and spanking his monkey.
I can see that O' Brainless' drug and alcohol abuse has gotten worse. In those pictures he's so wasted he can barely keep those piglet eyes open. Two "honorable discharges" Bwhahahahahahahaha..,too bad the total time in service is less than a full term on either.

Poor Jimmy, filth living in squalor and filth.

It all depends what you're looking for.
A new HAL ST-8000 RTTY modem goes for $4000. A brand new one went for
$800 and a used one went for about $400 recently on Ebay.
Know your prices, be a smart shopper and you won't get burned. Worst
that happens is you don't "win" the auction.

3550. Internet Accessible AR-Cluster

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-29 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <86vq8i$le2$1@nnrp1.deja.com>
Source record: 120158

You are welcome to connect to the internet accessible AR-Cluster at
KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH.
Please enter your QTH in the form: Chicago IL or Oslo Norway so that we
will know where all our new friends are from! You will also be
reminded to SET/LOCATION, that's optional but recommended. If you set
your location, then the AR-Cluster will calculate beam headings for you
to various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION your_call

You can correct any errors using the SET commands.

For more information on AR-Cluster including a Logon Tutorial and
Command List go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet
connection. Its a huge advantage as then your logging program will
monitor the dx spots and alert you to contacts you need.

However, here are very simple instructions for using software already a
part of Win95/98:

First connect to your ISP as you normally do when using the internet.
Click Start then click Run.
In the box enter "telnet 209.32.226.63" (without the quotes of course).
Now click OK.

You should now be connected to the KC0DJO AR-Cluster.

Enter your call. If what you type does not display, then you will have
to turn on local echo. In the Telnet window click on Terminal /
Preferences.. and check Local Echo and then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C

HELP

Welcome to the KC0DJO AR-Cluster.....and 73 de Ron N5IN

Unlikely.

>Properly handled and publicised, this change can bring millions of new
>hams onto the air in the next decade,

Millions? Yikes! There's already a code-free license for V/UHF which
didn't draw millions, so you must believe that with the creation of
a slow-code HF ticket, millions will flock to HF.

Let's crunch some numbers: Our M/HF spectrum consists of 3.75 MHz,
with say, only half of it, 1875 kHz, useful for communication at
any one particular time of the day. If suddenly, as if by magic,
all current licensees were granted M/HF privileges, we could possibly
have 670,000 have attempting to fill that 1.875 MHz. Okay, I'll grant
you that folks have to work and sleep, so let's say at any one time,
we have one-fourth of all 670 kilohams on the air, with two per QSO.
That would mean each QSO would be separated by just 22 Hz. =:o

Okay, let's pretend that all 3.75 MHz is available all the time,
with say, one-tenth of all operators on at any one time: Now
each two-person QSO is separated by 112 Hz.

Worried that I didn't take into account frequency re-use? Suppose
we could manage three simultaneous QSOs on a single frequency;
each such grouping would be separated by 336 Hz.

That's with our current 670 kilohams. And you desire "millions"?

Why are you bringing a .scanner thread over to the amateur NGs, John?
But since you're here, tell us in what manner you're abiding by the
Amateur Radio Service's charter, as mandated by the FCC:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.
(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

Tell us about your lastest project. (You do have a soldering iron, right?)
What have you built and operated on the air?

Hi Sam,
What HF spectrum are we in danger of losing that would warrant lowering
the code speed? (I assume you must be referring to HF, for we've had a
code-free V/UHF license available for almost a decade now.) As we speak,
proposals stand which would award us more HF spectrum with our current
numbers.

From: bogart <b_o_g_a_r_t@my-deja.com>
Message-ID: <86tglm$4t2$1@nnrp1.deja.com>
Source record: 120187

Hello,

Just received my passing score as a no-code technician, and am awaiting my license from the FCC. The other week I overheard some folks talking on the radio and they kept saying things like "two meter" and "ten meters", etc when talking about their radios. I only have a cheap Kenwood that I change channels with three wheels that kind of look like the odometer in my car. So, I know my radio is too cheap to have any meters on it, but what could the second meter be for, or for crying out loud, why would anyone want a radio with TEN meters on it? What are they all for? A neighbor that has moved away used to be a HAM, and one day he was showing off all of his equipment and what he likes to do with it. I remeber when he was harping on his watts and srw's or swr's, and he was showing me on this separate meter that he kept switching a switch to show me reflections or something. His meter would show more than one thing, so why would a radio need two meters or TEN! meters? Why can't I just buy outside meters like he had and keep my radio cost down? I am sure a big, expensive radio that has many meters wouldn't make sense for me. I am not looking to buy anything soon, but would like to be more ready for when I can.

Thanks for helping a new HAM!

I've been looking for an inexpensive 2M mobile and was pricing the
Kenwood TM-261A. I thought I'd check E-Bay for the heck of it to see
what USED ones were going for.

This one went for $229.50

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=233291630

This one only made it to $182.50 but didn't meet the "Reserve" price:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=236669111

Then I checked AES's _NEW_ price and this is a direct cut and paste:

KEN TM261A KENWOOD 50W 2M FM XCVR/TTP# 179.95

Save money - buy new !

Congratulations!

>The other week I overheard some folks talking
>on the radio and they kept saying things like "two meter" and "ten
>meters", etc when talking about their radios.

They're referring to wavelengths; 2 meters is the approximate wave-
length of frequencies between 144 and 148 megahertz (MHz); the formula
is: wavelength = 300 / f, where f is the frequency in megahertz. A
"meter" as a metric measure of length of about 39.37 inches; it's not
related to meters used in measuring devices.

> I only have a cheap
>Kenwood that I change channels with three wheels that kind of look like
>the odometer in my car.

Don't be so quick to disregard your radio. I too have a hand-held VHF
radio with thumb-wheel switches like yours. With both It's non-electronic
frequency display and manually entered frequency switches means less
battery drain. If it sounds good on transmit and receive, that's all
you really need for now.

Feel free to email me if you have ANY questions at all.

For most Extras, that's all it is, because most Extras rarely (if ever) light up on HF.

Not that there is anything wrong with an Extra spending his or her entire on-air time on an HT, but too many of them think that they are something special because the were able to copy 20 WPM on ONE occasion, years ago.

I got my Novice ticket nearly 20 years ago, and upgraded immediately to Technician (thus "Tech+") by taking the General written exam. If I had ever been willing to take the time to get my code speed up, I would have been a General (and I am looking forward to the change). I will not likely go to Extra because an Extra can't do anything that I want to do which I can't do as a General.

While a lot of the Extras are whining about this change, I think that given 5 years they will see that it was the only way to SAVE ham radio. The artificial barrier imposed by "Titanic Mode" skills have kept MILLIONS of kids from getting ham licenses over the decades since large chunks of the General allocation were sliced off to create Advanced and Extra in the "Incentive Licensing" debacle.

Properly handled and publicised, this change can bring millions of new hams onto the air in the next decade, bring back school ham clubs, and pull ham radio's foot back out of the grave.

. I will refrain from name calling to present the facts.

Here are the facts.
Roger Wiseman is pissed off because he got a letter from the FCC. He was caught jamming 20 meters by playing music. He was doing this under the direction of his buddy who will remain nameless. If you go to the rain report, you will see a letter to Roger Wiseman warning him to stop his illegal activities. You will also see letters to his friend regarding jamming and argumentative behavior, very much like what is exhibited by these very same people in this newsgroup.
Roger was outed as a jammer on 3950 by Myself, N8WGM. Now Roger is pissed off that I got him in trouble with the feds for his illegal activities. Sorry Roger, but Jamming scum should be removed from the ham bands. You are jamming scum.

Now Roger has attacked me when I made a post to someone else. I did not even refer to KC8JBO at all. He just came out of the woodwork and attacked me. I had no contact with this
antisocial jamming scum for several months after he was caught jamming. He just decided to attack me for my expose of his illegal activities. His vigorous attacks and his crying about stalking was a way to keep me from exposing his jamming. Roger could not stand the spotlight that was showing him to be a jammer.

>"Vegetable," you high school dropout.
Roger said

Roger then said......
>Oh, so you're denining you stalked me?

Roger, as long as we are going to correct each others spelling, it's DENYING not DENINING

>From what my neighbor says, your buckteeth could open up walnuts.

Your neighbor has no teeth. You know the old story of how anyone can figure out that toothpaste was invented in West Virginia? Because in any other state it would have been called TEETH paste.

>Poor baby. Now crawl back into your hole in the ground "house."
>And DO work more hours at your minimum-wage "job" so I can reap more
>benefits....<snicker>.
>Idiot.

Roger lives with his mother in a 650 square foot tiny little house and lives off his mothers social security. He depends on a government grant to go back to school. The stereotypical hillbilly.

As far as my house is concerned, my home is far superior structurally to yours. I've seen your "house" as you like to call it and all I can say is that it does have the look of small to it. My home is designed with superior fenestration. My house is not 10 feet off the road as yours is. My Lot is 15 acres. Your yard is 1500 square feet.
Roger, your house is tiny. It 's not big. How can I say this without offending you.
It's a tiny little house real close to the road. If there is any question to minimum wage, it would be with you.

>Riley didn't catch me.

Then why the letter on the rain website?
LIAR.

>My, my TONdUhhhhh the wonder chipmunk has been stagnant at Advanced
>class since 1994.

At least I can say I'm an advanced class, General class electronics wiz. I still wonder why a person who is supposed to know so much about electronics still a general class licensee?

>>>12 years of training..wanna find out?

Find out what?
Please--no threats.

>Obviously, you've missed the point of the martial arts. I WON by not
>doing anything, while you LOST and still are obsessing about me.
>

No you've missed the point. I did not want this stuff to happen. You brought it to yourself due to your jamming on the ham bands,. I live about 60 miles from you and you got caught. Tough luck on your part.
I called you on your activities last summer and not too long after you got your letter from Riley.
Don't you see the corellation to the fact that I discovered your jamming activities, and you got a letter soon after my drive down your road? You lost your bet that you would not get caught. And you got real mad because I've shown the spotlight on your jamming.

>Poor baby. Your pathetic cb-mentality type of bullying didn't work,

It was not meant to be a bullying tactic. You were suspected of being a jammer. I investigated. I taped. I had relatives monitor your activities because they live not far from you just over the River. You got caught. That was the strategy. I believe they call it self policing!
You Loose!

>And now you're exhibiting what is normally called "sour
>grapes."

Why would sour grapes have anything to do with this? You got caught. What I did worked. You are now on the rain website branded as a jammer. Do it again and you are gone!
Roger said
>Everything you've ever said is a lie.

I say
Here is the truth------
You do live with your mother.
You do live in a very small house.
You do consider yourself a bad ass kung foo'er--you've said so many times.
You did hide behind your curtains.
You did get caught by the FCC jamming
You drive a very small pickup truck--with a Ying Yang kung foo sign on the side.
You do have frieinds who jam and have been caught doing so.
You do get a government grant to re-educate yourself.
You do depend on your moms social security money to live.
You are argumentative.

But I cannot continue on with this crap for I'm going on vacation to My house in Florida for the next few weeks.
Have fun Roger.....just don't get caught jamming again!

Illegal wiretapper and stalker
N8WimpyGayMale whined in message <20000129012446.03704.00000091@ng-fi1.aol.com>...
>. I will refrain from name calling to present the facts.
>
>Here are the facts.

You mean here are the lies.

> Roger Wiseman is pissed off because he got a letter from the FCC. He was
>caught jamming 20 meters by playing music.

No, I was sent a warning letter. The FCC didn't "catch" me doing anything, Ernie. You and other submitted false evidence to the FCC.

He was doing this under the
>direction of his buddy who will remain nameless. If you go to the rain report,
>you will see a letter to Roger Wiseman warning him to stop his illegal
>activities. You will also see letters to his friend regarding jamming and
>argumentative behavior, very much like what is exhibited by these very
>same people in this newsgroup.

Cry me a river. But how many people saw your stalking of me, just to get a picture of me to masturbate to?
Even the Police chief read copies of your posts, (I submitted them when I filled out the report) and said you must be some kind of nutcase.

> Roger was outed as a jammer on 3950 by Myself, N8WGM.

I've never transmitted on 3950, DUMBASS. Riley's letter only mentions the 20 meter band, which as an "Advanced class" licensee you should know is on the 75/80 meter band. Either you can't read, or your a extremely stupid person, or both. I'd say both.

>Now Roger is pissed off that I got him in trouble with the feds for his >illegal activities. Sorry Roger, but Jamming scum should be removed from the ham bands. You are jamming scum.

Suuuuuuuuure I am. And yet I received a VE appointment. Bwhahahahaha! Something YOU can't claim, can you, bucktooothed choad?

> Now Roger has attacked me when I made a post to someone else. I
>did not even refer to KC8JBO at all. He just came out of the woodwork
>and attacked me.

Translation: WHAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA!
Roger's picking on me, WHAAAAAAAAAAAAAAAAAAAAAAAAAAA!
Roger's kicking my ass with words, so maybe I'll drive by his house and
TRY to take it to a physical level, because I'm outmatched.
Whhhhhhaaaaaaaaaaaaaaaaaaaaaa!

> I had no contact with this
>antisocial jamming scum for several months after he was caught

>jamming. Roger could not stand the spotlight that was showing him to
>be a jammer.

TONDuhhhh was caught several times for being a child molester, yet he
never mentions that fact. People who were on this newsgroup KNOW that
you DID stalk me. YOU never address that, do you?

>
> >"Vegetable," you high school dropout.
>Roger said
>
>Roger then said......
>>Oh, so you're denining you stalked me?
>
>Roger, as long as we are going to correct each others spelling, it's
>DENYING not DENINING

Post editing, Chipmunk boy.
Try harder. Your lack of education is quite apparent in your postings,
TONDuhhh. Your consistent use of substandard English and numerous
spelling errors highlight your severe learning disability student
status.

>
>>From what my neighbor says, your buckteeth could open up walnuts.
>
>Your neighbor has no teeth. You know the old story of how anyone can
>figure out that toothpaste was invented in West Virginia? Because in
>any other state it would have been called TEETH paste.

I wasn't discussing my neighbor's teeth, I was discussing YOURS,
chipmunk. You drool so much, you never need to shower. Your quite
yellow and rotten teeth make your smile look like a pair of dice.
At least we don't live in a HOLE, chipmunk.

>
>>Poor baby. Now crawl back into your hole in the ground "house."
>>And DO work more hours at your minimum-wage "job" so I can reap >more
benefits....<snicker>.
>>Idiot.
>
> Roger lives with his mother in a 650 square foot tiny little house

and >lives off his mothers social security.

Prove it. I don't have to live off of anything.
The house is at least 1080 sqare feet. Of course even that beats the
trash dump you call home.

>He depends on a government grant to go back to
>school. The stereotypical hillbilly.
>As far as my house is concerned, my home is far superior structurally
>to yours.

Bwhahahahahahaha..you live in a HOLE in the ground. It has TONS of junk
and trash in your yard. You have to live way out of town because
usually the police were tired of visiting for your criminal activities.
You were kicked out of your previous neighborhooods because you
wouldn't leave the neighbor's kids alone. TONDuhhh couldn't get along
in previous neighborhoods, that's why he has to live way out in the
middle of Shithole, Ohio.

>I've seen your "house" as you like to call it and all I can say is that
>it does have the look of small to it. My home is designed with superior
>fenestration. My house is not 10 feet off the road as yours is.

Get those thick, coke-bottle bottomed glasses checked, Ernie..my house
is 30 feet from the road. The edge of the sidewalk where the
landscaping ties is 10 feet. The house proper is 20 feet from the
sidewalk. 20+10 = 30. Try again, and this time take your shoes off to
count if you have to, dropout. Your hole in the ground probably is
superior to your usual digs, a cardboard box.

>My Lot is 15 acres. Your yard is 1500 square feet.
>Roger, your house is tiny. It 's not big. How can I say this without
>offending you.
> It's a tiny little house real close to the road. If there is any
question to
>minimum wage, it would be with you.

You need to get your coke-bottle bottom glasses fixed, Ernie.
When you have to go to the bathroom at your house, you pick a corner.

>>Riley didn't catch me.
>
>Then why the letter on the rain website?
>LIAR.

You posted that your child molesting and on the take ex-cop uncle from
Wheeling drove by with your shitty sw radio and taped me. Get your lies
straight.

The letter doesn't give any specifics about times and/or frequencies.
You are lying through your buckteeh.

>>Steven A Tunder, N8WGM

>
>No you've missed the point. I did not want this stuff to happen. You
>brought it to yourself due to your jamming on the ham bands,. I live
>about 60 miles from you and you got caught. Tough luck on your part.
>I called you on your activities last summer and not too long after you
>got your letter from Riley.

Bwhahahahahahahaha. Liar. You started this little flamefest, all
because of your homosexual attraction. I ask again, what straight man
would so desperately want a picture of another man, going so far to
driving by their house, about 120 miles round trip, trying to get a
picture?

>Don't you see the corellation to the fact that I discovered your

"Correlation," you high school dropout.

>jamming activities, and you got a letter soon after my drive down your
>road? You lost your bet that you would not get caught. And you got
>real mad because I've shown the spotlight on your jamming.

What bet? I've never made such a bet. You never let the truth get in
the way of your lies, chipmunk.

>>Poor baby. Your pathetic cb-mentality type of bullying didn't work,
>
>It was not meant to be a bullying tactic. You were suspected of being
a >jammer. I investigated. I taped.

You wiretapped my phone, recorded WITHOUT my permission to do so. You
made threats during the week before you drove by my house.
You are nothing but an obsessed, bucktoothed faggot.

>I had relatives monitor your activities because they
>live not far from you just over the River. You got caught. That was the
>strategy. I believe they call it self policing!

You said on here that your relatives lived in Wheeling. Make up your
mind, dickhead.

>You Loose!

"Lose." Now I know the schooling in Ohio is substandard. Of course, you
aren't much for a teacher to work with.

>>And now you're exhibiting what is normally called "sour
>>grapes."
>
>Why would sour grapes have anything to do with this? You got caught.
>What I did worked. You are now on the rain website branded as a
>jammer. Do it again and you are gone!

Suuuuuuuuure I am. Why didn't Riley ever respond to my calls and
letters? Hmmmm? Maybe he discovered what a liar you are chipmunk.
I suppose you had practice lying when you had to lie to the Social
worker who came by to investigate when your father sodomized you.

>I say
>Here is the truth------

You wouldn't know the truth.

>You do live with your mother.

My mother lives with me.

>You do live in a very small house.

1080 square feet, Ernie. How did you ever pass the Advanced class exam
with your poor math skills? Oh, that's right, you paid the examiners
off.

>You do consider yourself a bad ass kung foo'er--you've said so many
>times.

I've never said that. _You've_ said that about me. Yet, you wouldn't
DARE get out of that ratted-out and dingy white pickup truck with the
DWI dents. Pussy.

>You did hide behind your curtains.

Translation: I didn't fall into your game. I didn't care to talk to an univited guest. That's my right.

>You did get caught by the FCC jamming

This statement contradicts the warning letter and what you posted above.

>You drive a very small pickup truck--with a Ying Yang kung foo sign on
>the side.

So? Oh, and it's a symbol, not a sign, you functional illiterate. Get your head out of your ass, Ernie.

>You do have frieinds who jam and have been caught doing so.

I have no control over what my "friends" do, dumbass white trash goofball. "freinds," bwhahahahahahahahahahahahahahahahaha!

>You do get a government grant to re-educate yourself.

Poor baby. It pays for a lot, but I still get other monies. And we don't have to worry about finances, either.

>You do depend on your moms social security money to live.

Hell, BOY, we get money from other sources, like investments. Not something a chipmunk who lives in a hole in the ground with a dirt-floor could fathom. You'll get over it, Ernie.

>You are argumentative.

Poor baby. You stay out of my face and I'll do the same.

>
>But I cannot continue on with this crap for I'm going on vacation to
My >house in Florida for the next few weeks.

Translation: Ernie has no endurance, and knows when he's outmatched. And you call that run-down delapidated trailer a "house" in Florida? I guess you go down there to molest the children in Florida during the winter.

>Have fun Roger.....just don't get caught jamming again!
>N8WGM

You mean like you do on 3950 on a regular basis?

I would not listen to this clown. He bootlegged on HF with no call for three years. He portrayed himself as a Canadian named Kurt. Not to mention the fact that he bootlegged on twenty meters the last five years with a 5wpm code endorsement. He participated in the orginized jamming on twenty meters with the likes of WB2OTK (liscense cancelled), N4CND (drug addicted trailer trash), KA9BSD (known jammer, alcoholic, frustrated bachelor, Gay?), KK9G (known jammer, wannabe hacker, disability faker),N9PGE (alcoholic,divorced, fired from Elkhart County SO for drunkeness, also a known jammer. Recently posted as doofus jammer), KC8JBO (Recently caught jamming on twenty for the second time, NAL to follow. 50 years old and lives with his mother!) This is a great group to give advice. The Good fellows have conspired to jam HF frequencies for years. This group is responsibile for 90% of the jamming on HF today. Other members of this group who are not currently jamming are W4NTI and AF2Y. Although they are not jamming now, they have jammed in the past and will probaly do it again. This group has terrorized hf for five years, and they should all have their tickets revoked. (VA3GJB will lose his soon).

50?????????? Try 45, DUMBASS. Why'd you pick up that varicosed-veined
old fart you married? Too many beers that night? God, I wouldn't claim
that as any trophy. Suuure I was QRMing on 20, which frequency and
time? You better clean up that filthy rat's nest you live in, O'
Brainless, before the roaches completely take it over.

Prove it, you fatassed bubba. I haven't even been on 14.313 at ALL.
I wonder how many times the Health department has been to your disease-
infested hovel in Hiram. Riley was told all about your deliberate
jamming the spanish speaking stations on 14.320 or
thereabouts...because I let him know all about it.

great

While WA4AMP here received a warning letter for jamming on 75/80 and
the dumbass tried to coordinate his jamming on 2 meters. O' Brien has
issued death threats over the radio, used profanity and engaged in
world class jamming activities. He married his current "old lady" after
a twelve day drinking and drug using binge.

So it's better to embarrass all "prominent" Extras in Arizona?

>> At this point, it is either embarrass HIM or embarrass YOU. If you
>> provide his call, he'll at least have the opportunity to refute your
>> charges.

>Why would I be embarrassed?

Because you got caught making up "facts" again. If you want to carry
any credibility on the NGs, back up your examples with evidence which
can be confirmed by third parties, or at least give the "victim" in
question a chance to defend himself.

>The ham in question made a big name for himself in the Prescott, Arizona
>area in the late 1980s.

So now you've pinpointed his approximate QTH and have limited the
embarrassment to just "prominent" Extras in Prescott. The only fair thing
to do now is to give his identity and provide him the chance to respond
to your accusations.

>The only one I'm embarrassed for is Jeff. He is so impressed with being
>an Extra that he thinks all Extras are something special, and is
>convinced that I can't be telling the truth about this.

Wrong again. I'm only interested in giving an accused a fair chance to respond so as to hear both sides of the story. There are too many one-sided accusations made in this forum. Very distasteful, and not gentlemanly at all. Fight fair, Keith.

Inflammatory, rumor and innuendo. What relevancy does your post have to this NG?

Are you sparking debate about someone's sexual orientation? Is it legitimate to criticise a guy because he is living with his Mom. More children, in my view, should do so, caring for their aging parents. Not everyone has the good fortune of living in a lush home. Thank God if yours is more substantial.

And finally, respected poster, does this leave your sexual orientation up for grabs?

i just picked up one of these VHF/UHF mobils at the HRO fire sale, and i
was wondering if this rig can crossband.
there is nothing in the manual about it but i heard somewhere that it
does.
a pretty nice radio for one with poor eyesight (like me)

does anyone know how to do it, or where i might find out?

thanks,
K6DHL

The problem is that a lot of people who passed the exam CAN'T read code at 20WPM.

At this speed, the exams can be MEMORIZED in the same way one memorizes a song. Have you ever heard the first couple of notes on the radio, and known what the song was (and all the words) before the THIRD note? There aren't that many different exams -- play the tapes, over and over, and you will get sick of them but you will be programmed when the time comes for your exam.

This was the method used about 20 years ago, when a guy named Dick Bash developed a program to teach people to pass the tests -- not to LEARN anything more than "If you see this cue in the question, this is the answer." There are a lot of hams who didn't know a battery from a capacitor when they got their Advanced tickets (to be fair, most of those either lost interest or they did learn more about electronics as time went by).

The folks at the FCC office where I took my Tech exam (in 1981) joked that "This guy will guess that song in ten notes!" and they could often tell when recognition set in during the exam. To be fair, the majority of those sitting the tests hadn't done this, but many had, so I guess there are a lot of brainwashed Extras out there still.

When I took my Novice, I had to SEND the code, not just recognize it. I knew a lot of people who never again touched a key or keyer, and a lot of them went on to Advanced or Extra. I have known Extras who can't pull their own calls out of a string of 10 random characters, sent at any code speed -- and I knew one gal who could send at better than 40WPM on a straight key! She was a General, and only because her husband had talked her into becoming a ham and worked her through to the Tech license, when she discovered that she didn't much like voice but she loved CW!

There is room for everyone out there. Including slow-code Extras. But don't accept ANY license as proof of ANY skill level.

Source record: 120046

Of course I mean by the FCC, that's who issued my amateur callsign and regulates the modes and frequencys upon which I transmit. While the ARRL suggests the following it doesn't really match the reality of 40m. It's a dumb question to begin with BD, Lloyd knows where to find the answers, after all he's Chief of Communications for BARF.

7.040 RTTY DX - You'll find much more QRP CW op's here than RTTY DX most RTTY DX is calling above 7070 KHz where the rest of the RTTY op's are.
7.080-7.100 RTTY

No mention is made of PSK31, most of those op's hang around 7070 KHz, and Hellschrieber on 7063. So again the answer is 7.000 to 7.300 MHz. So does that mean the CW "segment" ends at 7040? After all the ARRL suggests that freq is for RTTY DX. Or maybe they mean 7040 +/- 5 KHz? Does the CW "Segment" pick up again at 7045 and end at 7080 KHz? If after listening for a few days you still can't figure it out then perhaps you should cut an antenna for 3950 KHz and be done with it.

p.s There are only two CW only portions of amateur bands 50 to 50.1 and 144 to 144.1 MHz.

Nope. Blake doesn't post to the amateur NGs; it began in .scanner,
and you cross-posted it to .misc to widen the audience.

But since you're here, tell us how you're abiding by the Amateur
Radio Service's charter, as outlined by our government:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:
(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

Be specific now.

This may save amateur radio or it may not. I think initially that there will be quite a few upgrades, me included, but as time wears on only the dieharded will endure the race. I am glad to see the restructuring but I do believe that the code requirements should have been higher for the EXTRA class. Maybe they should have dropped it to only 15 wpm or something like that.

My 2 cents -- > W0CBF

Because it started in amateur NG's & you moved it, so I am putting
it back where it rightly belongs.

Well given that the majority of newsgroups that you have posted to (using another persons amateur radio callsign) have been amateur radio orientated sites I think that it is very relevant. There is of course no requirement for people to use their ham radio callsigns (if they have them) on the net, but this still does not change the fact that you are in effect saying that you are that person - i.e. G8ASO. He is saying that he is not happy with you masquerading under his callsign. As most people would see his callsign as being the sender of that post they would think that it was him who had written it and was supporting your site. Stop being silly, change your posting ID and stop trying to pretend that you are him. Hmmm if I were G8ASO then I guess that I might be flattered, after all they say that imitation is the sincerest form of flattery - or words to that effect.

Please take this obviously fascinating but to some of us rather
esoteric debate out of uk.media.radio.archers - we are radio amateurs
in only a virtually obsolete sense of the term.

Follow-ups set.

> for the consequences.

Consequences? Really? So while you and yours have been
teaching "cw",
everyone else on the planet have been rubbing their hands
together
with great anticipation. OVER HAM ALLOCATIONS! What is wrong
with you?
For the last few years all I've heard is whining over all
those new
codeless people... all WHO? The numbers are pathetic... If
we don't get
some REAL numbers soon... there won't BE any frequencies
left. Look around
you. Look at the malls, all those kids with portable
wireless "things" no
matter how bright or gheeky they are... you see anyone with
a code key? Hmm?
They play with digital equipment like we played with the old
tube things.
Meanwhile more and more pressure is put on the band
allocations. Sigh.. oh
for those days when you could get hot with the gap... spark
gap that is...
Oh? those days are gone eh? obsolete you say... well so is
the "amateur radio,
ham, elmer" or what have you. The days of exciting radio
toys are passing...
fast.
You just wait for the coming bio/nano revolution, it won't
be long now. When
that stuff (FRPG's) goes surplus how you going to keep them

down on the Radio
farm then? Say by-by to all or at least most of the current
seriously under used
frequencies we do have. Then what? Reconstruction's?
Reenactments? Radio models?
I hope you know what the exhibit will say... "CW, the end of
radio as we knew it".

Remember the Dinosaurs.
and,
the "Hams".
Both good examples of the walking dead.

10 WPM RTTY isn't so hard either. But 60 WPM RTTY is of similar
difficulty to copy by ear as 60 WPM Morse. I can recognize RYRYRY
and my call sign in 60 WPM RTTY, but that's about all I can do by
ear with it. I can't even do that with Morse, but that's because I
don't operate much Morse. I do, or did before PSK31 came along,
operate quite a bit of RTTY.

Why would I be embarrassed? It isn't like Jeff is going to call him up and hear "Yup, I dunno the first thing about working on radios." The ham in question made a big name for himself in the Prescott, Arizona area in the late 1980s. I have no idea if he is still there or not, and I really don't much care. I stopped paying attention to him after the mike-jack incident and after I had to make a 120-mile round trip to go turn a serial cable into a null-modem cable because he wasn't able to desolder and resolder two leads in a DB9 connector.

The only one I'm embarrassed for is Jeff. He is so impressed with being an Extra that he thinks all Extras are something special, and is convinced that I can't be telling the truth about this.

About a year and a half ago, the TV station I was working for had an apparent problem with the captioning system. The Vectorscope showed a visual trace of the incoming caption signal, and (while the engineers were starting to tear apart the control room, trying to figure out what was happening) I took a moment to look at it. The signal was a repetitive set -- ABC's version of RYRYRYRY. When I explained it (these guys didn't even know what RTTY was), they contacted the network, who confirmed that they weren't sending text -- they were sending RY<clear>RY<clear>RY<clear>!

Bogart,

If there is a ham radio club anywhere near you,
join it and go along. Meet a few "Elmers" - good
ole boys who've seen and done it all before.
They, in the true ham spirit, will help you out
for sure. You won't be sorry.

Regards & 73 Dave

3658. Yaesu vx5r tone squelch problems

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-30 00:00:00 UTC
From: larry_brown22@hotmail.com
Message-ID: <389468c7.148744172@news.dnai.com>
Source record: 120113

Hello:

I've got a pair of vx5r's that my wife and I use simplex while skiing. Every once in a while, I have troubles with the tone squelch. The radio transmits, but either doesn't transmit the tone, or the other radio doesn't decode it. I can't tell which, because I've never been able to reproduce the problem in the presence of another radio to test with.

I am aware that early vx5r's had a problem with slow decode of tone squelch, and both of mine have been back to the factory for this issue. When things work, I don't seem to have a problem with slow tone squelch opening. When things don't work, the tone squelch simply doesn't open.

Has anybody else experienced something like thist?

Thanks, Larry n6txx

We are working feverishly on stealth antennas for senior quarters. Haven't you seen the glorious new Ventenna advertised in QST. Its a 80-10 meter antenna that looks like the air vent from a plumbing stack. Low SWR...agreed not much of a radiator due to high angle of radiation, but very good for local work.

Then of course we have the remote stations becoming more popular. You control the remote with a UHF signal.

Ya know...us OT's will probably be around HR for a long time...working you all from the beach, sucking up your hard earned Social Security contributions. Don't write us off too quickly.

I have the utmost respect for anyone who can copy 20wpm.
I recently passed 5wpm and with the problems I have with my hearing
I consider myself lucky to do that. 20wpm is an accomplishment and
should never be discounted no matter when it happened.

Trust me, I'm not. At one disaster I worked, there was a little old guy
who had a packet rig mounted on his WALKER. He had plenty of strength
to move it, just reflexes too slow to safely walk unaided.

However, we ALL die. When I got my license (about 20 years ago), the
average age in the ham clubs that I visited (in California) was about
60. I was in my early 20s, and was the youngest one there by easily 40
years.

This is NOT the way to grow a hobby -- and it is sure not the way to
raise up defense of resources which others will eagerly pay the Feds a
lot of money to take over.

You can bet that there is some lobbyist somewhere, gleefully tracking
the SK lists, waiting for just the right numbers to come up before he
pounces on behalf of the company who sponsored that poll.

This was exactly what I was saying...if the hobby doesn't grow from the pool of young people out there, the Feds will reallocate the spectrum when the hamdom critical mass falls off the radar screen. If no code is the future...then no code is the way to go.

I'm hardly at the walker stage and I leave my HT in my desk draw at the office for those times of the day when I can no longer take the work-a-day nonsense. I turn on the HT and get more of the same, but this time from different people.

I dunno, when I was a kid ham radio was magic, Dick Tracy had a wrist radio and that too was magic. I actually remembers kids in P.S. 3 who didn't have phones. The world is changing and I am sure we had better change with it.

I remember a time when a pleasant QSO lasted beyond the signal report...or the funniest tag line I have ever heard..."when last heard you were 5-2, QSL via the buro".

I certainly would have mentioned it if I weren"t sworn to secrecy. I am afraid by alluding to the manually copied RTTY I may have given it away. I apologize.

The4 reason for the RTTY of course stemmed from the lack of capitals and lower case in the Morse Code. This is an enormous weakness given you could not tell where the sentences started...you had trouble describing things such as democrat and Democrat...big difference in meaning. So of course we had to develop a system that could distinguish between the upper and lower case. Eureka, baudot.

Next time around we can discuss analog and digital baudot...but perhaps we can leave that for another night.

Actually I have no inside information...but I have always thought that we had a better chance at spectrum if we had larger numbers. In fact I gave up code after I passed my General...then of course the idiots in Newington pushed for "incentive licensing" and we got smaller segments if we were insufficiently motivated to move to Advance or Amateur Extra. When I was first licensed the amateur spectrum allocation included a segment of frequencies 10000 MHZ and above. Well today we haven't got all that...why, because someone figured out a way to get something to oscillate at those frequencies and suddenly it became commercially feasible. The amateurs lost most of the territory. I am not sure there is a lesson in there but I pass it along as a piece of history.

In any event, I propose eliminating the Morse Code as a requirement and substituting a "psychological test" in its place. The requirement would be a certficate of mental health from an accredited psychologist or a psychiatrist. From what I have been hearing on 80 and 20, those bands would be deseted...until all of us moved in to fill the void.

Actually, there is a company which is was seeking to cut a chunk out of the HF allocations. They figured that the Extra freqs were being underutilized, and they hired a polling company to go to hamfests and club meetings nationwide, including Dayton, a year or two ago. I don't have the actual data, but what I heard (I'm a TV newscritter by profession) was that something like 1/3 of the Extras don't own HF gear, and less that 50% of the remainder work HF "at least once each month."

I dunno about Hawaii, but if it gets right down to it, the Elect in Sodom-on-the-Potomac think that your governor's last name is McGarrett, and they don't much care what anyone thinks in any state where you buy Best Foods.

It worked until 1963. Remember Lafayette Electronics? Knight-Kit? HEATHKIT?! These companies went TU, in large part because the growth of ham radio came to a screeching halt with "Incentive Licensing."

Right now, YOU are on the COMPUTER. A few thousand General, Advanced and Extra operators are on repeaters. Another couple of thousand are on digital radio. There is room for another million hams in the next ten years, if for no better reason than a large percentage of our current hams will go SK due to age, or they will get off HF due to the restrictions in retirement and condo villages.

Samuel Goldstein <sjgold@optonline.net> wrote:
>then of course the idiots in Newington pushed for "incentive licensing"

No, it was the government which did that:

Incentive licensing has been around almost as long as ham radio itself.
The idea of an IL structure was created in 1923. Back then the government
developed the Extra First Class amateur license; to be awarded the ticket
one had to be licensed for at least two years, take a test similar to the
First Class exam of that period, copy 20 wpm, and have a clean record.
Extras were then permitted to operate on a band that those with lessor
grade licenses were forbidden to use. That band (200-220 meters) had
originally been open to all hams.

Moreover, in 1959, the FCC asked hams, via a Notice of Inquiry, what
incentives could be tacked on to the Extra Class license.

It was the FCC which first suggested incentive licensing, not the ARRL.

>first licensed the amateur spectrum allocation included a segment of

>it along as a piece of history.

And the slow- and no-code technician licenses didn't do anything to
protect that spectrum. Maybe we should have offered free pizzas to
folks to get more interested in applying for those tickets.

>In any event, I propose eliminating the Morse Code as a requirement and

No problems on 80m -- the CW folks are very well behaved; you probably
mean 75m phone. Since all the riff-raff utilizes phone, maybe we should
ban that mode.

A callsign is assigned to a station and not a person, if amateur radio station G8ASO was established, then anyone using it must give the same call-sign irrespective of whether they have a call-sign of their "own".

As this is conducted over telephone lines, amateur radio call-signs are irrelevant! This is not an amateur radio station!

Regarding Sunday's ruckus on 14.275 about which Polly pleaded complete innocence, let's do some arithmetic. Polly and Billy Jack were on 14.313 and supposedly were jammed.Now Polly's been saying how happy he's been that a certain faction broke away from .313 in favor of .275 which theoretically was a peace promoter. If you'll check the archives, several weeks ago I posted a message saying that in the not too distant future Polly would invade 14.275 and wreck the armistice. Getting back to Sunday's debacle, I heard Polly tell Billy Jack on 14.313, "Let's go to .275." Now let's count. How many kHz are there between 14.313 and 13.275? Right-38.Why then didn't Polly suggest a move DOWN one by one to the first clear frequency if his motive was to talk to W4LLI? Why did he jump 38 kHz? Because he was LOOKING FOR AN ARGUMENT. K0ECK's assessment was right on target. Polly's move was premeditated and designed to create problems. He'll never change and hopefully Riley will FINALLY understand what's going on with W4FQF and take appropriate measures once and for all.

I just went to see if I could access my old mailbox and couldn't but was extended this invitation to re-up. The thing is that MindSpring is doing a nice job and even though I harbor no real resentment against AOL aside from the connection and knocked offline problems, methinks I'll stay put. I swear that MindSpring allows access to over 26,000 newsgroups plus over 1000 from Microsoft's news server. I only wish I could copy and paste them here but cannot. It'd blow your minds providing that anyone on this board has one except for me and the Goodfellows. We are all geniuses!

The Kenwood TS870 manual used to be available for download at their site.
The control codes for that rig are in the manual. I don't know if they are
the same as your rig however...

The trouble is these damn connectors keep getting
smaller while I keep getting older. I'd just as soon
NOT have to solder DB9 connectors at all unless it
was an emergency repair.

More to the point, the
ability to solder is not at all an indication of technical
competency anyway.

It would seem that Angelfire prefers to protect a known felon! The web site is no longer. Angelfire will censor the truth. James V. Obrien III is a convicted felon. The felony got him thrown out of the U.S. Navy after 14 years. There is photographic proof that this guy lives like a pig. Yet he wants to point his finger at innocent people. There was a road rage murder on I-75 the morning of the 28th. This guy has been heard on 2-meters as well as 75-meters saying ,"I have killed before and I will kill again!" He has been known to pick fights with people who have handicaps. I just want all to know the facts about this loser. He starts fights then when he gets hit back he cries "foul." What a big baby. The facts about this dangerous person are in web form. You can see the facts at

> question a chance to defend himself.

Okay, so to your worldview, it is better for me to identify an incompent
to the world so that he can defend himself (and just how would he do
that?). Unique.

> >The ham in question made a big name for himself in the Prescott, Arizona

Two guys were sitting on a park bench. One turned to the other and
asked, "Are you a Liberal or a Conservative?"

"I'm a Conservative," the other man proudly replied.

"Why are you a Conservative?" the first man asked.

"Because my father was a Conservative, and so were my grandfather, my
great grandfather, and his father before him," replied the other man.

"What if your father was a jackass, and so were your grandfather, your
great grandfather, and his father before him?" persisted the first
man. "What would you be then?"

The first man thought for a moment, then replied, "A Liberal."

>but what I heard

Hearsay...

>was that something like 1/3 of the Extras don't own HF gear,
>and less that 50% of the remainder work HF "at least once each month."

Something's quite odd about those "figures." I know of no amateurs who
go to club meetings, Dayton, or hamfests who aren't also very active
on the air.

You can't name the company, you can't state what their interests in HF
were, you can't name the polling company, you can't provide the actual
results of the ineptly conducted poll (a mail survey of as many Extras
as feasible would have yielded the most accurate results). It's all
fantasy.

>I dunno about Hawaii, but if it gets right down to it, the Elect in
>Sodom-on-the-Potomac think that your governor's last name is McGarrett,

Making up more stuff again. *Every* time the President flies across the Pacific to meet with other heads of state, he stops here for a round of golf with our governor. Some of his stopovers last just a half-day in order for them to play golf. This state (sadly) is heavily Democratic, thus, our governor has the President's ear. I won't begin to talk about about the Defense Department's interest and presence in Hawaii.

>It worked until 1963.

Millions flocked to HF in '63??

>Remember Lafayette Electronics? Knight-Kit?
>HEATHKIT?! These companies went TU, in large part because the growth of
>ham radio came to a screeching halt with "Incentive Licensing."

Your statement above doesn't at all support your claim that millions
flocked to HF in '63. And don't forget the importation of JA-made
gear beginning around that era helped to kill those fine companies.

>> Let's crunch some numbers: Our M/HF spectrum consists of 3.75 MHz,
>> with say, only half of it, 1875 kHz, useful for communication at
>> any one particular time of the day. If suddenly, as if by magic,
>> all current licensees were granted M/HF privileges, we could possibly
>> have 670,000 have attempting to fill that 1.875 MHz. Okay, I'll grant
>> you that folks have to work and sleep, so let's say at any one time,
>> we have one-fourth of all 670 kilohams on the air, with two per QSO.
>> That would mean each QSO would be separated by just 22 Hz. =:o
>>
>> Okay, let's pretend that all 3.75 MHz is available all the time,
>> with say, one-tenth of all operators on at any one time: Now
>> each two-person QSO is separated by 112 Hz.

>>
>> Worried that I didn't take into account frequency re-use? Suppose
>> we could manage three simultaneous QSOs on a single frequency;
>> each such grouping would be separated by 336 Hz.
>>
>> That's with our current 670 kilohams. And you desire "millions"?

>Right now, YOU are on the COMPUTER.

With the HF rig tuned to 30m.

>A few thousand General, Advanced
>and Extra operators are on repeaters. Another couple of thousand are on
>digital radio.

Tune across the bands right now -- jammed -- wall to wall signals.

>There is room for another million hams in the next ten years,

Ah, now you've reduced your number to *one* million over ten years. But
it's much more desirable to attract quality operators than quantity;
our 3.75 megahertz of M/HF spectrum jammed with 14.313MHz-type QSOs
will endanger it more than lack of numbers.

Jeff, as ususl, before you place any credence in anything that Cecil the Great Obfuscator offers you might want to check into it a little further just to be sure he isn't changing the whole story to suit his Class Envy again. I mentioned that in looking through all the electrical and electronic engineering books I have, and even in Walt Maxwell;s antenna book "Reflections", not once was I able to find the term "common mode currents". So he has converted that to me insisting that there was an engineers conspiracy to withold it from everyone else.

What did you expect from him? Hell, he's the old Truth Teller who swore on a stack of bibles that he would NEVER go for an extra class license, no matter what. So look at him now, memorizing with the best of them. After all, he went to engineering school to learn how to build power lines, not radios.

I've been trying to use a program "BeaconSee" with my Kenwood 850, but apparently it doesn't have the correct command sequences to tune the rig under control of the PC.

To make a long story short, does anyone out there have the list of Kenwood control commands that may be sent from the PC to the rig (via the RS232 interface)? I can't seem to find it in any of my Kenwood manuals.

Any/all help is greatly appreciated.

Actually, "common mode currents" are not understood/known by most engineers.
Heck, I had never heard of it, until a couple of years ago and I've been
working
with hardware engineers for 20 years (as R&D tech, then Software Engineer)

Since having an Advanced license will be a rarity after April, doubt Cecil
is studying for the Extra.

Roger, You seem angry. Try to settle down and post with some intelligence for once.

All I can say is you got a letter from Hollingsworth telling you to stop jamming 20 meters. You got that letter after myself and others figured out you were jamming. We self policed the ham band. You got caught and now you are pissed off at me for catching you. I was in your area and caught you jamming and you got a letter from the FCC
You jammed and I reported you and now you are angry at me. Sorry but I will report you again if you jam again. I will make sure you are off the air if you do it again.
You can threaten me all you want. You can call the police all you want...But if I catch you jamming again, you are history.

No MORE KC8JBO. NO MORE INVERTED V AT 40 FEET and I'll know where to get a real cheap Yeasu FT 920.

>I guess you go down there to molest the children in Florida during the
>winter.
>

Typical childish behavior..just stick to the facts that you got caught after I was in your area. You better make the connection that I was there, then you got a letter from Hollingsworth. See The Rain Report under letters. Tough luck jammer.

Poor child molester TONDUHHHHHHHHHHHHHHHHHHHHHH...
Here's the letter:

November 9, 1999

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Roger L. Wiseman
<@@@@@@@@@@@@@@@@>
<#################>

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been deliberately
and maliciously interfering with the radio operations of other licensed
Amateurs on the 14 MHz Amateur band. This interference has occurred at
various times in the last several months and includes broadcasting
music and other unidentified transmissions.

The Commission generally relies upon the Amateur Radio Service to be
self-policing. Operation of the type described above is contrary to the
basis and purpose of Amateur Radio and degrades the service for
legitimate users. This serves as a Warning Notice that such operation
will not be tolerated. Additional incidents of operation of the type
described above will result in a monetary fine being levied against you
and in revocation proceedings before an Administrative Law Judge.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service
Enforcement Bureau

No mention of YOU and your perverted uncle. Anywhere. You have lamely
tried to overstate your importance on the newsgroup.
It's awfully funny Riley didn't respond to my phone calls, e-mails and
written apology. I guess that shows how much credence you have,
bucktoothed chipmunk.
I've already let Riley know about your little agenda. Poor baby. Now
he's seen the reports filed on you, stalker.

Howdy everyone!
I'm going ot visit Roger Wiseman this weekend-----I'm bringing a
digital
camera---so everyone can see the infamous KC8JBO. Cut the grass Roger---
clean
up the house-------I'm coming to visit and report to the world who in
the hell
is Roger Wiseman.......... It should be fun........to actually see the
man
behind the postings-------isn't the Internet great!!!!
You've wondered who in the hell is Roger Wiseman---KC8JBO---well
now
you'll know!!!!!! Info on the Website to see Roger Wiseman will be
upcomming
in a post real soon. See you all then!!!!!!!!!!

Sounds Great Wendy.
I built my own earth bermed home. It's 1200 sq. feet with earth bermed on 3
sides and has massive south facing windows for passive solar gain.When the sun
shines in the winter, I have to open up the windows to cool the house down. In
the Summer, I need no air conditioning--I just run a small de-humidifier to dry
out the air. I did all the work myself and the house was built with no mortage
and it is free & clear except for the tax man.
I'm using a composting toilet and have solar pannels and a small windmill
for 12 volt power. I have 3 lighting systems---12 volt halogen lights, 120
volt incadecent, and keroscene lamps. The well utilizes a hand pump to a
cistern. From the cistern, I run a 12 volt pump to a pressurized tank. That way
I can allways have water no matter if the power goes off or not.
The refrigeration is handled by a ice house and inside the house I utilize a
12 volt boat fridge. I've built underground a super insulated root cellar that
holds several 5 gallon containers of water that I freeze in the winter by
setting them outside. After freezing, I put them into the ice house/root cellar
and they stay frozen till the fall season.
Heating is handled by wood stove, passive solar gain and I also have 240 volt
baseboard heat and finaly, a small propane ventless gas heater.
Ive got other plans for solar water heating--right now I'm using a
tankless Aquastar heater and it works great.

I love my house--no heating bills--no water bills, low taxes and low
upkeep.
Steve from Bunker Hill in southeastern Ohio.

Don't cloak yourself in fake mystery.

What are the implications?

They are:

ONE single message, EIGHT newsgroup flags attached to it.

I don't assume, these are unspeakable implications. Or did you really
believe, that a message posted to eight newsgroups criss crosses the
internet as EIGHT individual messages, consuming eight times the
bandwidth? The designers of internet had more brains than that.
Though you can read the message in eight groups, it only exists ONCE.

Hey James,

If I want to save my valuable SOLE, I will purchase good sturdy boots
and warm socks.

As far as my SOUL goes, I got that all covered too, and the LORD has
revealed to me that you whacko's don't know squat. But keep a sharp
lookout for those black helicopters anyhow.

And that's the way it is!

73,
Walter

Legos could replace pencil and paper college entrance exams

ZCZC
CALLING ALL SHIPS AT SEA
HEAR YE HEAR YE
ARRL HIGHLY OFFICIAL SOUNDING BULLETIN FOLLOWS
ARLXTRASPECIALB001
READITANDWEEP

February 1, 2000
Web posted at: 10:27 AM EST (1527 GMT)

COLORADO SPRINGS, Colorado (AP) -- Standard
pencil-and-paper college-admissions exams don't reveal talents
like initiative, teamwork and leadership, so select teen-agers are
going to get an alternative test -- which includes making a robot
out of Legos.

Colorado College is joining with eight other schools around the
nation in an experiment aimed at recruiting diverse students
who otherwise might not win admission.

"This puts more emphasis on hard-to-measure characteristics
and less on the standardized tests that frankly have been a
stumbling block for disadvantaged and minority students," said
Terry Swenson, admissions dean for Colorado College, which
has 1,900 students.

<sounds like the FCC wrote that part>

Other colleges participating are four private liberal arts colleges
-- Beloit, Carleton, Grinnell and Macalester and four state
universities -- Penn State, Rutgers, Delaware and Michigan.

The Lego test is one of a dozen workshop activities aimed at
replacing pencil and paper exams.

Groups of eight to 10 students are given a box full of Lego
pieces and told that they have 10 minutes to build a robot
exactly like one sitting on a table in an adjacent room.

Each group member is allowed to look at the robot, one at a
time without taking notes. Evaluators then grade members of
the group as they snap together their version of the robot.

"It's easy to latch onto the Legos, but this is not selecting
students by their ability to use Lego blocks," Swenson said.

"The Legos are a mechanism to force students to interact and
see which ones emerge as leaders."

Other workshop activities include public speaking,
conflict-resolution drills and personal interviews.

I just got through wading through all the restructuring comments.--I think I have probably been around many years longer than most of you abd I can make a few observations. The FCC has acted--it did not listen to ARRL, Fred Maia, or many others--it did listen to QCWA. But no matter, it is over and it is what we have to live with--and the guy that was complaining about dems and repubs--that is inane--national politics has very little to o with amateujr radio--I should know because I spent a great deal of time in Washington. (DC) dealing with the bandits down there. The only time the pols are going to get into the act is when your neihbor has TVI--then we have troubles

3755. Weather Station RFI

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-01 00:00:00 UTC
From: clayj@nwlink.com
Message-ID: <877ldq$5lc$1@nnrp1.deja.com>
Source record: 119951

Whew - this is my first time in this forum for a while. Now I remember why I stopped visiting. The Noise-to-Signal ratio is worse than ever!

Gee folks; how is this going to look to all of the potential new Hams out there - no matter what we think of each other, or restructuring, or all of the other off-topic garbage I saw; if the number of hams declines far enough, the FCC will decide we're not worth the effort and start taking away bands!

Let's all clean it up!
<We now return you to your regularly scheduled forum>
The real reason I'm posting here is to see if anyone else has a Davis Weather Station and is having RFI problems. Specifically, I've got a problem with a Davis Weather Monitor II and my ICOM 756. The 756 appears (based on other devices around my home, including computers, modems, a security system, TVs, AM/FM radios and even a wireless phone) to be "clean", but when I transmit (even at fairly low power, like 50W); the temperature readings on the weather station (just temp, not Humidity, Pressure or Wind) get "trashed" (go to all 1).

So far, the only "help" Davis was able to come up with was "move one of the two devices".

Anyone else have this or a similar problem?

Please reply via email, and, if I get enough interesting replies, I'll post a summary.

Thanks!

Clay Jackson

Excuse me...it's not "whacking off" as you so eloquently put it. It's called doing research for the book I'm writing called "What to do with Tropical Blend in one hand and a Beer in the other while on-line"

...and if it's done often enough, it gets to be kind of regular.

Yet, you can't pull up one single article of mine which "supports" jammers
or jamming activity.

Always keep a copy of the "Associated Press Stylebook and Libel Manual"
next to your keyboard so as to prevent getting yourself in trouble.

>be issued to people who choose one, and several hundreds more that
>are in the process of their 2 year wait period before they can be
>re-issued.
>There are plenty for the taking.

Really? Let's do some arithmetic: For K, N, and W 1x2 prefixes for
the ten call areas, there are 20,280 combinations of possible
callsigns. For the A, K, N, and W 2x1 prefixes for the 13
call areas, there are 23,400 combinations of possible callsigns.
Hence, by my rough estimate, there are about 43,680 combinations.

You say there are "hundreds" of Extra calls currently available;
many of those "hundreds" are going to be gobbled up as folks rush
to attain a pre-April Extra Class license. I'll be generous and
grant you that 1000 Extra calls will still be available come
April. That's a bit under 2.3% of all possible Extra calls. 2.3%

As I said, they're almost all gone.

3764. What say, "Rileygotcha?"

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-01 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8786bo$ae9$1@nntp5.atl.mindspring.net>
Source record: 119960

Now let's see. "Rileygotcha" write
this.....

From what I have heard, AOL told AF2Y that the law suit inviting posts
that he was putting on news groups was reason enough to pull the switch
on his antics. It was reported that two very influential stockholders
complained about his "Libel Act" to the powers that be at AOL.

Good work boys. Iris is punishing him with whips as she is mad about
the floor falling out from under her weird "HUBBY".(but he likes
that)!!

Rileygotcha

Sent via Deja.com http://www.deja.com/
Before you buy.

and I posted this message from AOL

I just went to see if I could access my old mailbox and couldn't but was
extended this invitation to re-up. The thing is that MindSpring is doing a
nice job and even though I harbor no real resentment against AOL aside from
the connection and knocked offline problems, methinks I'll stay put. I swear
that MindSpring allows access to over 26,000 newsgroups plus over 1000 from
Microsoft's news server. I only wish I could copy and paste them here but
cannot. It'd blow your minds providing that anyone on this board has one
except for me and the Goodfellows. We are all geniuses!

Hi Ed,
Thank you for the above comments...A very good response Ed! There
is a sure resonance between our thoughts and I think that both of us
are aware of some of the advances of technology to a level where we can
begin to understand the limitations of many who used to be considered
as ham experts...as well as our own limitations. All of your points
above are well taken. There is just one point that I want to emphasize
and that is there are ham specialist experts who are not ARRL members
or ARRL appointees of any kind. Technological experts are
unfortunately not always U.S.citizens or ARRL members or members of any
specific sex, race, or ethnic group. There are Hams throughout the
world and scientific geniuses as well as idiots throughout the world.
There are corporations, universities and governments that promote
technological progress. The worlds of science and technology are not
dependent of the ARRL or any one organization. If the ARRL would cease
to exist Ham Communications Techniques would continue to advance, IMHO

maybe even more so...because it would cease to be tethered by Ham politicians who have limited foresight.
Personally I would like to see the kind of innovation made by ARRL members as has been made by JARL members in recent years. What, if anything, do you think the ARRL could do to make this happen? Maybe more incentive HAM licensing might help?????

Hams need MORE license classes.
Keep radiation resistance in antennas.....not in neighbors.

73,
Bob Wex w2ilp (Incentive License Policy?)
ARRL Member IEEE Life Member

If we value the pursuit of knowledge, we must be free to follow wherever that search will lead us. The free mind is no barking dog to be tethered on a ten-foot chain.
--Adlat E. Stevenson Jr. (1952)--

You tell me whar a man gits his corn pone, en I'll tell you what his 'pinions is.
--Mark Twain (1925)--

Many hams could care less about what is in their ham gear or where it was made. Most Americans don't know that Coca Cola isn't "classic" because it has been made with corn syrup (and not with cane sugar) since WW2...nor do they know that the U.S. government has been supporting the corn lobby since the Whisky Rebellion.
I dunno if that is good or bad...or if corny politics is off-topic here.
--w2ilp--

3769. Re G8ASO?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-01 00:00:00 UTC
From: G8ASO* <g8aso@coolmail.com>
Message-ID: <8757v4$1nge$1@dolf.netfront.net>
Source record: 119999
Cross-posted to: alabama.birmingham.radio.amateur,aus.radio.amateur.misc,es.rec.radio.amateur,nl.radio.amateur,rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.policy,tnn.radio.amateur,uk.media.radio.archers,uk.radio.amateur

A callsign is assigned to a station and NOT a person, if amateur radio station G8ASO was established, then anyone using it must give the same call-sign irrespective of whether they have a call-sign of their "own" or not. Many people seem to forget this licence requirement, how often have you heard "I have G1XYU here with me"
Bollocks!
G1XYU is NOT there!, and if that call-sign were to be used the original station would have to close - log book entries filled in, and then a contact re-established as the station is identified by the new call-sign. If the original operator was then to speak, he would be legally required to identify himself [his station] as G1XYU, not G8ASO, until such time as G1XYU closed down. Actually, it would be G1XYU/M as this would not be established at the main station address for the G1XYU license.

Easy if you read the BR68!

As this news-group lark is conducted over telephone lines, amateur radio call-signs are irrelevant! This is not an amateur radio station! This is not amateur radio, and G8ASO said that, stroke M, of course!

Kenwood used to supply the command set with the chip set, not the rig itself. I can't help you as my files stopped with the TS-940 and R-5000. The basic command set hasn't changed, but each model added or subtracted data strings to the basic set. Have you asked Kenwood for the datasheet?

This is what makes the FCC action so worrisome. N8WGM stalks a
ham, then sends letters to the FCC of alleged jamming; the FCC
believes WGM, and sends the ham a warning letter.

I hope the accused forwarded the above threat-to-stalk notice
to the FCC.

Wow! Sounds like a great house to me.
I lived throught the ice storm up in Quebec a few years ago. I wish I had a house like that so I wouldn't have froze my butt off. No power for a month and a half in the worst time of the year to not have power. The Winter.
More people should think this way and become more self reliant. It would make their lives a lot easier in case of emergencies like an ice storm or a tornado which sure does make for a bad day.
He says he has no heating/electric bills and no house payment. I sure wish I could have done that!

I find it very troubling that you in the past have supported known jammers.....AF2Y, KC8JBO, OTK etc.. These jammers have been either removed or warned not to engage in their illegal activities again.
The evidence gathered was presented to the FCC via letters and recordings. You can guess at the implications as much as you like. The letter I'm sure was not based soley on the obersvations of "civilians". I'm sure the FCC had made observations on their own after being made aware of the activites of this "JAMMER" by those "civilians" who knew this guy was jamming.

Very Troubling that anyone who is a ham
thinks that the FCC should not take into concideration the observations of other hams in the quest to clean up the bands.
JBO jammed and he was caught.

Exactly. The FCC didn't mention any specific incidents, as you can see
from the post with my warning letter.
TONDUHH the blunder chipmunk overstates his influence upon the FCC.
He's a legend in his own little tiny mind.
I thought he was going to Florida, and didn't have time for this.
Another lie out of n8whitegaymale........
Or is it because he can't scrape up enough gas money?

3785. Morse exercises No.8

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-01 00:00:00 UTC
From: DTC <dtc@muenster.de>
Message-ID: <875trs$2np$1@news.citykom.de>
Source record: 120015
Cross-posted to: alabama.birmingham.radio.amateur,nl.radio.amateur,rec.radio.amateur.misc,uk.radio.amateur

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr8_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr8_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr8_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

Source record: 120016

>This is what makes the FCC action so worrisome. N8WGM stalks a
>ham, then sends letters to the FCC of alleged jamming; the FCC
>believes WGM, and sends the ham a warning letter.
>

Your postings indicate a predispostion for support of jammers and jamming, especialy this rather acerbic jammer . You've supported some of the biggest jammers in ham radio with your comments on this NG. You have no credability. No stalking took place. I drove by his house and asked him to come out. He asked me to kiss his ass and then I left. End of story. Self policing worked . . Roger got caught.

If anything, KJC8JBo is a stalker. A thousand postings and attacks on several others on this newsgroup. I've ignored his attacks but every once in a while I'll respond.
KC8 JBO was jamming and he got caught. You people are angry that your buddy was caught by hams who knew what you were up to. Too damn bad. Your rather violent reactions to my visit was more than enough evidence to show that something illegal was going on. A few weeks later after my visit---Roger got his letter.

Criminal Jammers will be paranoid and try to keep people from finding out who they are.They will scream anything to prevent people from finding out who they are including "stalker--stalker".
Everyone on this newsgroup knows that JBO is an antisocial jammer. His over 1000 antisocial hate filled postings in the last year would be evidence enough. Read them and weep.
> N8WGM stalks a
>ham,

You've made this statement several times.

You are right.
In Webster's collegiate dictionary, The word stalk means " in search of prey or quarry"
Jammers are the quarry. KC8JBO is a jammer. He got caught. I sent no letter to the FCC but made several comments on the air on 3950 about KC8JBO. What Roger didn't figure was that someone lives close by and who won't put up with his crap on the air. .

KC8JBO likes anonymity. All criminals do.
So he screams "stalker" or " he wants to photograph me to masturbate to". What kind of sick wacko is this? I wanted to put him on the web so people could see what kind of bully this guy is. He has room to make all kinds of insulting remarks to everyone. All the while he lives in a shoe box with his mommy. He's nothing more than a schoolyard bully who hasn't learned he's no longer in

school. OOPS--I guess he still is after 45 years.
Hollingsworth was monitoring 3950 because of the activities that were sanctioned by several of the 14.313 participants. He probably heard my comments about positive identification of jamming signals made by my uncle in the area. Too bad. You people can cry all you want. But Roger has a warning letter. If it happens again, He's history.

3787. Re: Kenwood TM-221A Step rate

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-01 00:00:00 UTC
From: The NeXus <nexus@datasync.com>
Message-ID: <8768mr$p0r$3@news.datasync.com>
Source record: 120017

Brad Sheppard <bradjenn@nf.sympatico.ca> hath said:
: Hi I just acquired an old Kenwood TM221A mobile radio and am wondering how
: to chage the step rate of the VFO. It is currently set at 20KHz and I have
: a load of repeaters in this area that require a 10 KHz step rate (i.e.
: 146.790 as opposed to either 146.780 or 146.800 which are the only two
: frequencies even close to the desired one available)

: Thanks in advance
: Brad Sheppard
: VO1XA

I haven't used this rig in awhile, mine is boxed up on a shelf.
Even though I can't answer right away, I would like to suggest
that you can obtain a copy of the owners manual from Kenwood's
online site free of charge. All you need is Adobe Acrobat to
read the .PDF file. Go to ftp.kenwood.net and you should see
folders there on for Amateur in there you should see a folder
for manuals etc. just select the one for the TM-221A. Ofcourse
if you print it out, it will be exactly like an original manual.
Jimmy

Message-ID: <87688i$p0r$2@news.datasync.com>
Source record: 120018

Jeffrey Herman <jeffreyh@hawaii.edu> hath said:
:>How do we tell them apart :p

: Oh, I suppose that we could scan our licenses onto some web page.
: The 1x2 and 2x1 callsigns are almost all gone so when you see or hear
: one, you can be assured that it belongs to a 20 wpm Extra.
: 73, Jeff KH6O

Jeff I see you haven't been to the Vanity Callsign page at either
QRZ or ARRL. There are hundreds of 1x2 and 2x1 callsigns ready to
be issued to people who choose one, and several hundreds more that
are in the process of their 2 year wait period before they can be
re-issued. When I get upgraded I'm either going for a 1x2 or a 2x1
or a 2x2, if I can find something witty that matches 2x2 I'll go
for it. I'd get a 1x2 or 2x1 to shorten up the time it takes to say
a callsign. Right now I have a tongue-twister, its almost impossible
to understand without phonetics, KB5FSV.. Check out www.qrz.com under
vanity callsigns. There are plenty for the taking.

Howdy, folks.

New site! http://cw.hfradio.org - CW / Morse Code Resrouce center. Lots of stuff coming down the line. If you have stories, tips, links, and other things, would you share them with me, and allow me to post them on this new resource?

Also, if you are into HF, consider getting onto 10 meters! It is hot right now. Lots of DX. The Ten Ten International club is challenging Amateurs to work 2000 contacts on 10 meters, any mode, any 10 meter frequency, in the year 2000. I've posted my current 10 meter logs on the site. See if you are in there (if ya worked me!).

As usual, you are also invited to visit http://hfradio.org - a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

Well, maybe that's right, and then maybe not. Soldering is a skill of dexterity and timing, but also a result of proper instruction in technique. Lacking such skill, one may still understand all sorts of things, and be able to explain, repair, adjust, operate, modify, and even design the kitchen sink etc. It's just that soldering is so *basic* a skill for a ham, and so easy to learn and do competently well, that barring arthritis and astigmatism it is hard to understand why a ham can't do it, or how he *can* be competent in performing more complex tasks, like using an oscilloscope, setting up a field day station, or building and installing common antennas.

Which is exactly the argument being made, but as inverse: the skill is simple and common and undemanding. However, given that soldering is a staple (no pun intended) activity of amateurs who are more than purely appliance operators, lacking minimal competence in it raises questions about other basic skills, higher order skills, and the quality and extent of the self-training we are supposed to be engaged in.

Good proof of the axiom that both are bankrupt, corrupt ideologies that have everything to do with imposing oneself on others, and nothing to do with morality, truth, or efficacy. Both of them stink.

Not only that, but if you are using a news reader much more modern than
TIN, reading a message in one group should mark it as read in the others
as well, so you don't see it twice, unless you want to torture yourself
with everything that everyone else is doing wrong.

Enough already with picking on Donald Anderson. You say he hates elderly perople? Bullbleep. He's the most polite guy on 20 meters; we can all learn from him. You don't like what he says about Viet Nam? That's too bad; he was THERE, evaded no draft whatsoever and I don't care in what capacity he served. HE WAS THERE!. How much proof do you need that we should have never gotten involved? Robert McNamara said it was unnecessary; in fact, there never was a Gulf of Tonkin incident. That was fabricated by L.B.J. and pals. Listen to W4NTI's analysis of that S.E.Asian murder factory. According to him it was a war that greatly profited Lady Bird and her darling starlings. I don't agree with W4JYZ's admiration for Jane Fonda; I think she was treacherous but by God, Donald has a right to express himself because HE WAS THERE! It's very easy to talk about patriotism and fight a war from one's living room, isn't it. Was I there? No because at the time of the big callups, I was close to thirty but I did my part by voting for Goldwater in '64 since the Reds were scared of him big time and Barry would have stopped that slaughterhouse fast. And t I attended to some who served and saw first hand what had happened to our proud youth and dammit-we should have either nuked the beasts or kept out. Give W4JYZ a break because HE WAS THERE and has keen insight into politics.

I can answer that. Except for Maxwell (about whose life I know next to nothing), these guys all had workshops and were quite competent technicians. Soldering and other contruction skills are pretty much prerequisites for inventors and experimenters. How else do you test an hypothesis, save by putting a circuit together and running it? Can you imagine how important a good solder joint is in prototyping an *entirely* novel circuit, like the Audion or product detector? Maybe it works, maybe it doesn't, but be very sure that if it *doesn't* that you have failed at the drafting table, not on the workbench, or else you are liable to discard a good working design!

Especially early on, most electronic pioneers had neither the funds nor the confidence of the science and engineering establishment to have a lab full of technical assistants. Morse himself was a notable exception. He had a little money of his own, and was able to persuade his brother to grant him even more to finish his early work. But what impeded Morse more than anything wasn't finances or scientific opinion, but his own ego, upper-class aversion to manual labor, and stubborness. He did little of the drab dirty lab work himself, but got Alfred Vail to do it.

With his hands on the actual telegraph apparatus itself, it was Vail who first recognized the problems with the initial inked-tape system, and it was Vail and an assistant who recognized the superiority of using an electro-mechanical sounder to the original system. It was Vail who developed that apparatus, though it was Morse who took the credit for it. Vail knew and used the original Morse code more than Morse himself did. As a result, Vail came up with a number of great improvements and changes to the code, which Morse fought. It was only after a series of public failures than Morse allowed the changes, in the apparatus and the code itself, to be made. Morse built little, and operated little more, and as a result he had a hard time selling the telegraph and telegraph code to Congress and others, since he really knew little about the system, being responsible mostly for the original concept of an electrical telegraph, not for the actual engineering and development. "What hath Alfred wrought?" might have been a more appropriate first message.

Even the most brilliant theorist and inventor needs to get his hands dirty in the workshop. The history of science is full of examples of men of modest background succeeding fabulously, because they spent time building, operating, and using their creations, where other men with sterling stature and credentials failed utterly: Moveable type, longitude, heredity, avaiation, to name a few subjects. Yes, soldering isn't a very high-order or virtuoso skill, but without it and other manual workshop skills, it is hard to invent and develop new things.

Keith,

Do you know any more details? There is a thread on the CW/QTH listserv right now about blind hams and homebrewing/tuning up tube finals. I would especially be interested in how blind hams solder, and then check their joints. I imagine you can pretty easily rig up a DMM and other test equipment to voice-annunciate readings, but I wonder how you avoid burns and ensure solder gets in the right places and the right amounts, and how you avoid bridges and cold joints. A HW-101 is one thing, but how in the world do the blind work on PC boards?

This subject seems to have gotten W4JYZ in trouble with some of his "pears." My spin on the subject is that ham radio has gone to the grayhairs and graybeards and restructuring came about to try to turn it around. And when something is left up to the "greys". invariably it'll die sooner than one wants because so do the "greys," What's killing ham radio? Hell that's easy-the Internet and NOTHING'S GOING TO STOP IT. This whole restructuring bit is a shtick that has two sides. It will bring in some youth which is what we want but what kind? LAZY YOUTH! The one's wanting something for nothing and THAT'S SUPPOSED TO SAVE HAM RADIO? Like hell it will. Internet games and chatrooms are "doing in" amateur radio and it's going to get worse for us. Do you know what made AOL a zillion bucks? THEIR CHATS! The server is an Internet within an Internet and as a self cancelled subscriber, after ten months I know how it works. AOL is so big, bold and interesting that , for example, a young subscriber NEVER has to use it as the door to open the big bold WORLDWIDE Internet. Kids just wanna have fun and there it is. Hell, it's even easier than CB and mark my words, that too will go the way of the grey crowd. Somehow are we going to stem the tide of events that bode ill for the longevity of ham radio? WE CAN'T. Nothing is as powerful as an idea whose time has come and PCs and MACs are both the culprits and saviours. So get used to things all of you who desperately want to turn the tide of history around and set the clock back to "Alice in QSO Land." It ain't gonna happen. Don doesn't hate old people. What bothers him is that the oldies now dominate ham radio and will until they die and what's coming up in the rear will NOT supplant them. Live with it-IT'S REALITY.

I remember these sort of comments when I got on the air. I was the youngblood and there were "nothing but old timer's on the radio". I had no problem with that, I asked the questions, I got the answers and I eventually found my "niche" in ham radio.

The internet has not taken away the young blood. Society has. It is no longer so exciting to talk to strange sounding places in a far away land. When you can pick up a cell phone and do the same. When you can watch your planet from space. etc. etc.

Sure the internet is quick and easy. The real problem is our youth have no challanges. It starts in school, with the touchy feely crap being taught to the parents with no time for the kids because they are busting their butts with two or three jobs just to stay alive.

And last but not least it comes down to us "old timers". You know the ones that can't be bothered by a new ham's question. The one's that sit on 2 meter repeaters and bad mouth the youngsters that came up via the no code tech route. The ones that sit on this newsgroup and call them "welfare generals", etc.

So ladies and gentlemen if you want some youngsters in this service, get your butt out there and bring them to the shack. Show them the fun and thrill of talking thousands of miles on a piece of wire. I did just that last night, with my 6 year old grandson. He is coming back today for another taste. End of story.

Dan/W4NTI

For all his breast beating and swagger on this forum, the fact remains that AF2Y is still off AOL. Iris is pissed at him for his obnoxous behavior that caused him to dump her address book and then be kicked off her favorite ISP! Now he brags about getting a free posting on AOL. It is obvious he does not understand the internet and how it works.

His zany spelling, (example) pears for peers, in a recent posting is causeing people to think he is going to a new level of mashugana (crazy). It is very sad, but he made his bed, he will have to lay in it. HO HO HO HEE HEE.

>than anything the military had. Marconi had BUILT some of the military
>stuff. I would hazard a guess they they were pretty good with a
>soldering iron.

I would be very interested in viewing photos of equipment Art Collins
assembled *himself* for the military. Please provide a URL.

I've seen photos of early Marconi gear; he did not solder wire joints.
Metal clips were used to join wires together. Equipment build on a
wooden "chassis" utilized wood screws to join wires together.

Early books on wireless (published within the first decade of the
1900s) contain no chapters on soldering techniques; clips are
shown at wire joints. "The Book of Wireless" by Fred Collins (1915)
shows how to assemble a station from scratch -- again, no mention of
soldering is made -- wire clips wood screws are used throughout assembly.

Your error lies in the belief that the joining of components has always
meant utilizing solder.

Quiz: Can you state the date when soldering was first applied
electronic assembly?

You're making the same mistake Keith makes: Assuming the joining of components cannot be accomplished without soldering. If you analyze photos of very early gear, you'll see wires joined using clips or wood screws (the suggestion of using metal in place of a wooden chassis didn't come about until the October 1922 issue of QST).

Not so. Most R&D folks have their stuff assembled and
built by lower level techs. The cost of an R&D person
is too valuable for basic assembly work.

Yeah, if there is such a thing as a "True Ham", that's gotta be it. I'm
terrible at it. Broke out a window of the neighbors house trying it.
That was a proud moment.

Every year, the night before Field Day, a crowd of local hams gathers to
watch one of our guys launch monofilament over the 80' light standards
at the park. Always a crowd pleaser.

The following is often seen on contesting.com. Bill can run it however he wants (it seems by the declining posts over the past 4 years he's censoring it into the ground), and I get his point to limit repetition somewhat, but this is getting to be bit much. Let's face it. This is a guy and his cronies who spend entire ham "careers" repeating the same thing as much as possible in contests.

But he wants contesting.com to be repetition free...

Now his reply will be don't like it, don't use it. Or some poop about bandwidth (what year internet is this guy on ???). But these are contesters who think it's ok to jam repetition down our throats 35 weekends a year for 48 hours.

Guess people don't like in others what they see in themselves.

At least he took the time to summarize for the guy, but geezus enough with the damn chant. Shut it down if you can't handle it being a publicly used site.

You are right Bill..as a former engineering tech I can validate your remarks.
The EE's I worked for rarely if ever assembled anything.
And really it makes good sense. Gave me the opportunity to hone my assembly and
testing skills which included soldering and we all know soldering is the mark
of a "True Ham" 73 / DX

Totally disagree. Kids today have a much larger challenge than learning
code.
The world has become extremely complicated. Global economy has made
things extremely competative. Kids don't have time to fool with much
other than trying to get a high enough education level to survive.

Bill OM,

Maybe most, but not all. I design PC layouts, acquire parts,
assemble, and solder my own prototype circuits still, (including SMT
boards) even after 34 years as a design engineer, and I for one like it
that way. Apparently my employer does not consider that to be too
expensive :)

73,
Don, W6JL

Maybe the FCC should drop code AND theory testing and only test for
soldering ability.

I wrote "I wonder how well Maxwell, Marconi, Flemming, Armstrong, Collins,
et el were able to solder" in order to point out that soldering pro-
ficiency is not, as you say, the mark of a true radio person. I thought
that implication would be clear without having to provide an explanation!

If new hams peruse the newsgroups, and their news-readers spit out the
NGs in alphabetical order, then they'll be exposed to many very good
and useful amateur newsgroups before they see this one. In order
of appearance:

.antenna
.boatanchors
.digital.misc
.dx
.equipment
.homebrew
.misc
.policy
.space

so not to worry (too much!).

3844. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8782pd$8fv$1@news.hawaii.edu>
Source record: 119966
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

This is especially true during disaster work, but it's really kind of
pathetic that so many Extras -- who should know this better than anyone
-- don't seem to understand it.

Uh, Jeff . . .? Collins got his start in the manufacturing business when the Army and Navy discovered that his homebrewed rigs were better than anything the military had. Marconi had BUILT some of the military stuff. I would hazard a guess they they were pretty good with a soldering iron.

"The air" isn't just HF, Jeff. The vast majority of hams are active on VHF and UHF. A distinct minority are active in the HF ranges allocated for their particular license class.

> You can't name the company,

Wrong. I WON'T name the company.

> you can't state what their interests in HF
> were,

Wrong. Their interests are commercial.

> you can't name the polling company, you can't provide the actual

>-- don't seem to understand it.

You claim there is some unnamed Extra in AZ who can't solder and you
then extrapolate that to "so many Extras"? Keith, you've entered that
fantasy world again! Your time would be much better spent upgrading
from Technician.

>stuff. I would hazard a guess they they were pretty good with a
>soldering iron.

Ah, you took the bait. Tell us, Keith, the history of the soldering iron, a tool you seem to worship. I would especially be interested in the soldering iron Marconi used in the early 1890s when he began his experiments, what Branly used to make his coherer/decoherer detector in 1891, and what Maxwell used in 1873. Be specific now -- this is for the historical record.

> Millions flocked to HF in '63??

Until Incentive Licensing, the average growth of the license pool was
10% per year. From 1965 - 1990, there was a net LOSS each year -- more
SKs and non-renewals than new licensees. We weren't replacing
ourselves, and the average age of hams was increasing. Check the FCC on
this one.

You must be public schooled. Nowhere did I say that millions flocked to
HF in 1963.

> And don't forget the importation of JA-made
> gear beginning around that era helped to kill those fine companies.

Nope. Not one of those companies was hurt by JA gear. Do you even know
what Lafayette was? Can you tell me what happened to Knight-Kit without
having to find out from someone else? Heathkit went down because there
weren't enough people interested in building electronics to support
their operation -- hams were their major market.

Where were these wall to wall signals last March? Do you think that
maybe, just maybe, this has something to do with the sunspot cycle?

> >There is room for another million hams in the next ten years,
>
> Ah, now you've reduced your number to *one* million over ten years. But
> it's much more desirable to attract quality operators than quantity;

Yep. And I don't consider license class a sign of quality. But then,
my viewpoint is a bit skewed -- I mostly run on the ham bands during

disaster ops, and too many of the ops who show up aren't competent in that type of environment. Many of those are Extras, and many are not. I don't care. If you can't pull your weight on the air and I can't find something else for you to do (that you are willing to do), I thank you for volunteering and send you home.

> our 3.75 megahertz of M/HF spectrum jammed with 14.313MHz-type QSOs
> will endanger it more than lack of numbers.
>
> 73, Jeff KH6O

No. The only thing that has kept the bands for us is political clout. Without numbers, we don't get the clout. If I could license every person who walks past the door tomorrow, I would do so, even if they never touch a radio as long as they live. The Elect Officials don't know who does and doesn't get on the air -- they would just see all those names on the FCC books and figure maybe they don't want to make us mad.

Did you ever see "The Right Stuff"? Remember that line: "No bucks, no Buck Rogers!" Well no hams, no ham radio!

When he has to decide, a Congresscritter from some predominantly black or Hispanic district is a lot more likely to listen to the lobbyist from UPS than he is to someone promoting what is seen as an Old White Guys hobby. But if YOU ACT LIKE AN ADULT AND GET OFF YOUR BUTT, then go down to a junior high or high school in that guy's district and help them get a ham club going ("Hey! You want to talk all over the world? It's EASY!") then maybe ham radio will outlive you.

If you keep whining instead of looking for opportunities to bring in hew hams, you will someday be holding an official notice that your call sign has been retired and that the Amateur Radio Service has ceased to exist. There are companies already lining up to divide the spectrum, when it become available.

Here's an idea -- you and a couple of ham friends (especially kids and younger women) go to a school fair. Put up a booth and your Field Day rig (yes, it will work in a month with an R in it), and a sign inviting kids to come talk to the world. At 0900 that Saturday morning, you sit down at the table under a sign saying "Watch me BUILD a RADIO!" and put together a couple of QRP rigs. Have a mini-parade to the other end of the schoolyard with one, then put them on the air to each other. Have the youngest hams you can find interpret the code (at 5WPM) and repeating how EASY it all is. Teach the kids to send HI and let them do that.

Make sure you have flyers telling the kids when the next Novice class is. This is how school clubs grow. This is how, in 10 years, you will still be welcoming new members into your local clubs.

I've done this. It's a BLAST! ;)

So, you tell me what you are going to do. Instead of crying that it's unfair ("_I_ had to do this, why doesn't HE have to?"), why don't you take advantage of the sheer OPPORTUNITY that is being handed us?

How ham radio is regulated has nothing to do with personal survival or species survival. Better luck next time.

No one has YET shown how this BS of theirs is better for anyone except two groups:

1) NCI type whiners who refuse to work for what they want, preferring to whine for what they want, and who sit there holding their breath and stamping their little feet until the FCC wimps cave in and give them what they demand, and

2) Commercial interests who could not care less about ham radio and fall into two groups... those who seek to sell more radios to increase their bottom line and those who slaver over the idea of ham radio's demise so they can turn a profit from what they generally considered unproductive resources.

Sorry, but I for one am not interested in benefitting EITHER of those groups.

And ham radio suffers either way.

Some 'improvement'... NOT!

Bull Sh*t, Who ever said a change for the worse counted.
Example:
Here in New York we have the still married wife of a unconvicted rapist, liar, adultery committer and her team of Hollyweird freaks and screw ball's. All scripting a freak show using an *acquired empty house* to make her a senator..... to make things better, LOL

She has never been on the subway or come to see her *new* favorite New York ball, and hockey team's in fear of getting the Bronx cheer as well as Booed on TV.
Yet Rev.Al (a frequent guest of every jail) and the hordes work capable healthy welfare dwellers, homeless felons, ileagels and feminist's love her.
That is can not be good a good sign, its common sense.
Keep liberals out as long as you can.
NO THANKS !

Mr. Joe could you let me know if this neat sounding radio puts out 100w
on 180 meters or do you think we could get a few more pills out of it.
If so Im interested.
Dan 11W3345 :-)

Hey, that native G Man has forced
80+percent the low life scum and
freeloaders out of here and made
NYC a safe fun place again for the
first time in 35 + years.

Unfortunately whoever is not in
jail has already been shot and
killed or relocated to LA and
warmer climates to live and get
away with *crap* with help from
open armed liberals, I could see
why you do not like this.

06-08-1999 Yaesu FT-2600 coverage TX to 134-174 MHz
go to this web site for the complete mod info

http://www.mods.dk/indextext.htm

This modification opens uo transmit coverage. Be careful not to transmit outside the Amateur Bands.

Turn the FT-2600M off and remove the DC power cord.
Reomove the (5) screws securing the top cover and carefully remove the cover.
Locate and remove JP1011 (near Q1049) as shown below.
Reassamble the radio again.
Press and hold [A/N] + [D/MR] + [MHz] while powering up to reset the microprocessor.

Dan

My opinion is based not only on my own expwerience but on the opinions
of many Hams who built their own stuff. I have to report that some of
them are now silent keys...BUT very recently a member of QCWA asked to
borrow an old Editors and Engineer's Handbook because he needed to
finish a project which he had started many years ago. It was a linear
that used type 4-400A tubes. My own experience has included the
redesigning of most ARRL Handbook aqnd QST projects which I attempted
but less redesigning of non-ARRL pub projects...That is my opinion.
>
> Did you ever try to get the ARRL 1Kw linear that was in a 10" x 10"
alum box

No but I used the software disk and hardware description that came with
the 1996 ARRL Handbook for the Morse Code to ASCII project with not
very good results.
>
> Somewhere above 850 watts the RFC explodes!!!

That's SHOW BIZ.

I agree about that. I understand that it is a best seller when comp
[ared to such books as the Holy Bible and Dr. Spock's book on how to
raise children.

> : 73, Jeff KH6O
> --
> Jim Rosenthal, WA4STJ
I must admit that I carried a copy of the ARRL Handbook with me when I
was in the Army. I carried it to Korea as well. This was not part of
my military issue. The U.S. Army had lots of well writen technical
manuals both for learning the basics and for each individual item that
I had to service. One of my tasks was to help bi-lingual Korean Army
officers translate TMs into Korean. They weren't interested in the
ARRL Handbook. I was surprised to find that they were at a much higher
technical level....their main difficulty was in dealing with the
English language at that time.

Hams need MORE license classes...
so that they can read the schematics in both the ARRL Handbook and in
dedicated technical literature.

You are certainly correct Rileygotchu, the Clifton idiot was caught dead in his tracks by AOL, and now rumor has it that Mindspring is closing in on the notorious one. Iris was really nuts when she got the rejection window and was so furious that she went nuts on "NOMAS CHARLIE". information is coming soon on the investment collapse, and the facts will be interesting. Hey, what ever happened to WB2OTK ???? I heard the guys on 3894.5 playing stumpjumper jeopardy the other night and everyone got the correct answer, PORKBUTT.

>
Yes Bill....and that is why Hams need MORE license classes now than they did in the 1950s. Remember that the "Class A" license, which became the Advanced Class, was initiated when Hams started to use that new fangled RADIOTELEPHONY.
There should be a class of license for Hams who want to be digital communicators or to use each different signaling and/or modulating technique. How else can hams be expected to advance the state of the art and encourage the formation of a cadre of technical experts????... or have any Basis and Purpose????

On another note it is interesting to see that although some Hams have suggested it, our government has never made it a requirement that anyone who buys a ham transmitter or a ham transceiver hold a valid ham license. Hmmm...Is this something that the ARRL has promoted or is it something that the ham gear manufacturers have promoted? Even gun manufacturers don't expect to sell guns to those who are not qualified or licensed these days.
We have lost the Heath Company and can not expect to get new Heathkits anymore. This is IMHO bad for hams who would at least like to assemble their own stuff from kits. There are still a few U.S. companies who sell electronics kits. I had posted about a kit company called Ramsey. I built a 40 watt two meter ham amplifier from a Ramsey kit and it works well. Now I hear that our government is shutting down Ramsey...because it sells very low power FM xmitter kits that are well within legal limits...but that the government believes may be used

by spies. I can understand the government being careful about any terrorist explosive equipment that might enter our nation. I hope that they continue to do the good job that they are doing...BUT I don't think they need to shut down Ramsey because Ramsey sells toy kits that can pick up audio and be received by near-by FM radios. Such devices have been around for a long time and are easy to make from descrete components as well as kits. Heck if the spies want to build kits instead of buying finished products that are manufactured off-shore...maybe they will learn enough to be Hams or technicians and give up spying.
Nah...They don't have to get a Ham license to buy a 1500 watt xmitter!...or a private cell phone or a miniature remote video camera for that matter.

Just my opinion.

Hams need MORE license classes,
Bob Wex w2ilp (Illegal Low Power???)

Ther are some government people who would like to
ban the sale of blank paper because they fear that
secret messages may be written on the paper by spies
who use invisible ink.

Thank you for your keen observation Dick.
You are correct Twain died in 1910...but his essay, from which the
quote was taken, "Corn Pone Opinions", was first published in 1925.
Yeah although Twain is a sk, Tom Sawyer, Huck Finn and Puddinhead
Wilson live on..
... BTW Sam is a sk because he did know how to copy and send wired
telegraph signals as well as pilot river boats. Too bad he never
became a ham.
If freezers were available to store corn, as they are today,
there probably would never have been a Whiskey Rebellion....
or a need to develop corn biproducts. The pigs could depend
on eating most of the corn that humans don't want to eat and
we could be sure that quality hams are products of corn-fed pigs
instead of maybe being eaters of corn syrup filled candy bars.

Before you buy note if it contains corn syrup or corn sweeteners.
Cane sugar would be as cheap as salt if it wasn't supported by
the government...or if we could get it from communist Cuba again.
On second thought maybe we should be glad that corn syrup is
available as a substitute sweetener...We still haven't been able
to find a really good substitute for OPEC oil....Which is also
off-topic here.

Good points Alice. I dunno if your being on a ham band or the WWW
makes you feel like "Alice in Wonderland".
I enjoy communicating with folks who have a sense of humor. Like Hams,
Humorists are found in all chat groups. Funny thing that you mention
the mentioning of such things as purported "ARRL manipulations" (you
can spell it any way you want because some of us may recognize it and
some may not care to dare to recognize it). As for me...jokes are
never off topic anywhere.

Just remember that Hams displayed human behavior even before there was
an internet!

Hams need MORE license classes...and that isn't meant to be funny,
Bob Wex w2ilp (Internet Links Psychologists) or is it...
(Internet Links Paranoids?)

I've wisdom from the East and from the West,
That's subject to no academic rule,

You may find it in the jeering of a jest,
Or distil it from the folly of a fool.
I can teach you with a quip, if I've a mind;
I can trick you into learning with a laugh;
Oh, winnow all my folly, and you'll find
A grain or two of truth among the chaff!
--W.S. Gilbert--

No somber G-d could have made a bullfrog or a giraffe.
A profound book on laughter might be a final theology.
--George Buttrick--

He who laughs last was too dumb to get the joke the first time.
--who ?--

Many a paradox is said as a cliche. I will always vote for
the politician who can tell the best jokes, especially if
he laughs at his own jokes and doesn't take them too
seriously. Only professional comedians don't laugh at their
own jokes...a professional politician should be IMHO an
amateur joke teller. You can't tell a ham from a pro if he
keys or types his jokes.
--w2ilp--

I have heard it said that engineers do not have a sense
of humor. IMHO engineers who are hams do have a sense
of humor or they couldn't make fun of their serious
products.

As a teenager at the time price was a consideration for me. Raytheon's CK722 was $.99. Another affordable transistor at the time was the GE 2N107 which was a little more at $1.25. Used to ride my bicycle to Henry Radio to get them. That's when Henry Radio was a COOL place.

> Anyone want to express opinions regaring building all the coils and capacitors out of raw materials and junk? Like chewing gum wrappers??? Oh, that'd mean I'd need a TR switch setup to isolate it during transmit... hmmm. Dratted QRM.

Since the stuff I snipped had no mention of any specific construction project, I'll assume you meant the traps for your gravity-inverted vee.

Why not? As I've mentioned here (RRAA) before, Hams used to be able to build their own _tubes_! Tasks like winding coils and stacking caps are cake compared to glassblowing, and much safer (silicosis).

There is the problem of assuring value stability once the parts are built. You can calculate of course, but edge effect creep in with caps, and inductors like to "grab" nearby magnetic materials and change their values. Coils are fairly easy to tweak if you make provision for that during construction, but trimming a homemande cap can make you crazy. Choose wire size and foil/dielectric for power-handling capacity, and go for it. Oh, and don't worry about the smoke, it's traditional ;>)

Thousands of poor souls must have considered the exams for the last five years tough. The number of Generals has been about equal to the number of Advanced holders. If the exams were so easy, why didn't the thousands of Generals upgrade?? no code was required. What makes anybody think these Generals who couldn't--or wouldn't--pass the Advanced exam will now jump to Extra??

Something I have wondered as well, for many people the theory is just as
bad as the code (or worse).

There will be some upgrades, there will be some new Generals/Extras. The
average age of Hams will still go up. Also, after the first 'burp' of
new/upgrades has happened, the number of Hams will go -down-.

This is due to a number of factors: 1) Most people (us included I guess)
would rather be on the 'Net on then on the air. 2)It will still be
"difficult" to become a Ham (while all it will take to get on the 'Net is
$$$). 3)The attitude of some shown here will be reflected (just as it was
on the no-Code Techs), causing the new Hams to feel unwelcome, and they
will drop out.

The FCC handed us a flawed policy, the best we can do is live with it
and -NOT- blame the new/upgraded Hams. Else we -will- drive them away and
the the hobby -will- die.

Exactly, I predict a bunch of tech+'s jumping to general for the privileges.
I predict a bunch of advanced jumping to extra. I predict the great majority
of generals not jumping to extra.

Don't know Cecil when I took the General test at the first of January there were nine people there all were Generals or Technician plus operators upgrading. We went back to take the Extra Test on the Second of February and there were over 30 people there mostly Technician plus and Generals upgrading and several old time Advanced operators taking the Extra test. Several more were taking the five word per minute test on their way to getting a General or higher license class.

I have been to one of these session several times the last few years and while they usually had five or six people each time, I have never seen it where they had to use every table in the room and add four more along the wall just to accommodate all the people who wanted to upgrade.

The same has been happening at other sites around here. The one where I took the advance Test usually had only three to five people upgrading on average and they had twenty people taking the test. again most of the people upgrading were long time Generals or Advanced class operators on their way to getting their Extra class ticket.

Maybe this area is just a isolated occurrence but I am willing to bet that the number of people who will upgrade to General or higher will far exceed what most of the PCA's think. I know they would like to believe that anyone who has not passed a twenty word code test in the past has no interest in upgrading their license class but I strongly suspect that will be wishful thinking on their part.

Now before old Dick or one of his cronies cries out that these people are not real operators and are taking the easy way, let me say Most of those I talked with were long time Advanced and General class Amateurs and more than one told of taking his last test in front of a FCC official.

The GT-34 was also affordable at $.99. I was getting $0.50 per week allowance. I used some of each for audio amplifiers. The GT-34 generally had higher gain. I had to ride six miles by bike to get parts (Electronic City at Mid- Island Plazza or Electronic City (store name?) at Rosevelt Field Shopping Center) or wait to Saturday and take the bus to go to Hempstead at Standard Parts. Once in a while you could get wet slug tantalum caps (Mallory) at charity prices (100 piece prices) from Rosevelt Field Shopping Center store. This was about 1954,1955 and I was 12 years old. All this was on Long Island.

Dick is suffering from sour grapes because he can't upgrade and therefore
can't learn something new. :-)

Interesting and beautifully written.

Reportedly a Viet Nam veteran, WA4D wielded an immense intellect recklessly. He acted as if nothing could equal what he had been put through; therefore he was entitled to use the full breadth of freedom in expressing himself.

To appreciate his humor, you had to put on your thinking cap. Even then, you couldn't sort it all out unless you had his soaring mind.

My heart went out to him, as if he symbolized the futility of our war in Viet Nam and what we had put our soldiers through. But when you tried to express societal apologies to him, he deflected it with more sarcasm.

Yes, I agree. he is a U.S. patriot and was a misunderstood genius in the rough on ham radio.

God, what a ghastly idea. Gosh, I guess to apply this logic there
should be a different type of driver's license for chevy's, porshces,
and my poor little old Ford explorer. Better yet, let's require all
hams to take a 3 hour exam every six months to ensure that they meet
"high" standards. That ought to run all those appliance operators out
of the hobby.

Bill Sohl wrote:

> BUT it isn't required as a developed skill by any school
> I know of. Some experiments may call for soldering,
> but that's maybe the extent of it.

A good analogy would be requiring CS majors to demonstrate proficiency and efficiency in keypunching (or I suppose, keyboarding is the up-to-date word).

They may indeed need to know enough to struggle through it [not accurately the first time, or rapidly, or by the 'book' unlike a career data entry operator, perhaps] in order to get an assignment or project completed ..... in fact they could probably hire someone else to type it in for them, and not violate any class rules assuming they wrote the program themselves, etc.

But to require 100 characters per minute (or whatever) speed with < 1 % errors, for example, in order to obtain a BSCS or MSCS degree is ridiculous. So it is for soldering and EEs, of course.

Now then, employers are always free to add good soldering to the list of requirements for a particular job, or make successful completion of a training course in that a prerequisite for continued employment or advancement, but that is another matter altogether.

3916. On the DESTRUCTURING of Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-04 00:00:00 UTC
From: Samuel Goldstein <sjgold@optonline.net>
Message-ID: <wlqm4.1270$Bj2.5333@news.optonline.net>
Source record: 119806

My god...I have been in Hamdom so long I can finally see some revenge in my sights. If you live long enough, all the bad stuff that happens to you gets undone.

The latest FCC troublemaking, will go a long way to right a terrible wrong. Along the way, us General Class Licensees lost some spectrum to Advanced and Amateur Extra Class Licensees. With the "Boys from Newington" and the FCC the incentive licensing left us with smaller spectrum. I always suspected the guys from the ARRL really wanted some exclusive space for themselves.

Here were guys committed to ham radio, they could certainly find the time to get the code speed up to 20 WPM and learn enough theory to earn the higher class license. The rest of us English Majors could rough it out with the hoi polloi in the general portion of the band. Pick up the crumbs as the DX lurked in the Extra portion of the band.

I mean that another thing that really ticks me off. Why are we maintaining the CW portions of the bands when the code test is being downsized on its way to oblivion. Hey, it ought to be every man for himself. We certainly could use another 150 KHz on 20 and 200 KHz on 15 for full CW, phone and image. C'mon let's go for broke...let's go get the DX where it's hiding. I mean, they use phone down there why not us.

For crying out loud, I can't get a permit to put up a tower higher than 38 feet and with the population density here in New York I can't use the AMP very often. The stations the DX have are mind-boggling...wide spaced monobanders at 80 feet. Alpha Amplifiers are the norm...and they operate in the clear for the most part. Let's give them a run for their money.

Anyway, back to the thesis. With the latest in ham destructuring I believe I am only 50 questions times 70% to an Amateur Extra Class license. Good things do come to those who wait.

My goodness, Keith, you posted your comments to:
rec.radio.cb, rec.radio.shortwave, rec.radio.scanner
rec.radio.amateur.equipment, rec.radio.amateur.space,
rec.radio.amateur.antenna, rec.radio.amateur.policy,
and rec.radio.amateur.misc -- that must be a new
world's record! The follow-up line is set to just .misc:

In Keith Wood <kw@bctv.com> spammed:

>Not only that, it was the Kennedy Administration which chopped all those
>freqs out of the General band in the first place.

Actually, it began MUCH earlier than that:

Incentive licensing has been around almost as long as ham radio itself.
The idea of an IL structure was created in 1923. Back then the government
developed the Extra First Class amateur license; to be awarded the ticket
one had to be licensed for at least two years, take a test similar to the
First Class exam of that period, copy 20 wpm, and have a clean record.
Extras were then permitted to operate on a band that those with lessor
grade licenses were forbidden to use. That band (200-220 meters) had
originally been open to all hams.

Moreover, in 1959, the FCC asked hams, via a Notice of Inquiry, what
incentives could be tacked on to the Extra Class license.

3921. NNJ BARA Ham Auction Sun 2/6

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-04 00:00:00 UTC
From: bpn518@aol.com
Message-ID: <20000204000639.21975.00001489@ng-fq1.aol.com>
Source record: 119811

The Bergen Amateur Radio Assn.(BARA) is holding
its Annual Ham Auction this Sunday, Feb. 6th in
nearby New Milford NJ, located just 15minutes
from the GW Bridge at the New Milford Elks Lodge.

Recycle some of your unused equipment and find
stuff you really needed. Fun time for all, and
refreshments will be served.

Sellers, arrive at 7pm for check in of your equipment.

Auction starts at 8pm.

Directions:
From NYC and LI:
1) Come over the GW Bridge.
2) Take Route 4 (West).
3) Exit River Rd., make left at light, toward New Milford.
4) About 1.8miles, you'll see the big lighted Municipal Building.
5) At traffic light, make left onto Ptl. Ray Woods Drive.
6) Bear right at fork and lodge is on left.

From NJ points:
1) Take Route 4 to River Rd. (Fairleigh Dickenson Univ exit)
2) Bear left to New Milford. At light, make left onto River Rd.
3) About 1.8miles, you'll see the big lighted Municipal Building.
4) At traffic light, make left onto Ptl. Ray Woods Drive.
5) Bear right at fork and lodge is on left.

Talk-in on the 146.79 repeater (may have PL on of 141.3)

Hope to see you there.

Mainkook, the fact a lawsuit is tossed is simply another hurdle a litigater must jump. It doesn't mean that there is no merit to the material issue.

Among the reasons for dismissal are: failure to state a cause of action, wrong venue, statute of limitations bars suit, lack of jurisdiction, failure to join indispensable party, party has no standing, et al.

If it's a dismissal, there is the significant legal question of whether the dismissal is with or without prejudice. Summary disposition of a case results in greater scrutiny by appellate courts, since due process is at issue.

Contested civil lawsuits usually have many battles, the idea being to fully litigate all the issues, so the ultimate decision is right and just.
Many of the battles, example above, are over the adjective or procedural law, i.e. motion practice. Winning or losing a motion, while significant, isn't the end of the road.

Before you gloat over judicial action, be well informed as to what you are championing. Issues of greater importance to society than your distaste for K1MAN might well be at stake here.

Hello folks,
I need a Windows NT program for reading code. The Morse code is embedded in an ATIS signal on satellite TV transmissions. Presently, we are using an FM Systems ATIS reader to demodulate the 7.1 Mhz subcarrier and feed the audio Morse code (400-2000Hz, 15-25wpm) into a Microcraft Code Star display. I would like to replace the Code Star displays with a software package that will display the station ID on a monitor,by running the audio code into a sound card. Ideally, the software should be just a simple reader with no send or practice options, that any non-ham could easily figure out. Anyone with any input on various code reading software,,, your help would be welcome.

You're changeing the subject instead of answering the question, Robert. The subject is not about change. The subject is about why a date is a reason for change.

What does a date have to do with change? Why does a date justify change? Why do people say, "its the year 2000," to justify the change they want, when the year 2000 is a date, not a reason?

It would make just about as much sense to say the sky is blue, so we have to change ... (insert whatever). There is simply no connection between the two.

Dwight Stewart (W5NET)

3934. Raytheon CK722 and other early transistors question

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-04 00:00:00 UTC
From: Allan Pellnat <kx2h@worldnet.att.net>
Message-ID: <PoBm4.1322$Ks4.25961@bgtnsc06-news.ops.worldnet.att.net>
Source record: 119824
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I'm doing some research for an upcoming display of the history of the transistor and transistor radios for the AWA Electronic Communication Museum.

It seems that the general opinion is that the Raytheon CK722 transistor was the first mass produced for general consumption. However in poking around in some old Allied, Hudson, et al catalogs for 1953 I find some others listed. For example:

Allied Radio Catalog #131 for the year 1953, page 55, the first offering of transistors, lists 3 types available from either GE or Raytheon. GE G11 and G11A are Germanium Point Contact types. The only difference between them is that the G11A is □additionally tested for operation in trigger circuits□. Raytheon has a single type CK716 Germanium Point Contact.

Hudson Radio & TV Corp Catalog #H-53 for the year 1953, page 65 Shows same as Allied Radio #131. Same catalog, page 190 shows five types from Transistor Products Inc. They are Germanium Point Contact identified as types 2A, 2B, 2C, 2D and 2E.

Newark Electric Catalog #53 for the year 1953, page 65 Shows same as Allied Radio #131.

Then in 1954, Allied Radio Catalog #135 for the year 1954, page 63. Adds RCA to the manufacturers offering two Point Contact and two Junction types. The two GE types are the same as listed in 1953. Raytheon now lists three types. The CK716 is the same as in 1953 and two new types CK721 and CK722, Junction type transistors are added.

The following year, 1955, the CK716 was no longer listed.

So the question is who was first, GE, or Raytheon?

What happened to the CK716?

Allan Pellnat

3938. Nomination: Retired superstar of rec.radio.amateur.misc

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-04 00:00:00 UTC
From: Walter Gesundheit <w2dne@my-deja.com>
Message-ID: <87f80u$jt8$1@nnrp1.deja.com>
Source record: 119828

There has been a recent fit of rhetoric about K1MAN, a retired superstar of disruptive operating habits on 20 meters.

Folks, K1MAN and the current crop of goons at 14.313, 14.275, and various toxic waste sites on 75M can't hold a candle to "The Dawg".

As anybody who was on the air in the late 80's knows, WA4D was one of the true superstars of ham radio. No, he never went on any Dxpeditions or checked into any DX nets, but his talents transcended any of those activities. You see, WA4D was the Howard Stern of Amateur Radio before there was a Howard Stern on broadcast radio. WA4D, or WA4 DAWG as he was more commonly known operated mostly 75m phone, but would occasionally venture onto 20M to work DX (as long as the DX station was a communist, see below). Typically, The Dawg would check into the 75m Pig Farmer* nets and begin harassing the Pig Farmers* in the most hilarious ways. No, he wouldn't curse or use the racial slurs so many of the Pig Farmers use, but instead would concentrate his jabs at the effects of the Pig Farmers' old age and sedentary lifestyles. The Dawg pioneered the open discussion of Erectile Dysfunction, long before Bob Dole ever became its' paid spokesman. In fact, this would usually be the opening salvo in The Dawg's discussions with the Pig Farmers. He would then move on to the Pig Farmer's weight, their lack of knowledge of popular culture since the Eisenhower administration, and their "Scene out of Deliverance" wife and family. As you can imagine, The Dawg was not popular among the Pig Farmers. In fact, many radio fights were started with The Dog. The Dawg was reported to the FCC many times and became a legitimate superstar of 75 meters.

The Dawg was not satisfied with the regional and somewhat national superstardom that 75 meters afforded him. The Dawg wanted to broaden his fanbase and therefore moved to 20 meters to be on the international stage. The Dog's goal was to further human understanding and international political discussion. In order to achieve this goal, The Dawg pioneered the use of the call "CQ Communists". This was, of course, the time of the Iron Curtain, before the Berlin Wall fell and everyone lived happily ever after. At the time, all of Eastern Europe and Russia were under the control of communist governments. Amateurs in these countries would only give you name, QTH and a signal report before ending the QSO (I guess some things never change). The Dawg wanted to give these Eastern Bloc hams a chance to discuss international politics and would seek them out wherever he could. The Dawg wasn't interested in their name, their QTH or their signal report and would simply ignore these and begin discussing the failures of communism. He encouraged these hams to speak out on the air against communism and for the glory of capitalism. Unfortunately, these hams

seemed confused by The Dawg's discussion and would either curse The Dawg or quickly sign off. The Dawg was not popular among the communists. Again, many radio fights ensued and The Dawg was reported to the FCC many times. Only this time, he became a legitimate international amateur radio superstar.

It is for these reasons that I nominate WA4D as The R.R.A.M Superstar of The Century. No single individual represented the values and qualities this newsgroups as much over the last 100 years as The Dawg did. I would be happy to come to Dayton next year and give Mike his introductory speech if he is selected.

Epilogue:

To my knowledge, WA4D is no longer an active ham. The popular Amateur Radio urban legend is that WA4D's license was revoked or that the FCC forced him off the air. The fact is that his call still appears in the FCC database and his license doesn't expire until 2005. Some recent searching on the Internet found that The Dawg is quite active on the Vietnam Veteran's newsgroup and still has the same flare for causing controversy.

*Pig Farmer: A term coined by contesters for the southern (usually), old (almost always) racist bigots that inhabit 75-meter phone, at 3950 and other notorius fecal deposits on that band.

I think a bit closer analogy would be to require CS majors to be
able to key in a program on a PDP-8 or similar machine to
bootstrap it.

They'd be required to know how the concept works, know the
theory behind it, and know the application.

But why grade them on speed?

>FCC database and his license doesn't expire until 2005.

I haven't heard the Dog, WA4D on the air since 1994 or 1995. The last time I heard him on the air was on the 146.625 repeater in Arlington, VA. The rumor that was going around was that it was spousal pressure that forced his early retirement from amateur radio. Unfortuantly I guess the last big fine (I think it was 10K) from the FCC sealed the deal, but what fun it was to listen to an artist at work. :)

Cross Band Linking using a Kenwood TMD-700A

I have been using the new Kenwood dual bander that has the built in TNC, Sky Commander / remote control, APRS, and Cross Band link; I believe it has more bells and whistles than any other dual band (2 M/70 cm) radio on the market. During remote control of this radio while in a simplex cross-band-link to a local repeater I have experienced an inconsistent problem: Once the radio has entered a time-out mode after a 3+ minute qso it will sometime resume in a "locked band" mode rather than return to a "cross band" mode and will not allow me access via the remote control link. Is there any way to recover from this via the remote control link or do I have to venture out to the car each time to reset?

I use the this simplex cross band linking often in a temporary way while at my office....I work deep in the heart of a ultra high security building with lots of razor wire and thick steel reinforced concrete walls. The building is a RF hole and little gets in or out including radio waves/energy. I have good success by cross band linking: out on the Yaesu VX-5 HT at low power setting on 440.025 / simplex. My car/Kenwood TMD-700A sitting along side of the building repeats this out to the input of a local popular 2 meter repeater at low power. After I de-key the HT the Kenwood then listens on the local 2 meter repeater output and repeats this back to me simplex on the 440.025. I then have to wait for the squelch tail of the local 2 meter repeater to drop out before I can key up again given that the link is simplex. If I had ears within the building I could use the HT's split VFOs and listen directly to the local repeater output and do away with the down linking but I can't receive anything unless I boost the signal via the above arrangement. Anyone else out there have experience using this arrangement / radio and had similar problems of it reverting to a "lock band link"?

At home I also at times use a lock-band-link with the Kenwood out in the car/garage and split VFOs on the HT running the lowest power setting using a miniature/stubby antenna. I can then hit repeaters I couldn't with the HT running 5 watts and the regular rubber ducky antenna.

This way I can sit anywhere in/around the house rather than at a base station and can run the HT all day without charging given I am running at the lowest power setting.

>Yes Bill....and that is why Hams need MORE license classes now than
>they did in the 1950s.

For what purpose?
To prove what to whom?

>Remember that the "Class A" license, which
>became the Advanced Class, was initiated when Hams started to use that
>new fangled RADIOTELEPHONY.

Does not compute. Advanced had no additional privileges
beyond General when the licenses were redone in 1951.

>There should be a class of license for Hams who want to be digital
>communicators or to use each different signaling and/or modulating
>technique.

So you are saying that hams should NOT be permitted
to use certain modes until they pass a test on that
particular mode (or set of modes, e.g. digital)?

>How else can hams be expected to advance the state of the
>art and encourage the formation of a cadre of technical experts????...

Those that can and want to will. You are confusing
the goals of Part 97.1 as being a set of individual
requirements. No individual ham is required to become
a technical expert. The goal of the service is to
encourage the formation of a cadre of experts. So
far that is being done. I consider myself an expert
and ham radio was a root cause of leading me
into the technical field I followed as a career.

If you think that Part 97.1 requires EVERY ham to
become technical, well we should just obviously
agree to disagree.

>or have any Basis and Purpose????

Seems like we have and use many aspects of being
a ham besides just the technical. RACES, etc being
formost in my mind.

> On another note it is interesting to see that although some Hams have
>suggested it, our government has never made it a requirement that
>anyone who buys a ham transmitter or a ham transceiver hold a valid ham
>license. Hmmm...Is this something that the ARRL has promoted or is it
>something that the ham gear manufacturers have promoted? Even gun
>manufacturers don't expect to sell guns to those who are not qualified
>or licensed these days.

Just what we'd need. More government regulation.
Just think of the hassle that would be in selling used
equipment, selling at hamfests, etc. All any such law
would do is make life difficult for those that already
obey the rules and regs.

> We have lost the Heath Company and can not expect to get new
>Heathkits anymore.

Heath folded up because of the economics. It was
that simple. If you can't make a product that sells,
then you don't stay profitable.

>This is IMHO bad for hams who would at least like
>to assemble their own stuff from kits. There are still a few U.S.
>companies who sell electronics kits. I had posted about a kit company
>called Ramsey. I built a 40 watt two meter ham amplifier from a Ramsey
>kit and it works well.

So someone figured out a way to do so and make a profit.

>Now I hear that our government is shutting
>down Ramsey...because it sells very low power FM xmitter kits that are
>well within legal limits...but that the government believes may be used
>by spies.

I suspect that is more legend than fact.

<SNIP> of additional Ramsey comments.

A Yaesu FT-470, dual-band handheld was stolen here in Tempe, AZ. I am trying to get it back. I can offer a small reward.

Yaesu FT470, serial #2D520533

If located, please contact me, N7OUQ@ARRL.NET or the Tempe Police at (480) 966-6211.

Thanks
Ed (N7OUQ)

3961. N. NJ Ham Auction this Sun. 2/6

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-05 00:00:00 UTC
From: bpn518@aol.com
Message-ID: <20000205101942.27529.00000573@ng-cp1.aol.com>
Source record: 119771

The Bergen Amateur Radio Assn.(BARA) is holding
its Annual Ham Auction this Sunday, Feb. 6th in
nearby New Milford NJ, located just 15minutes
from the GW Bridge at the New Milford Elks Lodge.

Recycle some of your unused equipment and find
stuff you really needed. Fun time for all, and
refreshments will be served.

Sellers, arrive at 7pm for check in of your equipment.

Auction starts at 8pm.

Directions:
From NYC and LI:
1) Come over the GW Bridge.
2) Take Route 4 (West).
3) Exit River Rd., make left at light, toward New Milford.
4) About 1.8miles, you'll see the big lighted Municipal Building.
5) At traffic light, make left onto Ptl. Ray Woods Drive.
6) Bear right at fork and lodge is on left.

From NJ points:
1) Take Route 4 to River Rd. (Fairleigh Dickenson Univ exit)
2) Bear left to New Milford. At light, make left onto River Rd.
3) About 1.8miles, you'll see the big lighted Municipal Building.
4) At traffic light, make left onto Ptl. Ray Woods Drive.
5) Bear right at fork and lodge is on left.

Talk-in on the 146.79 repeater (may have the PL on, 141.3)

Hope to see you there.

No I'm not modest but truthful and candid. I can remember when this board was a seething hotbed of bigoty ever since the battle on 14.313 spilled over onto the Internet. I think back to all the awful racism and anti-Semitism posted by N0VFP as well as by anonymous and fictitously screen named hams and all that white extremist stuff to boot. My God, it wasn't America on here but a combo of Nazism and Communism. But AF2Y was always there, right in their faces. Tit for tat and never look back. And by God it worked. We have a rather dull board now but dammit-the extremists seem to have gone the other way. No one has to post anything about anyone being listed in Raymond Franklin's Internet Hate Directory. I read no references to any BARF board either. And for that matter almost all of the bigoted garbage on 14.313 is gone too. I guess Riley had a lot to do with that element of hate while I and other good Americans took care of the situation right here. Fellows who loathe bigotry-STAND TALL AND PROUD. We did a whale of a job and I'm proud of all of you.

Whoever encouraged WA9JYG, a guy named Schemmel or Schlemiel, to send me brazen e-mails, I wish you'd put a leash on him. I don't know him from a hole in the wall and he simply doesn't understand the FINANCIAL motivation of the latest FCC restructuring program so he comes across as a simple pimple, unequal to my intelligence and perspicaciousness. Will someone with more diplomacy take him aside and show him the right path? Maybe Brother John, KC3AU, can although he's no brother of mine but since he walks with the Lord the task might be better accomplished than under my aegis. Amen, gesundheit and thank you.

little radio..??? Due to the size, I am leaning toward that model
over the 5 Watt VX-5R <<---

Thanks..

3970. Low Power CW Transmitter Advice

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-05 00:00:00 UTC
From: wrnelson@my-deja.com
Message-ID: <87hvsu$fp1$1@nnrp1.deja.com>
Source record: 119780

Greetings,

I am not an amateur radio operator, so I appologize in advance if my question is inappropriate in this forum. But I think the ham community may be uniquely knowledgable in this area.

I am working on a project involving a remote data aquisition "probe" that will need to periodically send and receive small amounts of information between itself and a home base. The remote unit will be controlled by a basic stamp microcontroller and will be located up to about 15 miles from home base - possibly with buildings blocking the direct line of sight. The remote unit also needs to be easily portable, so a long wire antenna strung from poles is probably not practical.

My questions:

Would it be possible to achieve a range of 15 miles or so using a small enough amount of power so as not to require an FCC license in the US?

What frequency band would be best suited to this application?

I have seen cordless phones advertised with a range of 5-7 miles under ideal conditions, and my very limited knowledge of radio signals leads me to believe that a slow, pulsed CW signal, like morse code could extend this range significantly over a voice modulated signal. Is this correct?

Thanks for reading this. Any advice would be appreciated.

I asked the same question:

I received an anwer from the FCC, about 95% of the questions will be taken from elements 2 & 3A. You can still pass the test with the current material.

3978. Mobile Antenna Help Needed

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-05 00:00:00 UTC
From: Bill <bsplaine@sonic.net>
Message-ID: <Gg%m4.32$gl1.692@typhoon.sonic.net>
Source record: 119838

Lotsa questions.. need answers..... I also posted this to RRAA

I have the '00 Ford Diesel CrewCab and am considering the following:

Just checking to see if any of you guys have installed amateur rigs on a diesel truck. I'm interested in what bands have been installed, where you mounted the antennas, where you routed the coax and if you have had any problems with RFI and your truck's computer systems.

Here is what I would like to do..

CB radio with a Wilson 1000 roof mound. I'm considering cutting the whip to the center of the 10M band so I can use it for both 10/11M; 2M/440 dualband roof mount; and on the front of the bed I'm likely going to install a DK 'screwdriver' antenna for 10-80M or if I really use the Wilson for 10M also the DK will be only for 15-80.

Also, is there a minimum distance between antennas on the roof?

Thanks for any help
Bill/N6GHG

I thank you for the accolades but I'm just an average Joe with a very good looking wife and two very good looking children however I can and do influence thanks to a gift of God a.k.a. KC3AU. The thing about me that turns off a Hammer007 and a "Rileygotchu" and other sociopaths is that I TELL THE TRUTH. And I can spot a phony a mile away and 14.313 is a home for them. I and other decent guys have crippled the bigots on that frequency and on this USENET. We destroyed the BARF and the ones still hobbling around have toned down their incessant racist crap to a whisper. Whatever happened to the "phone patch issue?" Remember how WA2EXQ and his buds were going nuts writing and complaining about Intercon and Ruth Hoffman? Now whenever Lloyd is on, he refrains from anti-Semitism and phone patching issues. Remember when KV4FZ was ruling the roost? He's gone. Remember when Billy Gasell was talking about burning people in crematoria and using their ashes to make ink? He's been off the air for years thanks to the kind of opposition mounted by me and my pals. Remember Mike Galego, KA4MUJ, the oaf one slice short of a loaf. He's now playing gin rummy with KE2LO in a place hotter than Phoenix. Youngblood is NOT a bigot; never was and never will be but his sin is a refusal to stand up against it which signifies acceptance and he can't tolerate a staunch foe of it personified by me. "Rileygotchu?" Some say he's Polly while others disagree. If he is Polly, then it's obvious I've had no use for him for ten or more years. Who has? No, these people are no fan club members but in reality are afraid of me and my truthfulness and in life what one fears one hates. My point is don't put me on a pedestal-I'll do it myself.

Kenneth, yes, we are hams and we do have rules!

But what are those rules? Part 97? OK, but where, for instance, does the First Amendment, U.S. Const., intersect Part 97? In other words, what can we say?

That is just the question I asked Robert McNamara, Chief of the Private Radio Bureau, FCC at M Street, Washington, D.C. in the latter 80's. The very capable and cordial Chief paused, then asked me to turn off my tape recorder. He then conferred with his Counsel, Mr. Tom Fitzgibbons, gathered the threads of his answer, and a few minutes later went back on record. Of course, he couldn't answer the question.

There are many such questions that we hams are involved in pioneering. If we follow your admittedly well-intentioned direction, we'd all become mindless robots marching to the beat of the FCC, which often knows no more than we.

For example, the K1MAN broadcast issue is far more complex and meritorious than the FCC acknowledges. Believe it or not, there are two writings directly from the FCC supporting K1MAN's right to transmit information bulletins.

By denigrating hams without full knowledge of their background and motive, we are only furthering ignorance and injustice.

I have both and I would lean to the VX-5R over the VX-1R. The size is NOT
that much different and the extra power and the longer life battery is nice.
Plus the VX-5R is easier to program in the field and of course has more
memories. Go for the 5R. If you get the 1R U will be sorry later.

A transmitter with the range you want would likely require a license of
some sort.

Not knowing the type of "data" you desire to transmit makes commenting
on the "modulation mode" difficult.

If it basically a ON/OFF function, then CW would probably do. If anything more is needed Id suggest you look into DSP. Digital signal processing. That's all I can say at this time. Perhaps other's will be of more help.

Why would you need to know such? Seems to me that if you were
authorized that information, you would not need to ask here for it.
Thus I can only surmise you are seeking this info in order to use it
in some illegal activity. I'd suggest you try elsewhere.

>If you think that Part 97.1 requires EVERY ham to
>become technical, well we should just obviously
>agree to disagree.

Bill, no where in S97.1 is the word "goal" used:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:

The government says "fundamental purpose," not "goal."

And note that the disjunctive "or" is not used nor even implied
between the following subparagraphs:

(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.
(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

Those are not goals; taken together, that's our "fundamental purpose."
If the government so desired, it could make the above items mandatory.

Seem far-fetched? No more unbelievable than the FCC making it mandatory that we keep a log of every transmission we make, that we attest to having operated a certain number of hours on the air prior to having our license renewed, that we notify the government that we intend to operate portable. Remember those days?

A lawyer and a Hollywood producer are walking down the street when they
spy a beautiful actress leaving MGM.

The producer turns to the lawyer and says, "Boy, I'd really like to screw
her". The lawyer takes one more look at the women and turns to the
producer and says..

"Out of how much?"

Did you hear about the lawyer who gave up his practice and became a
baker? His specialty was strawberry torts.

What happens when you stick a lawyer with a needle? He bleeds habeas
corpuscles

Jeff, sorry, the example you raise is an incongruous and convoluted comparison to the question of Part 97 and the 1st Amendment, U.S. Const. The immediate criminal law covering your bull horn example is disturbing the peace. Call the police; they're empowered to handle it. Otherwise it can be handled civilly under the cause of nuisance.

The circumscription of the First Amendment by Part 97 is indeed an indigenous issue to ham radio and the FCC, and there are loads of cases touching on it. Not that they've been followed by the FCC, which would rather forget the complication the First Amendment presents to their charge of regulating the spectrum.

Jeffrey, I know that you'd love to reduce the whole thing to absurdity but you can't. Many issues arise out of Part 97 and the First Amendment, issues that challenge even Constitutional scholars.

In my view, Jeffrey, though your posts are usually on the money, in this case your logic is legally flawed and you are trivializing a vital issue. Still, I appreciate your effort.

I doubt that you can do what you want without some kind of license. To get a range of 15 miles (unless the antenna is very high, over 1000 feet) will require too much power for unlicense operations. There might be some microwave bands that this could be done, but I am not familiar with that part. Also when sending data it is a high speed transmission and the ammount of power needed is lots greater than the Morse code. Morse code is normally a very slow speed mode. That is why the bandwidth can be made smaller and you will get a beter signal to noise ratio.

I can relate to the soldering skill issue. As a graduate EE and an
Extra,
one of the high points of my career was when I changed a soldered in IC
on a factory built PC board during a weekend troubleshooting session.
On Monday the professional soldering inspector refused to believe that I
had changed the part until I showed her the removed part. But I did not
learn that skill in school.

Aloha,
John KH7T

Last night upon returning from dinner, I activated the answering machine and heard a message about an uproar due to remarks I made concerning what Fred said about WA4KBX, Joe. WRONG AGAIN. Why can't these dimwits get anything straight? I put no words in Fred's mouth, NONE. My comments were directly attributed to those made by Joe himself and none other. He said that when Fred visited, Fred asked where he was going to be put up. After perusing the situation, Fred LEFT and when Joe asked when they'd meet again, Fred replied, "I'll call you."
Then I heard Joe disdainfully announce, "If I ever see him again, that's alright. If not, then that's alright too." Rather cavalier, wouldn't you say? Not the words from one buddy to another but rather from a guy who was rejected, correct? I then relayed the info to Bill, K0ECK and Rube,K4RUB and also interjected my own comments about the strong possibility of Fred having seen cockroaches. I never said he saw them! Perhaps had he stayed to have a better look, he would have but when leaving swiftly, just the odor sticks in one's mind. And that's not to say that Joe's place smelled either. It's all hypothetical. Obviously Fred didn't stay because of disenfranchisement with the entire situation yet he never went into details. My comments were assumptive and possibly presumptuous which is redundant since they are analogous and any reference to the living or dead in this scenario is completely aboriginal. For all I know Joe might live like a king but then again Hulk Hogan might be wearing a bra and panties.

greetings Jane and also congratulations

One suggestion that was given to me when I was just starting out, on phone in particular, is do a lot of listenning. You can learn an incredible amount listening to how others communicate.

Also get your code speed up, while still a beginner on hf. Cw, though many downplay it, is a valuable way to communicate especially when you seem to have difficulties getting out on phone.

4008. N. NJ Ham Auction Today 2/6

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-06 00:00:00 UTC
From: bpn518@aol.com
Message-ID: <20000206104830.27139.00002033@ng-co1.aol.com>
Source record: 119691

The Bergen Amateur Radio Assn.(BARA) is holding
its Annual Ham Auction this Sunday, Feb. 6th in
nearby New Milford NJ, located just 15minutes
from the GW Bridge at the New Milford Elks Lodge.

Recycle some of your unused equipment and find
stuff you really needed. Fun time for all, and
refreshments will be served.

Sellers, arrive at 7pm for check in of your equipment.

Auction starts at 8pm.

Directions:
From NYC and LI:
1) Come over the GW Bridge.
2) Take Route 4 (West).
3) Exit River Rd., make left at light, toward New Milford.
4) About 1.8miles, you'll see the big lighted Municipal Building.
5) At traffic light, make left onto Ptl. Ray Woods Drive.
6) Bear right at fork and lodge is on left.

From NJ points:
1) Take Route 4 to River Rd. (Fairleigh Dickenson Univ exit)
2) Bear left to New Milford. At light, make left onto River Rd.
3) About 1.8miles, you'll see the big lighted Municipal Building.
4) At traffic light, make left onto Ptl. Ray Woods Drive.
5) Bear right at fork and lodge is on left.

Talk-in on the 146.79 repeater (PL may be on, 141.3).

Hope to see you there.

4009. Ambiguities of the ECPA Law, Government Abuses, and New York

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-06 00:00:00 UTC
From: You <sent@spam.con>
Message-ID: <389D9F6F.52236BA5@spam.con>
Source record: 119692
Cross-posted to:
alt.radio.scanner,alt.government.abuse,law.court.federal,alt.politics.usa.congress,rec.radio.amateur.misc,alt.journalism

The ambiguities of the ELECTRONIC COMMUNICATIONS PRIVACY ACT OF 1986 (ECPA) are being used in an abusive way against Citizens. It was originally created to protect Citizens from our Government electronically invading your privacy. Government has begun enforcing it to protect Government from being electronically monitored by Citizens.

For the record, this law (H.R.4952 & S.2575) began in the 99th Congress. It was sponsored by Rep. Robert W. Kastenmeier of the House Judiciary and passed the House. Then it was reported by the Senate Committee on the Judiciary and sponsored by Senator Patrick Leahy. It passed the Senate and President Reagan approved it into law.

March 1, 1990 the Secret Service improperly conducted an early morning raid at Steve Jackson Games (SJG). A company that produced fantasy books and games. There was a long court battle and in the end, SJG won a lawsuit against the Secret Service.

With the help from the Electronic Frontier Foundation (EFF), they used the ECPA against the Secret Service. The judge did not find that Secret Service agents violated the ECPA when agents seized the Illuminati BBS at SJG. The judge did find, however, that the ECPA was violated by the agent's seizure of stored electronic communications on the system.

In August of 1997, FBI's Electronic Crimes Task Force jointly with the New York Police Department and the Secret Service used the ECPA against the Breaking News Network. It is believed to be the first case of Government using the Electronic Communications Privacy Act of 1986. BNN owners were charged with intercepting Government service messages of the New York Police Department, New York Fire Department, Office of Emergency Management, Emergency Medical Services, and other Government services.

The New York City Mayor at that time was Rudolph Giuliani, The New York Police Commissioner was Howard Safir, U.S. Attorney for the Southern District of New York was Mary Jo White, and the Magistrate Judge of the U.S. District Court for the Southern District of New York was Leonard Bernikow (resigned 11/2/98). As a result, some journalists quickly began saying the crackdown was part of a larger effort by Mayor Rudolph Giuliani and his allies to exert more control over the New York media. City police commissioner Howard Safir said that as a result of the intercepts, the city has changed its private communications system. He declined to say exactly how the new system worked, but added that BNN's alleged interceptions had not "compromised" the city's police work.

Some journalist said BNN was little more than a tip service. Associated Press New York City bureau chief Sam Boyle said the service monitored the city's many police radios and beeped clients with news about anything that might look interesting. "It all had to be checked out before it could be used," Boyle said.

BNN said one former volunteer was "a former city official with ties to the Secret Service and who for months has publicly vowed to destroy this company." BNN also accused federal law-enforcement officers of "heavy handed conduct" and suggested that the charges were motivated by government's own embarrassment and was a frame-up. The company is outraged at what appears to be a crude and blatant attempt by the NYPD Intelligence Division to embarrass and intimidate a respected news gathering organization," said a defense attorney for BNN. Prosecutors refused to say whether the interceptions had damaging effects. That says the interceptions were not damaging which means the prosecution could be called malicious.

The intercepted messages were not scrambled or encrypted messages. The program used "Message Tracker" is also used by law-enforcement for Government to intercept private messages of Citizens.

Repeal or amend sections of the US Code Title 18 Part 1 Chapter 119 to remove the dangerous interpretations resulting from Federal Judges persuaded by people in our Federal and non-Federal Government. The wrong people in control of Government will try to raid, arrest, prosecute, and convict News Media organizations and average Citizens for having newsgathering electronic devices and impose their form of legal censorship. Then they will move Government Public services to a private/encrypted radio system. Reasons why we need new laws to force Government openness.
http://www.qsl.net/n4tyv/#Openness

Here is another case worth noting. It involves a data slicer and Government communications. Remember, in the past Government communications used to be very open. Data slicers have many legal uses in the radio hobby. It has a New York City connection.
http://www.qsl.net/n4tyv/freq/Bcheek.htm

The Government raid on electronic stores seems motivated to protect Government's privacy from electronic devices used by Citizens. This has a New York State connection.
http://www.qsl.net/n4tyv/freq/Ramsey.htm

Since 1992, many repeater owner/operators have not been able to understand morse cw at all. (No-Code Techs) This has not seemed to bother the FCC one bit, with cw ID's running 20 wpm. Keep in mind that many commercial and public safety systems are also ID'd by morse. Most of their techs don't understand morse at all either. The only thing that matters is that the FCC can decode the ID. I assume that they will merely slow down the morse as far as necessary on a tape machine to copy one in question.

:KD1PL on the net stated that : "3950 was a **Nationally Heard Prime Time**
frequency. Now if that isn't a *broadcasting* mentality I don't know what is.
While his statement may be essentially correct, we all know that is not what
amateur radio is for or about.
Septic-tank wrote
>As Charlie Brown once said, "Don't you know sarcasm when you hear it??"
>We all often like to poke fun at Riley, who's actually the one with this
>"broadcasting mentality" problem.
>

What a bunch of BS, now blame it on Riley why don't you. Who is "we" by the
way?
Your statement doesn't hold water. It's obvious that his (kd1pl) statement
indicates what the "net's" perception of what amateur radio is for or about. It
always has been. It's also obvious from the "monologues" that take place for
up to 25 minutes at a time, that the net does more BROADCASTING of opinions
than discussion of events.
Besides "everyone" KNOWS that the net has done all it can to DEVELOP an
audience, which in and of itself "indicates" broadcasting. We all know that!
Certainly, honesty isn't a big part of that group so "they'll never admit it"
but "WE" know, don't WE!

Nah...BUT there certainly should be different qualifications required
for driving, piloting and maintaining automobiles, ships and aircraft!
The Ham equipment of today is as different from the Ham gear of 1950 as
there exist differences between cars, ships and airplanes.

> Better yet, let's require all
> hams to take a 3 hour exam every six months to ensure that they meet

Well the ARRL may have read what some of us Hams have been saying
here. They admit that the present Ham licensing structure is
technically dumbed down...and as a result they are proposing to start
their own advanced certification program. Maybe that is going to be
too little to late as it will not be part of any official FCC
structure. It will be an incentive however for Hams who want to
certify that they are technically capable at a higher level to do so.

Or the FCC may have operators who can copy 20 wpm (which, IIRC, is also the requirement for a Radiotelegraph Endorsement on a commercial ticket).

"My first thought was that it was some sort of "export" model...but FRS is only legal in the U.S. and these are marked "For U.S. use only" on the packaging."

Actually there is now a European equivalent of FRS; it's called PMR 446 and provides eight channels between 446.0-446.1 MHz, which obviously isn't what came in your "illegal" radio. Several manufacturers are now selling PMR 446 versions of their FRS radios. Britain's Radio Authority has a Web page about PMR 446 at http://www.radio.gov.uk/document/ra_info/ra357.htm.

My guess about your radio is that they may have left out a jumper, or put one in that wasn't supposed to be there, or something along those lines. The obvious answer is to send the unit in to Motorola for service.

The PURPOSE is to comply with the BASIS and PURPOSE of AMATEUR RADIO as
stated in Part 97. Even more important: to enable Hams, as a group to
be recognized as being more than appliance users and to make Ham Radio
a valuable asset recognized by academia, industry and if need be
military leaders...not solely a fun hobby for conspicuous consumers.

NOT TRUE...In 1951 you could not use radiotelephony on 20 or 75 meters
without an Advanced ticket. There was no 15 or 40 meter phone bands at
that time. General class could only use phone on 11 and 10 meters and
higher frequency bands. All HF phone bands were later opened to
General Class.

> to use certain modes until they pass a test on that
> particular mode (or set of modes, e.g. digital)?
Not necessarily. I don't think that anyone could easily change the
present privilages. I would think that those who want to experiment
with newer digital techniques than are presently in use might have to
qualify at higher levels. Perhaps those who want to run the higher
levels of RF power should also require more exams to prove that they
know what they are doing. Perhaps those who set up repeaters should
be able to prove that they are better qualified to do so. BUT anyone
who wants to show that he or she has gained the technical knowledge
from formal schools, on the job training or self study might want to
prove it...just like people who have the money to pay a fee can
now "prove" that they are qualified for a "vanity" call.

> and ham radio was a root cause of leading me
> into the technical field I followed as a career.
I agree...Hams as a group are required to be potential experts BUT then
why should it be easy for all hams as individuals to earn an Extra
class license? Surely there must be incentive for some hams to earn
higher level licenses or the group will have no proof that they are any
more than CMBers (citizen's multi-banders).
> If you think that Part 97.1 requires EVERY ham to
> become technical, well we should just obviously

No hassle at all, even Radio Shack now has a data base listing all
licensed Hams. It would be easy to identify licensed hams...I do so at
every VE session. Let them show their Ham license and drivers license
for ident. If mail order is involved look up their call in one of the
on-line data bases and compare with the name on their credit card.

> then you don't stay profitable.

They folded because of rising costs of components and especially
because of rising costs of technical writers who are needed to make
instruction manuals, etc...and a marketing survey that showed
that "dumbed down" hobbiests were not as interested in building kits as
part of their hobbies as they were in the past...and that our
government was afraid that the kits might get into the hands of the
unsupervised latch-key children who eat paint chips and would surely
burn their houses down if they had access to soldering irons!

> >This is IMHO bad for hams who would at least like

SAME-same...Please read below.

> And note that the disjunctive "or" is not used nor even implied
> between the following subparagraphs:

Hey ...Nowhere is the word "subparagraph" used! You recognize
subparagraphs. I recognize GOALS.

Each subparagraph may stand alone as an encouraged GOAL.
Each goal is a potential reason for Ham Radio to receive support from
our government. Without such GOALS there could be no purpose for our
government (the FCC) to grant hams the use of radio frequeccy bands.

ALL OF THE ABOVE ARE GOALS! All Hams can not be expected to
individually satisfy any or all of the above GOALS
BUT
as a group, it is hoped that Hams will continue to meet the above goals
to the best of their abilities...For if they do not do so then Hams as
a group are not continuing to comply with their very BASIS and PURPOSE.
> ----------

>
> Those are not goals; taken together, that's our "fundamental purpose."
> If the government so desired, it could make the above items mandatory.

This is not so, except in time of war or national emergency. Whatever
Hams do is done on a voluntary basis otherwise. If you study Part 97
you will see that all the regulations are made to limit what hams may
do but not to command what hams MUST do. It is a hobby and, as I said
before, we are neither "amateurs" nor "professionals" [by their true
definitions], nor are we a "service"...although some of us may
volunteer to serve in a manner that is complementry to our goals.

portable.
> Remember those days?

Yep...but requirements have changed.

The Basis and Purpose outline GOALS in five subparagraphs. IMHO (a) and (e) are becoming obsolete, respectivily due to the availability of local cell phones and the international internet. Communication in the Information Age is not unique to licensed Hams...BUT the potential value of (b),(c), and (d) stand as our only remaining unique valuable GOALS. We must support incentives that will make more [but certainly not all] future Hams capable of meeting those GOALS. If we do not Ham Radio will die.
>
> 73, Jeff KH6O

You have made some good points Jeff BUT I am not foolish enough to believe that the government could at this point in time force all Hams to educate themselves well enough to work at the cutting edge of the state of the art. I do think that when governments and politicians have more of a chance to look at what will be evolving in the future they may reconsider and the license structure will again be changed so that there exists more incentive for Hams to learn modern communications technologies.

I asked this question a year ago or so.
I apologize for not keeping better notes.
I searched www.deja.com for my original
post and the response, but I can't find it.

I have a FT-51R, and can never figure out how
to get the thing to decode DTMF.
(the instruction manual isn't the best)

Can someone post the instructions for this.

Thanks,

Dave Webb

All afternoon I listened to K0ECK run me down because of my satirical embellishment of remarks on the air made by WA4KBX regarding Fred Roll's leaving Joe's trailer in a hurry instead of staying the night. Yet, now get this folks, that same fellow, Bill, K0ECK from Saint Louis, has no reservations whatsoever in communicating freely with Duane Jacobs,WB9BCC, a louse who did his best to convince eveyone of his being awarded the Medal of Honor which never happened. Thomas Cuttone, Special Agent of the F.B.I. located in West Paterson,New Jersey, sat with me in my home on July 5,1997 and told me that Jacobs was an impostor, a disgrace to the United States of America and would appreciate if I and as many hams as possible would STOP COMMUNICATING with the man. And that's the gospel folks! Can you imagine the deceit, impudence and rottenness of anyone claiming to have been awarded this nation's highest medal of valor and still being talked to on a regular basis by K0ECK and others while simultaneously yours truly is castigated because of rather innocuous remarks? And that raises a question: in light of such hypocrisy, who have their heads on straighter-the crowd on 14.313 or 14.275. And I think the .275 crows labels themselves as Goodfellows? Did I wrote Goodfellows? Good? HYPOCRITES is more like it. And here's something else to consider. I could get on the air right now and openly apologize to Joe, WA4KBX, AND I WILL IN A DAY OR TWO because of my silliness and Joe would probabaly shrug his shoulders and pass everything off as ho hum. And Joe would be right because MY REMARKS, not Fred's since he made none, are easily forgettable. But are Duane's? Think about it, so-called hypocritical Goodfellows. And isn't it strange that these Goody Two Shoers, supposedly my friends, give BCC a pat on the back despite the official dislike of same by our FBI while the other side has always shunned Duane after the truth came out. I'm DISGUSTED!

I'm not certain that this is a troll. There is alot of misinformation about the restructuring out there. I'm a volunteer examiner, and only about half of the people taking upgrade elements for restructuring were aware that they had to come back in (or after) April to get the upgrade processed.

The question about code speed was actually reasonable (although based on misinformation).

Thanks Bob,

The simple analogy for Jeff might also be various
other "institutions" that have a basic purpose
(i.e. goal) to develope graduates skilled in medicine,
engineering, social sciences, etc." The INSTITUTION's
goals are not, by any stretch those of each and every
student.

Part 97.1 sets the goals (purpose) of the SERVICE.
The fact that any individual ignores one or more parts
of the service goals does NOT in any way put that
ham in a bad or non-conforming status with regards
to being a good ham vs a bad ham.

Cheers,
Bill K2UNK

Actually, the amateur regulations don't prohibit or require any
particular mentality when transmitting.

And, since "mentality" cannot be measured, and in fact has no
physical existence whatsoever, it would be impossible to enforce any
such regulation even if it existed.

Happy transmitting,

Kevin, WB4AIO.

Let's see... today only 1 in 10 hams is an Extra.
That doesn't seem to indicate that getting to Extra is
an easy path. Indeed, only about another 1 in 10
are Advanced (no code test needed) yet we still
have as many Generals that have NOT upgraded.
Are they all inactive or SK? I really doubt that.

> Surely there must be incentive for some hams to earn

If I sell at a hamfest, I sure don't need the cops or
the FCC overlooking my transactions to be sure
I only sell to a ham. Such a law would, I repeat,
only make work and trouble for hams who are
and do obey the law today.

I have no argument whatsoever with KT4TR on those grounds. NONE. If it were not illegal to pretend to be a Medal of Honor awardee, the FBI never would have been to my home and the reason the agent was here was to see if my story of Duane's "heroism" matched the one told to Bob Youngblood and judging by the reaction, it did. However Bob had no right to declare that I sponsored Duane's lie because he knew that I never thought anyone would stoop as low as BCC did. So you see KT4TR was part sleuth and part wise guy. And if I had been able to produce a photo of that fake medal which never existed to begin with or one of Duane wearing something resembling it, he most certainly would have been arrested. Also KT4TR had no right lying about an association between the fake medal and the State of Israel. No such reference ever was made and in that sense, Bob took a page out of Herbie Schoenbohm's handbook which surprised me since I don't consider KT4TR a racist. His crime is in not coming out against those who are. Keep in mind that KT4TR made enemies because of his support for an anti-Semite from the Virgin Islands and once he dug that hole, he never was able to climb out and never will.

They didn't say that they (the ARRL) thought it was dumbed down, they said that members have commented that it is dumbed down. So they (the ARRL) are going to take measures to bring back technical quality to hamdom.

Why? Nothing bad is ever said on CW. There are no bad operators on CW. All CW operators keep their appliances within the specifications. No reason for the FCC to ever monitor CW.

You don't need the tones to listen. If you are authorized to transmit,
they will tell you what the tones are.

4045. I have a Motorola Talkabout 250 which operates on GMRS/BUSINESS frequencies instead of FRS!

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-06 00:00:00 UTC
From: toomanyradios@aol.com
Message-ID: <20000205200642.11269.00003626@nso-fi.aol.com>
Source record: 119864

Greetings all,

I posted this to the alt.family group and hope it's not too off-topic for this one. My thinking is that some of the hams here might be able to shed some insight on a very interesting little radio which I have come across.

A few days ago, I purchased a pair of Motorola Talkabout 250 FRS radios. Both units appeared to be fully operational, but are not compatible with each other. Today, I found out why:

Using my PRO-2006 as a reference receiver to see which one was bad, I found that unit 1 transmits and receives perfectly on all 14 FRS channels. Unit 2 also transmits and receives perfectly...but on 14 GMRS & BUSINESS frequencies, all 12.5Khz below the appropriate FRS frequencies!

Channel 1 = 462.550
Channel 2 = 462.575
Channel 3 = 462.600
Channel 4 = 462.625
Channel 5 = 462.650
Channel 6 = 462.675
Channel 7 = 462.700
Channel 8 = 467.550
Channel 9 = 467.575
Channel 10 = 467.600
Channel 11 = 467.625
Channel 12 = 467.650
Channel 13 = 462.675
Channel 14 = 467.700

Has anyone else ever run across an FRS radio that does this? This came straight from the retailer to me in the original "bubble pack", so it has not been modified in any way. Plus, I don't think these radios CAN be modified to go out-of-band, can they? My first thought was that it was some sort of "export" model...but FRS is only legal in the U.S. and these are marked "For U.S. use only" on the packaging. Date of manufacture is 12/7/99. The two radios have the exact same FCC ID and TNP numbers.

What exactly do I have here? Simply a manufacturing mistake, or something which was built special for "someone" and was never supposed to sold to the general public. Anyone?

Fellow Hams,
I have heard, but have not been able to confirm, a rumor that, beginning on April 15, any repeaters that use Morse code to provide station identification must reduce the code speed to 5wpm max.. This is to allow the new Extra Class hams to be able to identify the repeater call signs. Can anyone confirm (or deny) this rumor? If this is NOT true, then will we be faced with a situation where HF generals and extras will not even be able to id the call signs, pl's etc. of the 2m repeaters they may be using?

I have seen some truly BAD soldering that was
certainly not representative of a "developed"
soldering skill BUT the eperiment that the
soldering was used to set up worked fine.

There is a BIG difference between soldering
in production vs a bench experiment.

Cheers,
Bill K2UNK

Kim, everything you write is important. In the case of newsgroups, you're tieing up readers who migh just as well read something else more meaningful.

As you can see, I'm a proponent of putting all of your ability into your writing, so the readers get the most out of it. We can never work too hard for those who take the time to read us!

> enforcement? Thanks

The same way one cracks the tone used on a local repeater - by scanning for the tone on the input while the frequency is in use. Duh!

You should see the union paint job on my 92 GMC truck. If I drive faster
than 45 or so, the paint blows off in big sheets.

Did you complain to GM. I did and they told me the problem was excessive miles (I had over 175k, on an 89 Grand Am, bought new). According to their letter, the paint vibrated off the car. After a few go arounds, they offered to repaint the car for $200. I did the next best thing, I took the $200 and bought a 92 Honda ACcord, new. It's still running, a tad beat for the wear (230k mileage), but never a lick of trouble. No wonder they have less than 28% of the US car market now down from 49% in the mid to late 80's.

GM never admitted that the paint formulation they used between 1989 and 1993 was defective. That the primer was not good and that the "new and improved" method they used to prepare the metal surfaces was in fact originally designed for plastic parts and not metal.

I'm a big believer in japanese made cars. I've abandoned US made cars with the 73 Buick piece of crap and haven't looked back. Problem was, I wanted a full sized truck. Toyota is getting there, but there not quite there yet. I've seen ads for used Mercedes diesel Unimogs for about 8k. I wonder if they're worn out?

GM doesn't get any more of my biddness, they just haven't figgered it out yet.

Isn't that what underachievers would say? Or do you think they would tell people that they simply achieved less than everyone predicted or expected?

I don't think so. An underachiever is someone who achieves less than predicted or expected.

Have you achieved what might be predicted or expected of you based on your abilities? Or are expectations about your ability to achieve rather low? Just wondering why you interjected your comment. Seems it might be a sensitive subject for you is all.

We have for sale 1 Central Electronics 200V transmitter. It is in
EXCELLENT condition. 9.5 out of 10 at least, if not 10 out of 10.
100% Electrically & physically. It could easily polished up and be made
BETTER than new. Pictures can be created and sent via e-mail for
serious offers. Price is $800 OBO. U-Ship (I'm a UPS shipper so
Shipping will be real cost, not inflated "Mail Boxes Etc" price)

Thank you for viewing this post,
Joe N6YYO <><

Because the FCC monitors the HF amateurs bands, including the CW
segments, you can be sure the technicians at the monitoring stations
have the ability to copy code well above 20 wpm by ear.

As I brilliantly wrote in another post my answer to this junk remains...

After all of you die hard code fiends are dead and gone, or at least in a small minority, I look forward to the day that I can talk on HF with my fellow hams, burp, pass gas, work the action of my firearms on the air, and tell cat killing stories (Like those on 3898 and 14313) without any more grief from the sticks in the mud.

The Welfare Generals and extras won't give a fuck, because they'll be using SSB, or worse, AM!!!!!!!!!
We're gonna ruin the frequencies for all the old geezer gasbags!
We're gonna be breaking and roger beeping and using all other sound effects we can get our hans on!!!
When all the old gasbags hear us cutting up, they'll have heart attacks and strokes, then there will be a floosd of used equip on ebay from estate sales for us to modify!!!!!! Can you say 175% modulation??? The splatter will be great!!!!!

On Sun, 06 Feb 2000 23:32:20 GMT, scorpion589@mindspring.comNOSPAM wrote:

4080. Internet Accessible AR-Cluster

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-07 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <87lgop$qo0$1@nnrp1.deja.com>
Source record: 119643

You are welcome to connect to the internet accessible AR-Cluster at
KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH.
Please enter your QTH in the form: Chicago IL or Oslo Norway so that we
will know where all our new friends are from! You will also be
reminded to SET/LOCATION, that's optional but recommended. If you set
your location, then the AR-Cluster will calculate beam headings for you
to various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION your_call

You can correct any errors using the SET commands.

For more information on AR-Cluster including a Logon Tutorial and
Command List go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet
connection. Its a huge advantage as then your logging program will
monitor the dx spots and alert you to contacts you need.

However, here are very simple instructions for using software already a
part of Win95/98:

First connect to your ISP as you normally do when using the internet.
Click Start then click Run.
In the box enter "telnet 209.32.226.63" (without the quotes of course).
Now click OK.

You should now be connected to the KC0DJO AR-Cluster.

Enter your call. If what you type does not display, then you will have
to turn on local echo. In the Telnet window click on Terminal /
Preferences.. and check Local Echo and then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C

HELP

Welcome to the KC0DJO AR-Cluster.....and 73 de Ron N5IN

Source record: 119645

Actually, broadcasting is defined in the regulations, and under that definition virtually nothing on ham SSB could be reasonably construed as broadcasting.

You'd have to show intent to reach the "general public," a purpose which would be very ill-served by operating on various frequencies and by getting on the air at infrequent and random intervals as I do.

In fact, if one wanted to reach the general public, Internet broadcasting or purchasing time on commercial stations would make a lot more sense in every way.

I like to relax and joke around, and discuss things with friends on amateur radio who are on an intellectual wavelength that allows them to understand me. That's why the legitimate group on 3950 is important to me personally.

I suppose I've received mail from a handful of SWLs over the years, and now count a few of them as friends, but that's not why I'm on the air. My contact with fellow amateurs is 100 times my contact with SWLs at the very least.

And the suggestion that there's something wrong with posting to White nationalist newsgroups is childish -- it's evidence of the same mindset that would view posting to Second Amendment discussion groups as "evil."

Happy February,

Kevin, WB4AIO.

OK Kevin we arn't really talking about YOU. Of course, YOU knew that.
>In fact, if one wanted to reach the general public, Internet
>broadcasting or purchasing time on commercial stations would make a
>lot more sense in every way.

Agreed, I think that was why Riley suggested to Vic that he and the net look
into the Internet or some low power FM station. You remember that letter don't
you?
>I like to relax and joke around, and discuss things with friends on
>amateur radio who are on an intellectual wavelength that allows them
>to understand me. That's why the legitimate group on 3950 is
>important to me personally.

Are you trying to say that "the legitimate group" is only the net? Come on now.
Even you know better than that.

>I suppose I've received mail from a handful of SWLs over the years,

Yeah and I'll bet many other have also. The "So called" net has gone out of
it's way over the years to "create a listening audience" read that "broadcast".
>and now count a few of them as friends, but that's not why I'm on
>the air.
Again, YOU are not the topic.

My contact with fellow amateurs is 100 times my contact
>with SWLs at the very least.
OK
>And the suggestion that there's something wrong with posting to
>White nationalist newsgroups is childish --
Did I say there was "anything wrong" with posting there. i said that it is
evidence of a "mentality".

it's evidence of the
>same mindset that would view posting to Second Amendment discussion
>groups as "evil."

Now who said that? Oh, YOU did.

Put it on a spectrum analyzer... you may be off on your frequencies... Just because your scanner stops on that frequency, it doesn't mean that the radios are programmed wrong. It may just be your scanner.

Chris

P.S. Goto 462.5625(Channel 1) on your scanner and transmit with the (bad) radio.. Then try 462.550 on your scanner..

Keith Wood wrote:

Inbred illiterate
Lloyd Davies the blimp drooled in message ...
>
>GOTO:
>
>http://www.homestead.com/goodfellows3/goodfellows3.html
>
>I for one am glad to see this embarrassment to the 20m band gone.

You should worry, you're stuck on 6 meters and above, mainly because
you're too frigging STUPID to pass a code test.
Say, Lloyd did you find that "southern gal" yet? Or are you so
repugnant to the females in your area, they all wear garlic around
their necks to keep you at bay. Don't bother to deny it, you couldn't
get laid with a high credit limit platnium visa card in a whorehouse.
It's your face and body odor lloyd, do something about them and maybe
you'll have success. But I kind of doubt it, since your lack of female
companionship is the result of natural selection. The females WANT your
gene cesspool to die out.

>Now if we can get AF2Y and KC8JBO off we'll be in great shape!

So you want to "get us off?" Is this some sort of come-on, lloyd?
Sorry to dissappoint you, but we don't swing that way. You may want to
look up Baby Huey or Dave Tolassi for those sort of intimacies.

4090. TECH-PLUS/GENERAL UPGRADE

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-07 00:00:00 UTC
From: Bill Kane <k2ane@home.com>
Message-ID: <ygsn4.34295$eC2.341901@news1.alsv1.occa.home.com>
Source record: 119653

Several weeks ago I read on the ARRL website that one can contact the FCC for confirmation of having possessed a technician's class license previous to March 21, 1987 and thereby prove that credit exists for the successful completion of the general portion of the written exam. Being a tech-plus licensee, I wrote to the FCC and in 2 weeks time I received from them this very confirmation. The reply also had an official seal affixed to it signifying it as an official document.

To say the least, I was very surprised at this quick and thorough response. It certainly saves a lot of time and hassle for me since I had moved and lost all of my old documentation. To any other ham in a similar situation I would recommend doing the same thing so that when the new license structure goes into effect, they can present this documentation to any VE session, pay a fee and immediately be upgraded to general.

To facilitate this request, include all pertinant information to enable the people at the FCC to lookup these records, which by the way are on microfiche and not on a computerized database. Inform them of your name, address and callsign relative to the time frame pre-1987. If you know the exact dates of having obtained your technician license, provide that and it will make their task a whole bunch easier. In my case I knew that info because I checked it out on www.qrz.com where they were running a copy of their first callsign CD and that date of becoming a technician licensee appeared there.

Send your request to:

Federal Communications Commission
Consumer Information Bureau
1270 Fairfield Road
Gettysburg, PA 17325-7245

Enclose a nice note thanking them for their assistance in this matter. That is what I did and received what I think to be a very fast response.

Good luck & best 73's de K2ANE

Ummmm...
a) Being in a ng is not the same as actually transmitting on a
frequency.
b) Nobody know this guy from Adam, there's a good chance he doesn't
even have a ticket.
c) Let him try this attitude on the air...watch what happens next...
d) besides, from what is seen and heard, there's _worse_ folks in the
ARS than on CB. The bands are _already_ CB. I avoid HF like the
plague.

That's one edge the satellites have...you gotta have half a brain to
work them....

Source record: 119655

Just in case Kevin, you did not remember the FCC's concern I'll include the text of the letter here.

HUDSON, NH:
The FCC has asked a net control station of the Liberty Net on 3950 kHz to justify the net's use of Amateur Radio frequencies. Via Certified Mail May 7 to Extra class licensee Victor A. Misek, W1WCR, FCC Legal Adviser for Enforcement Riley Hollingsworth said monitoring on May 1 indicated that Misek's station and members of the group for which he was acting as net control "began transmitting on top of existing Amateur communications that were already in progress." Hollingsworth said that such operation "is considered deliberate interference and cannot be tolerated on the Amateur frequencies." Hollingsworth pointed out that Congress has authorized the FCC to seek information to enable it to determine the qualifications of a licensee or applicant. "We are so far unable to determine how the transmissions of this group meet the standards of, or contribute to the purposes of, the allocation of frequencies for the Amateur Radio Service," Hollingsworth wrote. He suggested The Liberty Net explore operation on the Internet or seek a low-power FM broadcast grant if that service is authorized. Hollingsworth reminded Misek that Part 97 "prohibits communications on the Amateur frequencies that, on a regular basis, 'could reasonably be furnished alternatively through other services.'" He also pointed out that Part 97 prohibits broadcasting .

By the way, the FCC has authorized the licensing of low power FM stations up to 100 watts.

The Advanced license give you only slightly greater operating privileges.
It just is not worth the effort.

: > does such certification mean to anyone?

If you take it at the -main- ARRL office rather than by mail you get more
braging rights. But only till a few of the present NG PCAs take the tests,
after that, it too will be dumbed down because the questions will be
"leaked" to the general public.

: They are exploring "continuing education credits" which are the
: equivalent of what the FEMA self-study courses offer (if you pay the
: tuition to a local jr. college).

They could combine it with the CW certification program and make 'em
learn 55 WPM! That's a sure fire way to "smarten it up" (again). ?:o

Spoken like a true pseudo lawyer.
Measuring mentality is not the point.
The point is nobody is fooled by the Liberty Net's long standing and
obvious goal of getting their "message" of deceit and doom to as many
listeners as possible. All under the guise of the "free wheeling
exchange of ideas". What a pathetic dog and pony show.

Well, Chief, a net is collection of independent stations who happen to want to communicate with each other.

W1WCR can't control who chooses to check in to the Net (only three stations that I know of, egregious jammers all, are forbidden to check in), and he certainly can't control what they "want" in their minds.

True, it is possible that some of them might want SWLs to listen in. Some of them might want a big dish of praline caramel ice cream. Some of them might want a date with Drew Barrymore. Who knows?

Have you ever checked into the Liberty Net? I know you've been in QSO with me and with the NCS for the Net. Does that mean that you, too, have a part in this supposed collective "goal"?

(As for me, when I've wanted to reach the general public, I've done other things. I've never used amateur radio for that purpose.)

The Liberty Net has been in existence for about thirty years, in much the same form as it has today. I doubt that it has significant non-ham listenership compared to any broadcast station you could care to name, so clearly this alleged "goal" hasn't been reached.

In fact, I think that what publicity the Net has received, and what SWL listenership it may have, are due far more to the activities of its detractors and jammers than to anything that Net participants have done: The lunatic from Evansville travels around 75, 40, and 20 meters, telling lurid tales of the naughty Liberty Netters who are so incredibly "evil" that they actually want their race to survive; and certain well-known persons on this newsgroup have made a career out of attacking the Net to the point that it is now extremely unlikely that anyone who has read the amateur newsgroups for more than three days is unaware of it.

With all good wishes,

Kevin, WB4AIO.

Agreed.

:Something those welfare-hams have no interest in, I guess. ;)

You "guess" wrong!

You mean that hams that have been code tested as Generals (and even ones tested by the FCC) 20-40 years ago are ALSO "WELFARE-HAMS"?? Those -are- the hams that the original statment was refering to.

If you don't mean them, then the "real" welfare-hams ALSO met (will meet) the requirments in place at the time.

Actually it is considerable. It is the amount of band space from
advanced to extra (175KHz total) which is negligible.

General to advanced almost doubles the HF space on the non WARC HF bands
15-80

Are you looking for a fresh modern look to your Control Software, with lots of functions for the Amateur Radio, and SWL operator.....Have a look at the features below;

- Frequency operation covering from 0 KHz to 999,999.999 KHz
- All Modes including the Reverse functions for CW and FSK
- All Tones as per the TS570 operation
- Main fine tuning with 10 Hz steps
- Selectable coarse tuning with steps of 100 Hz, 1 KHz, 5 KHz, 10 Khz, 0.5 MHz and 1 MHz. (Additional steps can be provided, depending upon the demand)
- Tuning knob with Fine and Coarse Tuning. The Fine tuning provides approx. 1.2 Khz per revolution and the Coarse tuning at approx. 8.5 Khz per revolution.
- Standard Memory switching, as appearing in the Radio
- Band switching is provided by way of an additional screen. User definable with 50 selectable frequencies and Mode
- Manual entry of a frequency is provided
- Quick Memo operation using 5 Memories
- Flock operation
- Frequency Scanning operation. 50 user definable ranges are available, that include the Mode, Frequency Step and Pause time. Includes a description of each range
- NR1/2 Noise reduction operation
- BC Beat Cancel
- 300 memories are available where the first 100 are used for downloading and uploading the Radio's memories. All memories have Split operation as well as Mode, Tone and Description. Memory scanning is available based on a code against each memory, and/or by limiting the memory locations to be scanned. Additional functions include; current VFO to current memory location, and current memory location to VFO A/B. The Radio memory locations can be transferred to the program and vice versa, modified, and then re-loaded back to the Radio
- Standard VFO A/B/Memory selection, with A=B, B=A and current memory displayed transferred to VFO A
- Split Frequency Operation with TF-Set
- RIT/XIT operation with the appropriate frequency display
- Volume, RF, DSP High and Low, and IF Shift front panel controls. IF
- shift displays the frequency
- CW Auto tune function
- Filter display, showing the setting, depending upon the mode in operation
- Power, Microphone Gain, Keyer Speed And Delay, VOX Gain, and Squelch Level are adjustable using a slider control on a separate function

screen
- Antenna selection, AGC, Tone and the Channel selections are also available from the same separate function screen
- Power Switch, Attenuator, Pre-Amplifier, VOX, Speech Processor, Send Function and Antenna Tuner are all operational
- S Meter function
- Local as well as GMT, Date and Time is displayed on the front panel
- Not necessary to have the Radio connected, in order to have the basic set-up functions available, e.g. Scanning, Band and Memories
- Logging Function that allows Local and GMT Date and Time recording. The Frequency and Mode can also be transferred from the current VFO. The Call Sign and Description can also be recorded. This is an unlimited database with sorting available on each column
- Communication speeds from 110 Baud to 256 Kbaud (57,600 Baud is the max for the TS570)
- Up to 16 Com Port Selections

Program has been fully tested, and runs under Windows 95, 98 and NT

This program was written based on the Kenwood TS 570, but it will work on other Kenwood models...

If you would like to download it, you can find it at my home page address below;

http://web.one.net.au/~kjbutler/page2.html

Please let me know what you think of it, and if you would like any changes made, or additional functions.

I have a few ideas in the pipeline to further increase the functionality.

4112. WTB 71.9 PL Mitrek

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-07 00:00:00 UTC
From: "Dennis A. Homerick" <w8nw@richnet.net>
Message-ID: <389F3629.27F86EAC@richnet.net>
Source record: 119675

thanks for reading this message. I'm looking for a 71.9 analog or DPL
code plug for
a Motorola Mitrek radio. If you have truth table for the DPL Code Plug
, I can build a
code plug with the truth table!

Thanks
Dennis, w8nw

[...]

As a matter of fact, I stumbled onto the Liberty Net when, while leisurely tuning through 75 meters one Saturday night, I came upon an unbelievable cacophony of music, profanity, and electronic noise makers on 3950. Obviously, I had to listen to this chaos to figure out what the heck was going on. Turns out that I was hearing K5BLB, WA9KJI, and some unknown jammers letting loose on the Liberty Net. But it was the comments being made by the Liberty Net's participants that really made a lasting impression, because I realized that a lot of what was being said was exactly how I felt about America's current condition. "Thanks" to the malicious jamming of K5BLB, WA9KJI, and whoever, I became a regular listener to the Liberty Net.

So, KK7HO, when you become filled with jealousy and rage at the thought of shortwave listeners like me who eagerly look forward to the Liberty Net each week, and who consider those who jam and otherwise try to derail the Liberty Net to be at best a bunch of clowns, you can thank your jamming buddies K5BLB, WA9KJI, W9ART, and even your own newsgroup postings for making the Liberty Net so well known and listened to.

LOL!

I note the somewhat shaky "cease-fire" that has subdued 3950, no doubt due in large part to Sheriff Hollingsworth coming to town. I also note some tentative dialougues between the 2 warring sides. Except for a few individuals such as WA9KJI and W9ART who seem hell-bent on continuing the insanity, it seems to me that there are at least some

issues that both sides are in agreement with, such as gun control, the continuing threat of communism (China) and the New World Order, the sickening treason and corruption that permeates our political system, etc. I only speak for myself, and others may disagree with me, but sometimes I think that the campaign to destroy the Liberty Net has less to do with ideology and more to do with jealousy or personal hatred. I sincerely hope that someday all this can be resolved.

>
>meters, telling lurid tales of the naughty Liberty Netters who are

>

To me, anyone who does NOT want their race to survive is incredibly evil, regardless of the race in question.

73s.

But there is NO license required by government for me to
repair or maintain my automobiles and/or trucks.
Aircraft has a whole set of government oversight
because the airplane is highly prone to really bad
things happening if maintenance or flight worthyness
is in any way jeopardized.

Yeah, right. Sure you will. Will you have them posted before or after
all the AF2Y stuff you claimed to have but have never posted.

> The pages I have made about 'ole Charles WON'T HOLD A CANDLE TO
> KC8JBO's PAGE, hohohoho.

Since there's nothing on them, that's not much of a claim.

>http://www.angelfire.com/vt/af2y/

Bwahahahahahahahaha. The one that allegedly has the DWI report shows it
as a busted image, and when you look at the source code it shows
"triangle.gif" where the report is supposed to be. Some DWI report. You
should learn something about how HTML works before trying to bluff with
an empty hand.

> The Internet is a WONDERFUL THING......

Yeah, if you're an immature coward you can say any BS whether it's true
or not. And, since you've been claiming you were going to post AF2Y
stuff since June and haven't done squat, that sort of puts you right
in the middle of that category, doesn't it?

Why take an extra when all your connections are available using the general class. CB operators make friends on their frequencies and those with General Class certification really do not have to or do not want any higher rating because what they have meets their needs. Very simple. Its like a BS degree, if this meets your needs why get a Masters. IF a masters meets your needs they upgrade to a Ph.D The pay is not greater! It all depends on the needs of the person or individual.

No but they (the amateur regs) DO "prohibit *broadcasting*. Also mentality can be measured i.e., your white supremist "mentality" can be measured and evidenced by the "type" and amount of posts you have in such newsgroups as "alt.politics.white-power"
http://x45.deja.com/[ST_rn=ap]/dnquery.xp?search=word&defaultOp=and&query=%7ea%20(kevin.strom@innocent.com)%20%26%20%7eg%20(alt.politics.white-power)&svcclass=dnserver&ST=PS&CONTEXT=949887555.1098514445 or
alt.politics.nationalism.white
http://x45.deja.com/[ST_rn=ap]/dnquery.xp?search=word&defaultOp=and&query=%7ea%20(kevin.strom@innocent.com)%20%26%20%7eg%20(alt.politics.nationalism.white)&svcclass=dnserver&ST=PS&CONTEXT=949887555.1098514445 or any of the others that you frequent.
Ones "mentality" is evidenced by by many things Kevin, such as their "speech", "actions", "interests" and "behavior" so Kevin, for you to make such a claim in defense of the situation is weak, couldn't you do better than that?

Haw Haw Haw

If you have been to a hamfest anytime in the past five years, more than half of the ameteur operators wear underware that is large enough to fabricate circus tents with them. I say that we should make it easy and silk screen the callsign of the repeater on the underware and run them up the antenna tower. On a clear day these large briefs can be clearly read by someone with 20/20 vision from 25 miles away, eliminating the code problem once and for all.

Glad I could help.

Charles, you are forgetting a couple of facts that need to be set straight. It was you who tried to validate WB9BCC's claim to the medal of honor. I remember you calling me and telling me that Duane had received a secret medal
that was kept secret to protect the Israel state and that I should accept that as the truth. Well, Mr. Cuttone listened to the facts and went directly to your home and set the record straight. Now you are making excuses and trying to distance yourself from the demented, so called hero. You should have known better, but you were all caught up in the Porkbutt bullshit

I would like to see WB9BCC hiding in the closet on veterans day when the parade is going past the flag and all the great veterans are standing near. Maybe he would like to go visit my dear friends who are now a name on a granite wall. Yes, you really knew how to pick a friend. You were great when you told me that I was disgracing an AMERICAN HERO, obviously you were truly confused.

<<<Excuse me Bob, but you're exaggerating again. Never did I call you to make reference to the Medal of Honor and Israel. What did Israel have to do with this whole thing? You either took things out of context or are once again acting brazenly and irrationally.If I remember correctly the conversation we had dealt with keeping the lid on Duane's "Medal" because of the problem we were having with North Korea and according to him(and he must have told you the same bullsnot), his platoon brought by sub were sent on a mission to kill non-combatant North Korean commies such as government officials, teachers, youth leaders etc. How you interpreted Israel to be involved is astounding. Why did I support Duane while you were screaming he was a fraud? For two reasons (1) he'd been saying he's Jewish which also is a lie and you know that I take pride in my people as you do in yours. He said he was in a concentration camp and freed by a friendly guard. That too is bullsnot because Jewish children were sent to EXTERMINATION camps and never freed but murdered or used in sadistic medical experiments. Duane said his father was shot by a Nazi soldier. That's a lie too. Duane has absolutely no knowledge of the German language; was born and raised in Chicago or environs and is Catholic or Protestant. (2) I supported him because never did I believe that anyone could be so low as to lie about something as important and precious as the Medal of Honor. Even when you came on the air with irrefutable proof, I rejected it. Call me gullible and you'd be right. Call me too trusting and you'd be right but never call me unpatriotic because I love this country and despise anyone who tarnishes her image and Duane did exactly that. And if I were any less of a man I'd now still be supporting and talking to Duane as many do but dammit
I'd sooner talk to the devil if such a thing existed. Stop making me the fall guy for this incident because once I knew the truth out of the mouth of Special Agent Cuttone, I never spoke another word to WB9BCC and never will.

Although we don't get along nonetheless in this instance you were right; I was wrong. If this doesn't put an end to discussion about it, then go ahead and beat your drum until the cows come home. I simply will not care.

>>>>>>It's true. I originally made an error on the year. Special Agent
Thomas Cuttone of the West Paterson.NJ Branch of the FBI was in my home on
July 5,1998 to take down my verbal account of WB9BCC's "fairy tale" about
being the recipient of the Medal of Honor. Up until that time I believed
BCC. Cuttone told me in no uncertain terms that it was a LIE; BCC was an
insult to this nation and asked that I and every other ham who then knew the
truth, cease talking to the man. I complied more than willingly. Others have
not and it's a shame. There's been a lot of
raw deals on 14.313 but that story about being the recipient of the Medal
CROSSED THE LINE as far as I'm concerned. WB9BCC should be shunned by
veterans and non-veterans alike.

So is there a rec.radio.licensing or rec.radio.policy that
we should post our ads to, now that you all busy deciding
who is going to run your club?

No matter how true your message is, it loses its impact when
it is cross posted indiscriminately to irrelevant news
groups. This news group is rec.radio.swap. Either buy
something, sell something, or even bitch about ebay if you
want. Please keep your licensing problems/views out of here.

i'm afraid i'm one of the originals who thought cutting back the code requirement would virtually eliminate a 'how serious are you about being a ham' filter. in a way, i still do. but keith makes some very good points. our hobby is only as good as we want it to be. even if newcomers only have to learn 5wpm, it doesn't mean they need to stop there. maybe we SHOULD have neighborhood get-togethers. the only problem is that we might have to run for our lives when our TVI-laden neighbors show up!

4134. Heathkit HFT-9 Tuner with Random Wire?

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-08 00:00:00 UTC
From: David Bernazzani <dber@gis.net>
Message-ID: <57l1as4j0f8pvv03a98r7ru528b49tek3a@4ax.com>
Source record: 119539

Hello all,

A while back I got a used HW9 with matching HFT-9 antenna tuner. The tuner did not come with a manual (but I did get a good deal!). I've used with Coax feed successfully last year. I now want to try loading up the tuner with a random wire setup to work some of other bands (I have a 40/15M dipole but wanted to work 80M) I looked on the back (and inside) and noticed three screw-terminals labeled as follows:

```
-------------------------------------
Term1 Term2 Term3
| |
+--------+ Balanced Line
wire
-------------------------------------
```

Where it says "wire", there is a physical jumper wire connecting screw terminal 1 and terminal 2. On the inside of the tuner, terminal 1 is connected to the center pin of the Antenna jack and to C2 of the actual tuner. Terminal two and three run into some form of matching balun (4:1?) inside the tuner probably for balanced lines.

Anyway, what is the proper procedure for hooking up a random wire to this tuner? Should I simply connect the random wire antenna to screw terminal 1 and remove the existing jumper wire which is there? Is the jumper wire only needed for balanced line hook-up?

It seems fairly obvious, but I don't want to smoke any equipment for lack of knowledge...

Thanks for any help you can provide!

Regards,

Dave Bernazzani

What I am saying Jeffrey is that, all other things being equal, the two examples constitute an incongruous comparison. Here is why ...

My example first. When we look at the FCC using Part 97 to regulate ham radio, the First Amendment comes into play substantially as a mitigating factor. Here is an example: the FCC might not want the KlMAN-type information bulletins but may be precluded from stopping them by the lst Amendment.

Now your example of someone wielding a bull horn in front of another's home in the wee hours. This isn't barred per se by the First Amendment. Clearly, it falls instead within the ambit of disturbing the peace and nuisance.

The fact that both have human speaking doesn't bring the 1st Amendment in as a mitigating factor. This legal stuff is so complex, not only to grasp, but to explain all the twists and turns.

The bottom line, Jeffrey, is that you have to do a legal analysis, which is like a chess game. After parsing each example, then you compare the apples with apples and the pears with pears.

The exceptions do complicate this analysis, because it is true that certain things that we say anywhere are illegal, such as advocating the overthrow of the government. That is the reason in the first sentence of this effort I wrote "all other things being equal." The statement is indispensable to a meaningful legal analysis.

Jeffrey, you always manage to spark great discussions. You know that if I happen to be incorrect, I'm always happy to learn and set the record straight. p.s. I was only a bit above average in legal analogies on the SAT.

I'll be becomming an "extra lite", "welfare extra", or "novextra"
depending on your preference. Should I get a vanity callsign like
x#EL or x#WE or x#NE? So I can send phonetics like "blah blah
extra lite QRZ?", "blah blah welfare extra QRZ?", or
"blah blah nov extra QRZ?"

:-) troll alert!

A) I wasn't referring to the newsgroups, I was referring to his attitute he expressed in relation to being on HF.

B) I can't argue that one.

C) I agree whole heartedly, and I hope his attitude does not come to fruition on the bands.

D) I have had a bug to try the birds and maybe soon, with time permitting, I will get to see the
joy you have seen playing with them. Sure sounds like fun and to my mind, quite an accomplishment.

: For some reason, lots of others have done something that is "not worth the
: effort"..

My point was that this same line of thinking also applies to the many
Techs who -also- (for what ever reasons) didn't upgrade. But in their
case the PCAs called them "lazy". I really haven't seen PCAs calling
(code tested) Generals lazy becasue -they- didn't just take the give
away "welfare-ham" test. (Double standard strikes again.)

OK both of you (ycthulhu and kevin) cut the "propaganda". The jamming is a direct result of the Liberty Net just plowing onto the frequency and tring to take it from others that had it. PERIOD>
Now for the SWL's, I guess I'll have to dig out the tape of VIC, you know, W1WCR, the Net Control station, along with KE2LO, discussing ways of getting more Listeners. then Curtis N5HDQ coming in with a comment about that and the Vic stating that they (the liberty net) have Thousands and Thousands of shortwave listeners. Not to mention the many many times net members have actually "broadcast" to SWLs. I'll dig em out OK? You know shit like Merry christmas to all of the swls out there. I'll find it and maybe we can put this to rest.
Your "lines" aren't fooling people, most are smart enough to know. 73

The ability to get college credit for courses and labs that they are
more than qualified for.
> To industry?
The ability to get the oportunity to get hired as technicians at a
level that recognizes their ham experience.
> To the military?
The ability to pass through military technical schools with advanced
placement due to their prior experience and training thus saving the
government costs in providing such training.

I did all of the above. I am not unique. Many other hams also did such
things.

I don't "believe"...I know. I held a General Class license in 1951 and
was only permitted on 10 and 11 Phone.

I understand that Canada now requires their Hams to use only type
accepted equipment. Is this what we want?

No but IMHO such people can probably all pass appropriate exams. We
don't need to have problems in order to take measures to prevent them.

Again...speak for yourself...BUT don't assume that technical ham
certification can not hold value for the young hams of the future!
A license that is recognized as being more than wallpaper will attract
hams who want to do more than talk to the wall because they know how to
do so and can be permitted to do so.

With the CW requirement removed and only three classes, 1 in 2 Hams
will be Extra Class after April 15th....Wait and see. Then what?
Don't ever doubt that.

...Except there is no way to formerly prove higher level technical
qualifications.
And with only three classes of old fixed Q & A it can not continue to
be the case nor IMHO is it at the present time.

Well ...If they obay the law today and there are more laws added; they
can obey the law tomorrow...besides people aren't supposed to become
hams primarily to make profit from selling ham gear.

If a large U.S. firm can't support a CEO who makes over ten times what
their best engineers can make it either decides to make it off-shore or
give up making it. Thus if a very large market is not probable then
the firm sells out or folds. No need to stray further off topic here.

> >They folded because of rising costs of components and especially

Is it far fetched that our government is now going to ban the sale of solder that contains lead??? Heathkits would have to be a lot more expensive if they were forced to have Silver-Bismuth solder with non-toxic flux and a higher temperature melting point.

> >> >This is IMHO bad for hams who would at least like

> >> I suspect that is more legend than fact.
> >
> >Nope... I have read reports about the confiscation of Ramsey kits by
> >federal authorities from several sources.
>
> Confiscation of ALL or only certain KITS?

I don't think that the agents have the smarts to identify one kit from another.
According to a "W5YI Report"
"About $30,000 in products were confiscated from Ramsey which the Customs Agents turned over to the U.S. attourny in Buffalo. John Ramsey, the firm's president said none of the merchandice was designed to be sold as 'surreptitious surveillance equipment'. In fact he said, most of it...like a wireless microphone kit that sells for less than $6.00 - was ill-suited for espionage. The U.S. government is apparanyly re-inventing federal wiretapping and smuggling laws to include small hobby transmitters."
<end of quote>
AND...You think the government would be hassling Hams if the Hams who wanted to sell their transmitters had to identify the buyers as

licensed Hams???

Charles, you are forgetting a couple of facts that need to be set straight. It was you who tried to validate WB9BCC's claim to the medal of honor. I remember you calling me and telling me that Duane had received a secret medal that was kept secret to protect the Israel state and that I should accept that as the truth. Well, Mr. Cuttone listened to the facts and went directly to your home and set the record straight. Now you are making excuses and trying to distance yourself from the demented, so called hero. You should have known better, but you were all caught up in the Porkbutt bullshit

I would like to see WB9BCC hiding in the closet on veterans day when the parade is going past the flag and all the great veterans are standing near. Maybe he would like to go visit my dear friends who are now a name on a granite wall. Yes, you really knew how to pick a friend. You were great when you told me that I was disgracing an AMERICAN HERO, obviously you were truly confused.

Hey Polly! - found this one online just 4 U - Enjoy, ya've earned it!

From _Easyriders Magazine_

ANIMAL SEX LIFE

by Don Sharp

Cross-country bikers who travel cuntless usually discover that to leave one nagging problem behind simply leaves a throbbing one in front. Fotunately, America's farmlands provide an abundance of domestic livestock tha can be exploited to reduce the swelling. The biker who uses such means may know that he is practicing a tradition sufficiently ancient to have been denounced by Moses.

Unfortunately, sex manuals neglect this dimension of sexual practice. They tell how it's done in a dozen countries, of acrobatic positions, of how to use cunt juice as a sauce for roast squab, but tell nothing of shagging animals. The following treatise may well be the first of its kind. Hopefully, this pioneer work will stimulate public discussion of animal-fucking. Perhaps someone will initiate a monthly journal devoted thereto, complete with centerfolds, advertisements for helpful apparatus, and a question-answer column (which the author hereof, being the only one qualified, volunteers to write). Further, the author hereof swears on a greasy chop manual that the lore presented herein has been gathered from years of attendance to the dis-course of plowboys, mule-skinners, swineherds, chicken thieves, and others of like ilk, well qualified to instruct. Henceforth, no biker should begin a cross-country run without taking this copy of Easyriders along for guidance.

Given the brevity of this guide, only the rudimentary procedures appropriate to common domestic livestock can be outlined. Exotic foreign species such as the yak or alpaca and wildlife such as bears and moose are excluded, as are dogs, these topics deserving treatises to themselves.

To consider cows first. Cows are basically nervous. They're like the prick-teasers of the 50's who would bat their eyelashes, lean over to show their boobs, flounce their skirts to show a beaver, and then shriek like hell if some bothered dude tweaked a tit. Cows can be attracted by a handful of cottonseed meal, a piece of bread (preferably whole wheat), even a bunch of grass. They will hang around, switching their tails to show off their

cunts, then get jumpy and run off as soon as the cow-screwer gets serious.

Therefore, to fuck a cow requires that it be immobilized, a fact long recognized in rural architecture. As long as milk-maids did the milking, it was done in the open, the cow being kept in place by a bucket of eating goodies. With the development of large dairies, men took over and the barns built to shelter milking were cleverly contrived to assist cow-screwing.

The cow was headed into a stall, its head locked in a stanchion, and hobbles added according to the disposition of the cow and the agility of the cow-shagger. Posts ran up to support the roof at the cow-ass end of the stall, these posts being connected by horizontal 2x4s. The 2x4 presumably provided a place from which to hang milk buckets, stools, hobbles, and so on, but was, of course, carefully placed for cow-shagging, its height indicating the favorite technique. If about a foot above a man's reach, the cow-fucker leapt up, hung from the 2x4, and swung in to hook his heels in the cow's flanks, from which position he could achieve suitable intromission, regulating the stroke with his legs.

Were the 2x4 only slightly above head-high, the screwer clambered over and hung by the armpits. He poked the cow in the ass with a toe and when the cow switched her tail, he grabbed it in both hands, placed feet athwart hamstrings, and by pulling on the tail and heaving with the feet, could effectively achieve his purpose. This latter method lacks the passionate violence of the former, but suggests the method for the itinerant biker who must make do without the niceties of dairy barns.

Having found a cow, enticed it into grabbing range, and tethered it to a fence post, the biker goes behind, removes his boots, and gets his inner tube out. He grasps the tail, catches one ham-string between big toe and the next (like a shower thong), heaves up, catches the other hamstring, and begins to ream properly.

Unfortunately, cows have two serious faults. First, they'll shit all over you. You can't even fool them into dumping first by gigging them with a ratchet handle. The cow waits till the humper starts driving in to finish, then lets out about a gallon of slurpy, green cowshit. The poor, fucking bastard will splash it all up his shirt and get his pants full, and be grateful that he took his boots off.

Second, a cow is an indifferent piece, somewhat like thigh-fuck-ing a flabby, lard-loaded, ass-drooping fat woman; that is, hopelessly loose, ill-defined, and unresponsive, like screwing a plastic bag of warm Jello. Calves are some improvement, but their common diarrhea-like ailment known as "scours" renders them totally unfit. Yearlings are best, like median-age women, less full of shit but not yet become vindictive. As a final note, the

beef breeds, Angus and Hereford, are most tractable. Of dairy breeds, Shorthorn and Brown Swiss are preferred to Holsteins, which are especially likely to shit, and to Jerseys, which are just too damn nervous.

Horses are better than cows. Like some women, if you can get close enough to talk to them, you can probably screw them. Also, like women who must be taken to dinner or who get hot giving head, they can be seduced by edibles, preferably raisins. Sugar cubes are used only in kids' stories. A horse will stand still to be fucked, but won't tolerate any messing with its tail or feet. Hence, cow technique will not work, and a horse-fucker must have something to stand on. Traditionally, horses were "stump-broke"; that is, trained to back up to a stump, presumably to aid a bareback rider to mount and dismount, but, in fact, to assure cooperation when the plowboy wanted a piece. If biking in a group, members can support each other in turn. Else, the horse can be backed up to a parked scoot, provided it has cooled. Horses don't like hot, greasy metal smells.

A horse gives a good fuck, if a frustrating one. The big ass interferes with getting in deep, and while it's warm, firm, and confining, the horse fucker senses a tremendous amount of unused cunt that he simply can't reach. Guys uptight about their bore and stroke shouldn't screw horses.

Hasty fuckers will prefer goats, the most convenient of all animals to screw. An adult nanny stands just high enough for a bent-kneed fuck and the tail flips up as soon as the goat feels something poking at its snatch. A nanny gives a good fit and puts up no objections. In fact, that's what's wrong with goats. They just don't care. A goat can take on a whole bike club and chew its cud the whole time. A cow gets nervous like something wild is happening; a horse gets comfortable, like it digs what's happening; but a goat, like a Tijuana whore paid in advance, doesn't care whether anything is happening.

Sheep, though, are one of the choice pieces among quadrupeds, a fact long known (and kept suppressed) by shepherds. Like the girl next door, sheep want the fucker to be friendly, kind, and just aggressive enough to do the job, and they give back a fair fuck in return.

A cartoon in _Easyriders_ (January '75, page 50) illustrates a pair of bikers screwing some sheep by a method that would work only with an oversized Rambouilett ewe or with very short bikers. Also, anyone who used the naive technique illustrated would spend most of his time chasing the sheep around the pasture. To properly screw a sheep, pull your pants legs up above your boot tops, hoist the sheep by the tail, and drop its hind feet into your boots. With the sheep thus elevated and secured, the trousers can be lowered and milady enjoyed.

The sheep will look over its shoulder a lot; hence, the idea that one must kiss a sheep, a notion that has led some authorities to urge a sheep-superior position, i.e., biker supine, sheep's forelegs astraddle his chest, etc. The idea is just plain silly. A sheep doesn't give a rat's ass whether you kiss it or not. Sheep do groove on sniffing each other's asses, so a foul-breathed sheep-fucker can blow some her way. However, it's hardly a necessary gesture; sheep certainly don't insist on it.

Now, while a sheep is a good piece, it may, unfortunately, have VD, either clap or syph. Indeed, some medical historians believe VD came to people from sheep. Sheep-fuckers should avoid any that are obviously dripping foul stuff, and should carry protection for others. Rubbers, "sold only for the prevention of disease," are readily available, and if not, a prophylactic buffer of grease can be applied to the moving part. Vaseline is a virtual standard, but wheel bearing grease will do as well. Some users report gratifying results with coarse fibre grease, while others say a rapid stroke requires a proper high-speed lithium-base grease with molybdenum additives, and yet others insist on vegetable-base lubricants, since petroleum-base lubricants form carbon under heat and pressure, wherefore the sheep-fucker may withdraw his pushrod to find it coated with black, carbonized grease that requires repeated applications of Gunk or, worse yet, steam cleaning to remove. Given the potential difficulties, a sheep-fucker should carry rubbers.

Though easy to screw, sheep are stupid. You can't develop a meaningful relationship with a sheep; hence, the notorious promiscuity of shepherds. The animal that demands personalized cuddling and which returns affection with an excellent fuck is a pig.

The pig-fucker must enter the sty casually, like cruising at a party, as if getting laid were the last thing on his mind. He must greet each sow and give a scratch or two. Once he has chosen one, he must devote full attention to her. He kneels on one side and scratches behind ears and down the snout with one hand while the other hand scratches along the back and sides until reaching the tail, at which point the first hand works back and sides while the other hand goes under the tail to rim the cunt. Thorough courtship involves finger-fucking to assure the sow is ready.

Meanwhile, the pig-screwer must gently ease the sow into a corner of the pen, thus to inhibit her lateral movement. Any movements she can make will be agreeable fore-and-aft motions. Once she is cornered and finger-fucked into readiness, the biker inserts his rod. However, he must not slacken his caresses. If the sow thinks she's being taken for granted, she will sit down. And if the other sows see that, you'll never get screwed in that pigsty. A pig will not cooperate with a fucker who thinks she's too easy.

A pig is an even better piece than a sheep, and a well-fucked sow will grunt appreciatively. Opinions differ, though, on whether a pig is best of all. One ancient declared wistfully, in his impotent dotage, that "I've fucked just about everything, but I always liked pussy best." Asked about "second best," he replied at once: "A chicken."

The old man knew his fucking. If a pig isn't second best, a chicken is. A hen doesn't need much petting, but she does need to be talked to. Some authorities view this talk as like that used on those women who will be divested of garments and shagged in every position as long as the word "sex" is never uttered. Others view it as the "sweet nothings" that add their own dimension to getting laid. Either way, you've got to talk to a chicken.

The approach begins with the chicken-fucker getting down on all fours to establish eye contact (while avoiding inadvertent hand contact with chicken shit), and saying "kuh-kuh-kuh." That's the basic line, but it can be varied to "keh-keh-keh" or "kee-kee-kee," if uttered in tones of sincere passion and devotion. Don't, however, say "chickey-chickey-chickey," for that's how farmers call chickens. To a chicken, it sounds like an order, which is a turn-off.

Once a chicken comes close and begins to respond to the small talk, a hand goes under its breast and belly and the hen is lifted up. Once its feet lose purchase, a chicken will sit still. However, the chicken-fucker must keep talking as he gets his cock into place. Don't be offended by the thought that a chicken's asshole and its cunt are functionally the same aperture, of which only one is provided. The chicken isn't going to apologize for it, and certainly, among humankind, the former has been taken for the latter often enough and the fucker never the wiser.

As with a porcupine, a chicken must be screwed carefully. Even allowing for the exaggeration of bike-club boasting, your average Rhode Island Red can't accommodate more than half the average biker's cock, a Leghorn no more than a third. However, as anyone who has watched an egg being laid knows, that half or third can enjoy some extraordinary hospitality.

The old fucker quoted earlier added a note on how chicken-screwing could be elevated to the sublime. "Just as you go off," said he, "you cut its throat. That last, dying quiver..." This refinement presents the biker with a dismaying choice. To cut the throat of the chicken he has spoken to so intimately, the hen he has cultivated so carefully, seems to border on murder; to kill for mere lust seems gross beyond mention. Yet, one has not properly fucked a chicken unless one goes all the way.

Rural tradition did not view the matter as morally reprehensible. Usually, when the family got home from church, the farmwife sent a twelvish son to fetch a chicken for Sunday dinner. Son fucked the chicken before killing it, and enjoyed the dying quiver as a concomitant to obeying his mother's orders. The biker, then, can resolve the moral dilemma simply by taking the chicken along for roasting over the campfire. Any further doubts can be obviated by recalling that to spare the chicken may only mean its ultimate delivery into the fatal custody of Colonel Sanders.

In cutting the chicken's throat, the knife should be placed behind the neck and directed forward and down. To cut from under and upward may result in a facefull of chicken blood that severely distracts from that exquisite dying quiver. If buddies help, they can see to the cutting while the fucker concentrates on the quiver.

More could be said, of course, but as most readers hereof will be novices at animal-fucking, they should concentrate on mastering the fundamentals outlined here before attempting creative variations. Even the elementary level of animal-fucking will provide the cuntless biker's rigid stroker with solace superior to that available from a grimy hand.

----------end of article----------

----------comments by original poster----------

My three previous postings make up the full _Easyriders_ article as published. I have no idea if there were any follow-up articles or interesting letters to the editor in later issues of the magazine.

Much of what the article describes I know to be true, based on testimony from guys I know. For instance, cows will indeed dump on the guy who's "shagging" them. That's not necessarily a problem, though -- some people like cow shit. :-) And yeah, a guy really can hook his toes on a cow's hamstrings and stand on her hocks. The term "stump-broke" is genuine.

There's lots of stuff the article leaves out. No mention of men having sex with male animals, probably because of the article's target audience. No mention of coupling with the animals while they're lying down, which obviates the need for tethering or other restraints. No mention of one of the things that horselovers swear by -- the "winking" of a mare's vulva during intercourse. No mention of oral sex, either.

The author states that his article is meant as a guide to "cuntless bikers" -- men who (at least at the moment) have no woman lover, and who might want to satisfy their sexual desires with an animal partner. I don't know any animal-lovers who are motivated in this way. The guys I know do not have sex with animals because it gives them a warm hole to poke in the absence of a woman

-- they have sex with animals because they love animals and think animals are sexy. Sex with animals is not, for them, a _substitute_ for sex with another human; it's something they enjoy regularly in addition to or instead of sex with humans.

I should also say, I don't know (nor do I know of) any animal-lovers who have sex with chickens or any other fowl. All the guys I know who are into animals are "four legs and a tail"-men.

----------end of everything----------

Well, I'm sure many hams have said things like that, so I'll just stipulate that such things were said. I don't think that it constitutes broadcasting, any more than when WB0CXJ talked to FRG9600 (an SWL and webmaster), or when Vic says "Good night Mrs. Calabash, wherever you are."

With all good wishes,

Kevin, WB4AIO.

So you're saying that city/county/state penal laws can take precedence
over the First Amendment. You believe that amplified audio frequencies
are exempt from the First, but amplified RF should in no way be exempt.

You're dismissing this example too quickly, Bob.

Why limit it to HF? Repeater ID's can be code-only too.

FIrst of all: Wrong NG. FRS and GMRS are not amateur radio. GMRS is
licensed, class A CB, so "rec.radio.cb" may be appropriate if there's no GMRS
specific NG.

Secondly, have you looked at the frequency allocations for FRS and GMRS? Note
the overlap?

4160. AF2Y apologized to WA4KBX

Newsgroup: rec.radio.amateur.misc
Date: 2000-02-08 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <87pb8e$325$1@nntp2.atl.mindspring.net>
Source record: 119612

To the thousands of well wishers out there who've sent congratulatory telegrams, e mails and made phone calls regarding my on-the-air apologies to Joe, WA4KBX, I want to thank you publicly. The entire matter was taken out of context since it appeared that some of the never-to-be rehabilitated StumpJumpers, i.e. the lost souls had been making hay with it in a futile effort at winning the gullible over to their side. The somewhat caustic and regrettable comments made about Joe's habitat were solely my responsibility while it must be understood that Fred Roll said absolutely nothing demeaning. In fact knowing Fred as I do, I can safely say that he was delighted in knowing that Joe would have put up his carcass for the night.It's more than I would have done. But jocularity aside, for an unexplainable reason other than the fact that Joe called me a "Christ Killer" which is ridiculous, inflammatory and prejudiced, I took a dislike to the man which I feel went overboard. Seemingly he felt I was anti South which also is untrue because my daughter married a gentleman from below the Mason Dixon Line and my son graduated from a southern law school. Furthermore when I vacation I head south not north and did you ever hear of a southerner retiring in the north? To go from the Sun Belt to the Trousers with Holes? Fuggetaboutit. And so the issue is history. Joe has no roaches in his trailer and Fred even remarked that he has an exquisite one to boot, not a roach, a trailer. I hope that some of you would speak to Joe to convince him to accept my apology to enable us to move on to a brighter future sans friction. It's time the war on the Internet and ham radio stopped and I'm doing my best to end it. Dan,W4NTI and Bill, K0ECK are right-enough is enough and hopefully when Riley shleps off the air Polly, Queenie, David and some other hetzers, peace and tranquility shall reign. In the meantime, how about some of you e-mailing Riley to ask for a moratorium on present day censure? WB2OTK has been off the air long enough and we all can benefit from his wit and wisdom. Riley should give the guy a break rather than see Rich sell out and get out. Looking forward to better days on 20 meters, I remain
Yours fraternally,
Doc,AF2Y

4161. AF2Y and DIVERSITY

Source record: 119613

Don't you people understand that for a democracy to work, there must be opposing viewpoints? And why is a Conservative necessarily a Republican while a Liberal a Democrat? Many of our Senators and Congressmen represent a potpourri of both while still voting one specific way or the other. The big change in American politics occurred right at the end of the Reagan years. Ronnie was dynamic and exactly what we needed after Jimmy Carter was giving the commies the world from Jan.20,1977 to. Jan.20,1981. And I voted for Carter because I felt that Gerald Ford was a klutzy jerk who was going to knock his head to death on airplane doors. Was I a Democrat, a Liberal in 1976 when I pulled the lever for Carter. No. And was I then a Conservative Republican when I pulled the levers for Reagan in 1980 and '84? No. I was a concerned American who was seeing and fearing communist expansionism everywhere and felt that Ron would stop it and he did. So then what's causing the polarization today in our country? Why all the nastiness between Liberals and Conservatives? Because of the insidiuosness of the Christian Coalition which grabbed on to the coattails of the Republican party and has been dragging it down to destruction ever since. Abortion should be a POLITICAL ISSUE? Are you mad? Of course not. We have a myriad of problems both social and economic which must be addressed and we don't need to be sidetracked by those who'd mix religion with politics. Abortion must be left to personal choice and the clergymen and kept out of the political arena and when either McCain or George W. state so as fact, then either will become awesome in November 2000. Once the G.O.P divests itself of the religious monkey on its back, America will see a very close race which might very well swing to the elephant.

Good proof of the axiom that both are bankrupt, corrupt ideologies that have everything to do with imposing oneself on others, and nothing to do with morality, truth, or efficacy. Both of them stink.

Umm, I believe we were discussing amateur radio.

> > Or are expectations about your ability to achieve
> > rather low?

> Expectations are high, achievement is high. Ability, however, is average.

In amateur radio, these parameters would be inconsistant with the
observed phenomenon. :-)

I have scanned ALL of KC8JBO's credit history onto a page at Homestead.com

I'm going to "hype" this fact to all the news groups & any other places on the web 'till I release the page's address for the general public to view the page at.

KC8JBO sure has some credit history questions to answer. THE BEST IS YET TO COME!!!!

Kick it up a notch,

What is missing here? Why would a special agent go the home of some old middle class ham radio operator who frequents a location on twenty meters inhabited by retired old prunes with mental illness and tell him not to talk to a certain other old fool? Are these my tax dollars at work? I suspect there is more to this story and its better that ZQ's story about the demise of his homosexual friend when he worked for IBM..

You are so ignorant that you do not know that it is a federal law to pose as a Medal Of Honor receiver. But the Medal Of Honor does not mean much to you it is obvious. And for your information the FBI agent did go to Docs house, I know that for a fact!!

Just in!

The OEM power connector end that goes to the voltage source. Also the OEM
HF connector that goes to the voltage source.

Finally you can make your own cables.
